When the parent scale is major sharp five, the “#5” tone can function as “b6”, making the VII chord a diminished seventh. VII dim7 - II dim7 = IV dim7 = bVI dim7.

For use on VII type chords (minor II type chords, where VIm is being established as the key), practice VIIIm11b5b9. For use on III dominant type chords (V chords, when VIm is being established as the key), practice VII dim7 arpeggios.

VIIIm11b9b5 is a useful arpeggio but not an acceptable chord

The seventh chords built on major scale tones seven, the VIIIm11b5b9, is not an accepted chord, but it can function as an arpeggio. It is especially effective before a III7 type (III dominant seventh, with a major third). VIIIm11b5b9 = V13 no root.

V13 fretboard illustrations

The highest note in each of these is the scale tone "3".

Beginning with V13, progressively remove the bottom note to get VIIIm11b5b9, IIm9, and IVma7:

V13 (C13) = 5724613

V13 no root is VII(E)m11b5b9 = 7-2-4-6-1-3

You won't see VIIIm11b5b9 used as a chord, but it is usable as an arpeggio.

VIIIm11b5b9 no root is IIm9 (Gm9) = 2--4-6-1-3

IIm9 no root is IVma7 (Bbma7) = 4613

There are many synonyms, making substitute chords.

The synonyms are based on V13 no root and VIIIm11b5b9 (which have the same notes); Gm9 and Bbma7/6 (same notes).

The Phrygian Family

Phrygian minor

Phrygian major (Phrygian dominant)

The III7b9 and III augmented arpeggios are the basis of the Phrygian major family. When the key is established on VIIm, III7b9 and III augmented become V7b9 and V augmented. Practice them throughout the fretboard.

Phrygian major and Lydian dominant are modes representing altered dominant chords built on the fifth of the target chord.

See [Modes Of Four Heptatonic Scales](#) and [Harmonic Minor Cadences](#).

major sharp five makes III Phrygian major

The red “3” is the V of the blue “6” the harmonic minor tone center.

Be careful to ascend in thirds:

super Locrian

Super Locrian is Locrian mode with a flatted fourth that can proxy as (act as) a major third. It can be harmonized as a “Swiss Army seventh chord”: a dominant seventh chord with sharp and flat five and with sharp and flat nine. The scale ascends from its tone center in a half-whole-half step sequence (1-b2-b3-3), followed by five notes in whole steps up to the next octave tone center (3-b5-b6-b7-1)

Dorian sharp four

Dorian sharp four is equal to Lydian dominant with flat three. It is mode II of major sharp five and is mode IV of harmonic minor. Dorian sharp four can be used as a darkened version when Lydian dominant is a key scale. It can also be combined with Lydian dominant by generally ascending from to flat three with Dorian sharp four and generally descending from one to natural three with Lydian dominant.

Harmonic Family Solo Studies

two-note minimalist theme on 1 and 5

Swing Eighths

System 1: F7, Bb7, F7, Cm7, F7

System 2: Bb, Bb7, F7, Em7(b5), Am7, D7

System 3: Gm7, C7, F7, Gm7, C7

two-note minimalist theme on 6 and 1

Swing Eighth

First system of musical notation for the "two-note minimalist theme on 6 and 1" in Swing Eighth style. The system includes a treble clef staff with a key signature of one flat (Bb) and a 2/4 time signature. The melody is written in eighth notes, with a 3/8 note triplet in the final measure. The bass staff shows the fretboard positions for the melody, with fingerings indicated by numbers 1-10. Chord symbols above the staff are F7, Bb7, F7, Cm7, and F7.

Second system of musical notation. The treble staff continues the melody with a 3/8 note triplet in the final measure. The bass staff shows the fretboard positions for the melody, with fingerings indicated by numbers 1-10. Chord symbols above the staff are Bb7, Bb7, F7, Em7(b5), Am7, and D7.

Third system of musical notation. The treble staff continues the melody with a 3/8 note triplet in the final measure. The bass staff shows the fretboard positions for the melody, with fingerings indicated by numbers 1-10. Chord symbols above the staff are Gm7, C7, F7, D7, Gm7, and C7.

Improv on Blues In F with Cm13 and F13

Playing over jazz blues in F, such as “12-7362514 in F layer 1 blues” in All Favored ireal

Practice Cm15 with C Dorian (Bb major, tone center “2”) and F13 with F Mixolydian (Bb major, tone center “5”) and use them throughout with two important changes: in bars 2, 5 and 6 use F Mixolydian with b3 (“Ab”); in bars 9, 10 and 12 use C Dorian with a natural third.

use a simple basis

Think in C Dorian (resolving to F), F Mixolydian, F Mixolydian with a b3 (F Dorian) or F Mixolydian with a natural 7 (F major). That way, you are primarily thinking C Dorian or F Mixolydian.

F Mixolydian with b3

Bars 1-4, 7-8 and 11 are primarily F7. Generally, use parts of Cm13 resolving to F7 or F Mixolydian.

In bars 2, 5 and 6, be sure to flat the “A” note, which is the third of F. On the harmonic family charts, F is “5”, so flattening A would be b7. Think F Mixolydian with “Ab’s”, making F Dorian. Since the parent scale is Bb major, flattening the seventh would make Bb Mixolydian, but it is probably better to think of it as F Dorian, so you’re thinking of fewer scales.

Treat B dim 7 largely like Bb7, thinking of it as a chromatic connecting chord in the accompaniment that you are not representing.

F Mixolydian with optional F#

Treat bars 7, 8 and 11 as F7, or use any of the following options. nGenerally ignore the Em7b5 chord, thinking of it as a connecting chord in the accompaniment that you are not representing. The Am7 will sound as Am7b5 if you use F13 and F Mixolydian over it, since Am7b5 is part of F13 and F Mixolydian. D7 will sound as Dm7 = F6, unless you want to sharp the F note, making F Mixolydian sharp 1.

C Dorian with natural three

Bars 9, 10 and 13 can be thought of as C Dorian with a natural third (“E” natural). This sounds the C7 chord, the more important of the two (Gm7 and C7).

Learn Melodic Cell Types Well, Learn to Abstractly Combine Them

On each tone of a harmonic family arpeggio (see major scale harmonic family fingering.pdf), practice all one melodic cell type, then (separately) practice another melodic cell type. Then alternate between the two. After practicing cell types separately and alternating in pairs, alternate between three types. Then free associate between three or more melodic cell types and abstractly modify them.

Begin with these two types, each separately first

1235 and 1345 from each chord tone of a ninth: on a triad built on its root, third and fifth.

triads with two chromatics below each chord tone

Then play 1235 and 1235 on triads in perfect fourths, emphasizing the triads that are part of a larger chord version of the current chord.

Take your time with each melodic cell type. First learn it in a familiar form, like E form. One fingering type at a time, learn the fingerings for a cell type all over the fretboard, with the little finger on the root (sometimes substituted with the ring finger), a middle finger on the root (middle or ring fingers) or with the index finger on the root.

ONE OCTAVE SHAPE AT A TIME

Target Chords and Setup Chords

A *target chord* is preceded by one or more chords that lead to it in a familiar fashion, establishing a temporary or permanent sense of key on the target chord. A *setup chord* is the chord played immediately before the target chord, that leads to and resolves on the target chord.

Here is a table showing the keys of target chords and setup chords. Remember, target chords have a major or minor basis and setup chords can be on V or bII in the key of a target chord.

target chord	C	C#	D	Eb	E	F	F#	G	G#	A	Bb	B
setup on V	G	G#	A	Bb	B	C	C#	D	D#	E	F	
setup on bII												
	Db	D	Eb	E	F	Gb	G	Ab	A	Bb	B	C

I avoided double flats for the setups on bII. If your target chord is C# minor, no problem. The bII would be “D”. In major, Db major is the more common version of the enharmonic equivalents C# and Db. In Db major the bII would be Ebb (E double flat), an awkward note to think. G# works fine as a minor key target, with a “A” as bII. G# major is only a hypothetical key that would have an F## (F double sharp). G#’s bII would be A, but there’s that annoying F##, making the scale pretty unusable.

Take Your Time

Fleuency in this type of improvisation takes a while. You need to memorize melodic structures involving arepeggio subsets of harmonic minor and melodic minor scales that have complex relationships to the key of the target chord.

start with the E form octave shape of the target chord

To play a setup chord structure to precede a target chord in the any particular octave form, the root of the setup chord will *not* be the same note as the target chord (of course). The root of the setup chord will be on the V or bII of the target chord. If it is on the bII of the target chord, the root of the setup chord will usually be in the same octave shape as the target chord.

TONAL LAYERS AND TARGET TONES

Tonal Layers

From the tonal perspective (in regard to the notes played), music is conceived by both the listener and improviser in a multi-dimensional fashion. There are two main layers: the key layer and the chord layer.

In the key layer, the key is depicted by constructing melodies and other musical parts primarily with scales named after the key. Chords progress toward the tonic chord (the chord whose root names the key) through tension and release and other compositional devices that provide the expectation that the song will end on the tonic chord.

This Chapter Focuses on the Fretboard

We are conceiving multiple layers of music such as one chord progression superimposed over another (see *Melodically Superimposed Cadences*) or a chord being a subset of a scale. The context in this chapter is the fretboard. We are trying to visualize the multiple layers of music on the fretboard.

Target Tones

As the improviser, *you* define key scale types for the key layer and *you* define the chord types for the chord layer. *Target tones* are those notes common to the current key scale and the current chord. They are the tonal core of your melody. It is best to practice each key scale and the arpeggio for the chord as you depict it in the chord layer. Then, the most important thing you can do in improv development is to practice the notes common to both, the target tones.

In the chord layer, the melody resonates each chord during its period, but without losing reference to the key. Some of the best tones to use melodically are those that are in both the current chord and the tonic chord. The current chord can be represented by notes that are in it or pleasing added harmonies to the chord, such as adding a sixth or seventh to a triad (the triad would typically have the numbered tones “1”, “3”, “5”).

Multiple Chord Layers

Commonly, the chord type depicted by the accompaniment players is not exactly the same as the chord type depicted in the melody. The comping (accompaniment) chord layers may have more or fewer chords per period than the melodic (improv) chord layer. During Dm7 and G7 in the comping chord layer, the improv chord layer may depict G7sus.4 and G7, respectively. Or, during G7 in the comping

chord layer, the improv chord layer may depict Dm7 and G7, or the improv chord layer may depict Dm7 and Db7 (a [flat five substitute](#) for G7).

There may be multiple accompanists, each producing a slightly different chord layer. Chords can be conceived in families, where multiple versions of chords can be compatible. There also may be multiple improvisers (simultaneously), where they also produce multiple melodic chord layers.

The comping and improv chord layers will have the same primary chords, but may connect them in different ways. Listeners have become very flexible in this manner, since so much has been done in jazz and pop (especially since the sixties, with influences like Lennon and McCartney).

Chord Tone Targeting Procedure

Generally move by scale step, accenting current arpeggio tones every four to six notes on the beat, such as eighth notes accenting on beats one and three in 4/4, on the first beat in 3/4 or on the first beat in 6/8.

A target tone is the first note at the beginning of a chord, commonly on the first beat. A setup tone is the last note before a target. A scalar setup is a consecutive series of two or more scale tones before a target tone. The last setup tone is ideally an upper or lower scale-tone neighbor of the target tone. If the last setup tone is a chord tone of the same chord as the target tone, it doesn't have to be a neighbor tone of the target, but you usually want to move to the target with a small interval.

solutions where the target is not a step away:

- ✦ skip to a chord tone of the target tone's chord
- ✦ change the setup tone by a skip to a neighbor of the target tone

solutions where the target and the setup are the same note:

- ✦ change the last setup tone to a neighboring tone.
- ✦ shorten the time value of the last setup tone and insert a neighbor of the target after it.
- ✦ trade the last two setup tones.
- ✦ insert a chromatic

HARMONIC CLUSTERS

Core melodic tones are those common to the chord and scales being used for improvisation. I call them *duality tones*, since they are common to two things: the current chord and the current scale. You can read further on this subject in [Tonal Themes And Schemes](#).

triad arcs

Looking at the core melodic tones in an area of the fretboard with the clusters of scale tones around them can be very powerful in developing your improvising. For example, focus on three strings of one of the arcs shown on the following pages of major scale line structures. Determine which major scale the chord progression you are working on uses and determine the number of the scale step on which the chord is based. Emphasize the tones of the current chord and use the surrounding notes as neighboring tones.

Triads as a Harmonic or Melodic Basis

Triads can be a structural basis to your comping or soloing. See Chord-Naming Conventions/[Triads](#) and [Thirds](#). During a single chord, use any of the seven triads in its [parent scale](#), emphasizing those in the current chord, de-emphasizing ones not in the current chord and creating tonal and stylistic environments for any that you dwell on.

The parent scale can be substituted with one that darkens the mood by chromatically lowering major or perfect intervals, such as Dorian flattening the third of Mixolydian. This is the basis of the American blues harmonic/emotive expression.

Where it won't cause too much dissonance, the opposite can be done, the mood can be brightened by using chromatically raised versions of notes in the parent scale, such as Mixolydian for Dorian to brighten the mood. Such cases, make the accompaniment seem to be darkening notes, where in fact, it was the melody that raised notes.

Secondary dominants change minor chords to major or dominant or change major, major sixth or major seventh chords to dominant seventh chords, so they will progress more strongly to the chord they precede. See [Secondary Dominants](#). As dominant sevenths, they will more strongly progress to chords rooted a perfect fourth higher. For example, II^{Im}, III^{Im} and VI^{Im} chords are changed to dominant seventh with a major triad basis, to respectively move. They are typically dominant sevenths, with a major triad basis.

One, two or all three of the notes in the triad can move up or down the parent scale:

one moving voice

modal triad improv and cluster playing

Double Stops and “Triple Stops”

Double stops are the most common use of two or three notes (technically “triple stops”, but usually also called double stops) in improvisational styles. See the separate document on the subject: [Double Stops](#).

Secondary Roots

Chords used in jazz usually contain four or more notes and are typically built with every other note of a seven tone (heptatonic) scale. The same cycle of tones, numbered 1-3-5-6-2-4-6-1-3, etc., is used for any step of the scale to build a chord.

With seventh chords, using four notes in that cycle, a Ima7 chord is 1-3-5-7, a IIIm7 chord is 2-4-6-1, a IIIIm7 chord is 3-5-7-2, and so on.

Larger ninth chords use five notes in the cycle. Ima9 is 1-3-5-7-2, IIIm9 is 2-4-6-1-3, and so on. Ninth chords are only acceptable built on steps I, II, IV, V and VI of the major scale. Those on III and VII are currently considered to have an unacceptable dissonance. Eleventh chords have six notes, constructed in the same every other note pattern. All currently accepted chords can be studied in [All Scale-Tone Chords](#).

secondary roots on the third, fifth and seventh

Any of these chords of four notes or more have subsets. A ninth chord built on step I is Ima9 and contains 1-3-5-7-2. 1-3-5 is a I major triad. 3-5-7 is a III minor triad. 5-7-2 is a V major triad.

Rarely, a secondary root can occur on the seventh. It happens on a suspended thirteenth chord. Bb major seventh (Bb-D-F-A) is the upper part of a C13 sus. 4 chord (C-G-Bb-D-F-A).

secondary roots on the sixth

A sixth chord is acceptable on steps I, II, IV and V of the major scale. In each case, the chord is a triad with an added scale tone two steps down from the root. I6, for example is scale tones 1-3-5-6. On the sixth of that chord, a subset triad exists, which is 6-1-3 and is the same as a VIIm triad. Likewise, a VII diminished triad is built on the sixth of IIIm6, a IIIm on the sixth of IV6 and a IIIIm on the sixth of V6.

Read more on this subject in [Substitution](#).

Harmonic Clusters, Conceiving Seven or More Notes at a Time

Few guitar players use three or more notes at a time in free improvisation, although it is common in jazz piano improv. It doesn't have to be that way.

Stick with each major scale line until you know the major scale fingering well enough to conceive seven or more notes at a time by working a while on three strings until you can visualize all of the notes on those three strings *at once*, not just as a scale. This is easier to visualize on the piano, but we can learn it, too.

Major Scale Line 5 Structures

Triad, Pentatonic And Major Scale

Diagram showing the Triad, Pentatonic, and Major Scale structures for seven chords: I, II^m, III^m, IV, V, VI^m, and VII^{dim}. Each structure is represented by a 5-line staff with notes and fingerings indicated.

I: Notes 4, 7, 3, 6, 5, 1, 4, 2, 5, 6, 2, 5, 1, 3, 6, 4, 7.

II^m: Notes b3, 6, 2, 5, 4, b7, b3, 1, 4, 5, 1, 4, b7, 2, 5.

III^m: Notes b2, 5, 1, 4, b3, b6, b2, b7, b3, 4, b7, b3, b6, 1, 4, 5, 1, 4, b7, 2, 5.

IV: Notes #4, 7, 3, 2, 5, 1, 6, 2, #4, 3, 6, 2, 5, 7, 3, 1, #4.

V: Notes b7, 3, 6, 2, 1, 4, b7, 5, 1, 2, 5, 1, 4, 6, 2, 2, 5, 1, 4, 6, 2, b7.

VI^m: Notes b6, 2, 5, 1, b7, b3, b6, 4, b7, 1, 4, b7, b3, 5, 1, b6.

VII^{dim}: Notes b5, 1, 4, b7, b6, b2, b5, b3, b6, b7, b3, b6, b2, 4, b7.

Triad Arcs

Diagram showing the Triad Arcs for seven chords: I, II^m, III^m, IV, V, VI^m, and VII^{dim}. Each structure is represented by a 5-line staff with notes and fingerings indicated.

I: Notes 4, 2, 5, 7, 3, 1, 4, 5, 1, 4, 2, 5, 6, 2, 5, 1, 3, 6, 1, 4, 5, 1, 4, 7, 3, 6, 2, 7, 1, 4, 5, 1, 1, 4, 5, 1, 2, 5, 1, 3.

II^m: Notes 4, b7, b3, 1, 4, 2, 5, b3, 5, 1, 4, b7, 2, 5, b3, 6, 2, 5, 1, 6, b7, b3, 4, b7, 1, 4, b7, b3, 5, 1, 1, 4, b7, b3, 5, 1, b3.

III^m: Notes b2, 4, b7, b3, 5, 1, 5, 1, 4, b6, b2, b3, b6, b2, b7, b3, 4, b7, b3, b6, 1, 4, 5, 1, b7, 5, b6, b2, b3, b6, 5, 1, 5, 1, b7, b3, b6, b2, 4, 1, 4.

IV: Notes #4, 7, 3, 5, 1, 2, 5, 1, 6, 2, 3, 6, 2, 5, 3, 1, #4, 7, 3, 6, #4, 5, 1, 2, 5, #4, 7, 6, 2, 5, 1, 3, 6, #4, 7, 3, 6, 2, 7, 1.

V: Notes 4, b7, 2, 5, 2, 5, 1, 3, 6, b7, 3, 6, 2, 1, 4, b7, 5, 1, 1, 4, b7, 5, 1, 2, 5, 1, 4, 6, 2, 3, 2, 5, 3, 3, 2, 5, 3, 4, b7, 1, 4, 5, 1, 4, 2, 5, 1, 4, 2.

VI^m: Notes 4, b7, 2, 5, 4, b7, 2, 5, b3, b6, 2, 5, 1, b7, b3, 6, 4, b7, 1, 4, b7, b3, 5, 1, b3, b6, b7, b3, 2, 5, 1, 4, 2, b3, b6, b7, b3, 4, b7, b3, b6, 1, 4, 5, 1.

VII^{dim}: Notes b2, b5, b7, b3, 4, b7, b3, b6, 1, 4, b5, b5, b2, b5, b3, b6, b6, b2, b5, b3, b6, b7, b3, b6, b2, 4, b7, b5, 1, 4, b7, b3, b2, b5, 1, b3.

Ninth And Seventh Arpeggios

Diagram showing the Ninth and Seventh Arpeggios for seven chords: I^{ma9}, II^{m9}, III^{m7}, IV^{ma9}, V⁹, VI^{m9}, and VII^{m7b5}. Each structure is represented by a 5-line staff with notes and fingerings indicated.

I^{ma9}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 3, 3, 3, 3, 4.

II^{m9}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 4, 3, 3, 3, 4.

III^{m7}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 3, 3, 3, 3, 4.

IV^{ma9}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 4, 3, 3, 3, 4.

V⁹: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 3, 3, 3, 3, 4.

VI^{m9}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 4, 3, 3, 3, 4.

VII^{m7b5}: Notes 1, 1, 1, 1, 2, 2, 2, 1, 1, 4, 4, 4, 3, 3, 3, 4.

SCALE-BASED VERSUS ARPEGGIO-BASED MELODY

Vocal melody is usually based on scales, emphasizing chord tones. Instrumental melody may also be based on scales, but is more often based on arpeggios, while vocal melody in rock, folk, blues, and jazz (especially standards) is usually scale-based. Improvised solos in bebop and modern jazz, in blues and rock, in folk music are usually based on arpeggios. There are many exceptions, including fiddle tunes in bluegrass music and speed metal which are usually scale-based. The approach in practicing would be different for scale-based versus arpeggio based melody.

This chapter addresses arpeggio-based melody.

Practicing Scale-Based Melody

the melodic line

Melodic cells, the building blocks of melody can be based on either scales or arpeggios, as stated above. Scale-based melody tends to create a smoother melodic line with smaller intervals. Arpeggio-based melody typically uses larger intervals, since arpeggios are typically built by with every-other tone of a heptatonic (seven-tone) scale. The skips that often occur in arpeggio-based melody create a more jagged melodic line.

In practicing scale-based melody, you construct a melody line on a timeline with theme and variation based on scalar melodic cells. In the [Melodic Cells](#) chapter (see [Melodic Cells Types](#)), the arpeggio-based cells in the “[Linear Scales and Arpeggios](#)” section can be used with theme and variation as shown in “[Theme and Variation Cells](#)”. The rest of the melodic cells shown in [Melodic Cell Types](#) are scale-based.

pentatonic melody in rock and blues

Pentatonic melody in rock and blues could be interpreted as either scale-based or arpeggio-based. You could say those genres are “lick-based”. “Licks” tend to be more arpeggio based and usually use much slurring. Three perspectives to conceive pentatonic scales are:

1. Heptatonic scales (7-tone scales like the major scale) with two notes omitted. Major pentatonic is a major scale or Mixolydian mode with its fourth and seventh step omitted. Minor pentatonic is Aeolian, Dorian or Phrygian mode with its second and sixth step omitted.
2. Triads with two notes added. The common minor pentatonic is a minor arpeggio adding "4" and "b7". The common major pentatonic is a major arpeggio adding "2" and "6".
3. Sustaining all the notes of a pentatonic scale at once makes a chord sound. I use chord names to identify pentatonic scales, such as major 6/9 for major pentatonic and minor 7/11 for minor pentatonic.

C major scale with tones numbered below

C major pentatonic, by omitting "4" and "7"

Two musical staves are shown. The first staff is in 4/4 time and contains the C major scale (C-D-E-F-G-A-B-A-G-F-E-D-C) with fingerings 1-2-3-4-5-6-7-1 and 7-6-5-4-3-2-1. The second staff is in 3/4 time and contains the C major pentatonic scale (C-D-E-G-A-G-F-E-D-C) with fingerings 1-2-3-5-6-1 and 6-5-3-2-1. Below each staff are guitar fretboard diagrams for the Tenor (T), Alto (A), and Bass (B) positions, showing the corresponding fret numbers for each note.

C major arepggio with tones numbered below

C major pentatonic, by adding "2" and "6"

Two musical staves are shown. The first staff is in 4/4 time and contains the C major arpeggio (C-E-G-A-G-E-C) with fingerings 1-3-5-1 and 5-3-1. The second staff is in 3/4 time and contains the C major pentatonic scale (C-D-E-G-A-G-F-E-D-C) with fingerings 1-2-3-5-6-1 and 6-5-3-2-1. Below each staff are guitar fretboard diagrams for the Tenor (T), Alto (A), and Bass (B) positions, showing the corresponding fret numbers for each note.

A minor arepggio with tones numbered below

A minor pentatonic, by adding "4" and "b7"

Two musical staves are shown. The first staff is in 4/4 time and contains the A minor arpeggio (A-C-E-G-F-A) with fingerings 1-b3-5-1 and 1-5-b3. The second staff is in 3/4 time and contains the A minor pentatonic scale (A-B-C-E-G-F-E-D-C) with fingerings 1-b3-4-5-b7-1 and b7-5-4-b3-1. Below each staff are guitar fretboard diagrams for the Tenor (T), Alto (A), and Bass (B) positions, showing the corresponding fret numbers for each note.

Am7/11 chord

Am7/11 scale with tones numbered below

Two musical staves are shown. The first staff is in 4/4 time and contains the Am7/11 chord (A-C-E-G-F-A) with the instruction "1-b3-4-5-b7 played together". The second staff is in 3/4 time and contains the Am7/11 scale (A-B-C-E-G-F-E-D-C) with fingerings 1-b3-4-5-b7. Below each staff are guitar fretboard diagrams for the Tenor (T), Alto (A), and Bass (B) positions, showing the corresponding fret numbers for each note.

(possible to play, but be careful!)

practice the six directional types of linear turnarounds

turnaround-based melody in bebop

Every great bebop improviser must have practiced turnarounds in their early development. The structure of their melody shows a turnaround basis. The concept and practice shown in this chapter can give you an ability to improvise in bebop style.

Study this chapter thoroughly. Learn to build your own turnarounds, as described in Modal II-V-I Turnarounds/Building Your Own Turnarounds/[Constructing Four-Note Turnarounds with Two Arpeggios](#). [Practice the Slurring Options](#). Study the [De-Constructing Solos into Five Steps](#) section.

Study [Core Melody Evolving to Elaborated Melody](#). Then start building your own core melody, using the ornamentation and pushes you've learned in [Practice the Slurring Options](#).

BEBOP ORNAMENTATION SLURRING RULES

The Listener's Perspective

Ornamentation typically places notes above and below chord tones, usually slurring most or all of the notes. The listener doesn't particularly care if your ornamentation goes above a note or below a note, so guitarists should take advantage and play the easier slurs. You can practice your scale fingerings with sidesteps (temporary changes to an adjacent fingering position) to accommodate ornaments going both up and down in pitch, but it won't necessarily be appreciated by most listeners. The studies in this section take advantage of slurs that are easier to perform technically on guitar and sound just as well to the listener.

Mordents and Turns

This chapter will use the baroque mordent and turn ornamentations. The terms upper mordent, lower mordent, are used in theory and analysis of the Baroque period of classical music (1700-1850). In this study, we will use versions of mordents and turns that are widely used in jazz. Charlie Parker, Cannonball Adderley, John Coltrane, Art Tatum, Chick Corea and most of the advanced improvisers from the bebop period (1944-early fifties) and later use these ornaments. They didn't necessarily study the classical ornaments, although in John Coltrane's middle period, he studied massive volumes of musical resources, Miles Davis studied at Julliard and Cannonball Adderley studied at Florida A&M. Instead, the ornamentation they carried on from earlier jazz traditions embodied elements of Baroque ornamentation. Harmonically and structurally, jazz draws heavily from classical music.

upper mordent and lower mordent

With the upper mordent, you play the featured note, its upper neighbor and return to the featured note. The lower mordent moves from the featured note to its lower neighbor and returns to the note. The upper or lower neighbor may be in a heptatonic (seven-tone) scale like the major scale or can be in a pentatonic (five-tone) scale.

The rhythms may vary, but mordents commonly occur within one beat. The notes are usually slurred, on guitar most commonly with hammer-ons and pull-offs.

upper turn and lower turn

There are many versions of turns. We will use what I call an upper turn and a lower turn. Both use scalar encircling. Traditionally, the turns that begin by ascending from the main note on which they begin are called “turns”. The versions of turns that begin by descending from the main note on which they begin are called “inverted turns”.

The rhythms used on turns may vary, but turns usually occur within one to two beats. The notes are usually slurred, on guitar most commonly with hammer-ons and pull-offs. Due the mechanics of the guitar, each turn with all hammer-on and pull-off slurs must be on a single string, beginning with the featured note as the middle of three notes on the same string.

fingering mordents

There are usually three tones of a seven-tone scale like the major scale on each string. Use an upper mordent for the lower-pitch note (head side). Use a lower mordet for the upper-pitched note (body side). Use an upper mordent, lower mordent, upper turn or lower turn on the middle note.

fingering turns

Seven-tone scales (like major or Dorian) often have only two notes on one of the strings, as on the diagram at the left below. That wouldn't provide a "middle" note on that string. When this occurs, you can add a note on the head side of the fingering, as shown with the "b3" on the second string in the second diagram from the left below. Use the BLACK notes below as a Cm13 arpeggio.

BEBOP RHYTHMIC INTERPRETATION

Retaining the Swing

Swing eighths divide the beat into two parts of unequal value with the last part shorter. We typically think of this as two-thirds of a beat for the first note and one third for the last part. But, this is interpretive. The first part may be anywhere from around 55% to 75%, which the remainder left for the last part. Swing sixteenths do the same thing with two quarter beats, making the first quarter (of each pair of sixteenths) longer and the last part shorter.

Bebop is most always played with eighth swing at fast tempos (over 180 beats per minute) or with sixteenth swing at slower tempos (below 180 BPM). When rhythms are elaborated by playing three notes in place of the first part of the beat, the division of the beat such be that the three notes in the first part of the beat take the same period of time as a single note would. In each of the two examples below, there are two regions of notes enclosed in brackets. In each case, you should be able to imagine the first bracketed example played while the second bracketed example is played, with the first and last notes of the bracketed example played at the same place in time.

$\text{♩} = 90$ $\text{♩} = 130$ $\text{♩} = 170$

copy by ear, since the math is $\frac{2}{9} + \frac{2}{9} + \frac{2}{9} + \frac{1}{3}$ beat!

Swing Eighths $\text{♩} = 90$ $\text{♩} = 130$ $\text{♩} = 170$

count "1-2-3-4-5" on each beat, playing the notes on "1-2-3-4"

$\text{♩} = 90$ $\text{♩} = 130$ $\text{♩} = 170$

Exaggerating Sixteenth Triplet Beginning Swing Eighths

Read Retaining the Swing, above, first. At faster tempos, the three notes played in the first part of the beat (as in beat three of the third bar above, play longer durations of the three notes in the beginning of the beat and a shorter duration of the note in the last part of the beat to sound like swing to human perception. Here are some analogies:

- to make a single line of type look centered on a page, it needs to be a little high
- to make very high pitches sound in tune, they need to be a little sharp
- to make very low pitches sound in tune, they need to be a little flat
- to right a wrong you've committed to a friend, you have to go a little farther than fair

Similarly, swing at faster tempos needs to have the later of the two divisions of the beat exaggeratedly short for the rhythm to sound right. At around 200 beats per minute, the figure you see below in bar two below sounds better. The rhythm is almost always written as in bar two. Bars three and four are alternate ways to write bar two, but the sound of the rhythm and the math is the same.

At 150 beats per minute the version in bar six sounds better. The last note in bar two is one third of a beat (33.33 percent) while the last note in bar six is 40 percent of a beat. The shorter one-third of a beat value in bar two at the faster 200 BPM tempo *sounds* perceptually like what is written, while to have the same perception at 150 BPM it is better to play it as written in bar six.

At extremely fast tempos, the four notes are performed as sixteenths, as shown in bar eight. Notice with the last staff that it is particularly of concern at extremely fast or extremely slow tempos. The part in the lower staff of each system serves as a metronome.

exaggerating sixteenth triplet durations where they begin swing eighths - [click to play video](#)

The image displays musical notation for a phrase in 4/4 time, focusing on the first two beats. The notation is presented in three systems, each with a tempo and a metronome click track below.

- System 1:** Tempo $\text{♩} = 200$ Swing Eighths. It shows three variations of the first two beats:
 - Bar 2: "appropriate at this tempo" (marked with a 3).
 - Bar 3: "alternate notation for bar 2" (marked with a 3).
 - Bar 4: "alternate notation for bar 2" (marked with a 9).
- System 2:** Tempo $\text{♩} = 150$. It shows two variations:
 - Bar 6: "appropriate at this tempo" (marked with a 5).
 - Bar 8: "appropriate at this tempo" (marked with a 5).
- System 3:** Tempo $\text{♩} = 80$. It shows two variations:
 - Bar 9: "too even-sounding: needs swing" (marked with a 3).
 - Bar 10: "appropriate at this tempo" (marked with a 3).
- System 4:** Tempo $\text{♩} = 150$. It shows two variations:
 - Bar 11: "appropriate at this tempo" (marked with a 5).
 - Bar 12: "too fast to hear the rhythm" (marked with a 3).

Additional tempo markings are present above some staves: $\text{♩} = 290$ above bar 7, $\text{♩} = 200$ above bar 11, and $\text{♩} = 290$ above bar 12. A note above bar 10 states: "contradicting the rules is problematic at extreme tempos".

DE-CONSTRUCTING SOLOS INTO FIVE STEPS

Reverse-Constructing Melody to Find the Core Melody

Complex, highly-decorated improvisational solos can be broken down to simple core melody, identifying the elaborations along the way. We'll do that in five steps. They are numbered in reverse order ("5" through "1") to imply that after de-constructing a few solos, you can start to build your own in the reverse order. You should conceive steps 4, 3, 2 and 1 together, interpreting how the interpretation of each bar is related from step 4 to 3 to 2 to 1.

The typical model would be one chord per bar. Even if the original chords were not one chord per bar, they can be abbreviated or elaborated to be one chord per bar. See ["Abbreviating and Elaborating Chord Progression"](#).

5. **Full Elaboration with Ornamentation and Syncopation.** Learn the original improvised solo well enough to play through it slowly or somehow think through it note by note. Sometimes a complex head (main melody) to a song will work for this purpose like Charlie Parker's Confirmation.
4. **Three or Four Core Melody Tones Per Chord.** Remove the decoration and the syncopation from the full elaboration and conceive version of the melody in three or four notes. Look particularly for chord tones. Especially make sure the first core melody tone is a chord tone. Try to hear and see (on the music notation and/or the fretboard) the theme and variation and the graphic design of the melody. Conceive the graphic design on the fretboard and in its written form. Even if you don't read music, you can conceive the melody as a line drawn from left to right on a timeline, ascending to raise pitch and descending to lower pitch.
3. **Two Core Melody Tones Per Chord.** Omit one or two core melody tones to leave the most important ones. Make sure the first of these two notes is a chord tone and prefer that the second tone is a chord tone or has a purpose in [voice leading](#) to the first tone of the next chord.
2. **One Core Melody Tone Per Chord.** Simply omit the second core melody tone to leave one note per chord, which must be a chord tone of the current chord.
1. **Core Melody Triad (or quadrad):** Choose a group of three notes, close together in pitch that include the one core melody tone you determined above. They should be [duality tones](#), notes common to the current scale and the current chord. Once you get a sense of the [voice leading](#) of the core melody, you can choose a region of three chord tones, close together in pitch and usually including many or all of the notes of the two-note, three-note or four-note versions of the core melody. .

Be Flexible with Each of the Five Steps

Initially decide on what you want for each of the five steps. Feel free to go back and make changes to create a better core melody, better theme and variation and a better full elaboration. Generally, you should go in order from steps one through five, but follow your inspiration. You may have a good idea about any one of the five steps and then generate the other steps from it.

1. Core Melody Triad (or Quadrad)

In arpeggio-based music, the melody is derivative of turnarounds. Decide on the three notes (sometimes four notes, a quadrad) to feature for each chord, usually close together so as to have a “cluster” of chord tones to choose from. Three notes usually provide a good focus and good [voice leading](#) from one chord to the next. Sustain the chosen notes through each chord, commonly four beats each chord. If the chords are less than four beats in duration, you can abbreviate the chord progression to think one chord per bar. Likewise, if the duration of each chord is over a bar, you can elaborate the progression to make it one chord per bar. See [“Abbreviating and Elaborating Chord Progression”](#).

Once you decide on the core melody triad for each of a few consecutive chords, play them in succession, if you can. If they are too close together in pitch, you may have to play them on a piano or arpeggiate them and imagine them played together.

2. One Core Melody Tone Per Chord

If there is only one core melody tone during a chord, it must be a tone of that chord. One core melody tone per chord is essential when the chord changes are fast, such as one beat per chord at any tempo or two beats per chord at a very fast tempo.

3. Two Core Melody Tones Per Chord

When there are two core melody tones during a chord, the first tone must be in the chord. The second tone can be in the chord, or may be a neighboring or passing tone to the core melody tone that begins the next chord.

4. Three or Four Core Melody Tones Per Chord

By using three or four core melody tones per chord, the core melody begins to assume a design. The notes may ascend or ascend and descend, etc. The first core melody tone is a chord tone. If there are four core melody tones, the first and third core melody tones are usually chord tones.

5. Full Elaboration with Ornamentation and Syncopation

Finally, decorate the step 4 (above) of the core melody with Baroque-bebop ornamentation and pushes. See [Elaboration of Core Melody With Pushes](#), [Practice the Slurring Options](#) and [Add Baroque-Bebop Ornamentation](#).

VOICE LEADING CORE MELODY

Voice Leading Roots-In-Fourths Chord Progression

one note per chord

1. **Ascending core tones:** A core tone root can be retained by playing it again or sustaining it to become the fifth of the next chord. A root it can go up a fourth to become the root of the next chord. A core tone third, fifth or seventh can resolve up a step. A third can be sustained to become the seventh of the next chord.
2. **Descending core tones:** Making a downward sequence of thirds, descend four chords with core tones respectively root-third-fifth-seventh (the root of the first chord, the third of the second chord, the fifth of the third chord and the seventh of the fourth chord). You can also make any part of this four-chord sequence with any part of "root-third-fifth-seventh. The seventh must resolve up or down a scale tone.

two notes per chord

1. **Ascending core tones for each pair of chords:** From the root of the first chord, ascend 1-2-3-5, resolving up or down to the nearest core tone. From the third, fifth or seventh, use a 1-3 fragment (a third) on each chord and another 1-3 fragment a step higher on the next chord, end resolving to the nearest chord tone. When the last core tone previous to resolution is the third of the current chord, it can retain or resolve up a scale tone.
2. **Descending core tones for each chord:** Descend stepwise when the first of the two core tones is the root, third or fifth. When the first of the two core tones is the seventh or ninth, descend stepwise from it and retain it or descend a third from the first core tone to the second core tone and resolve up or down to the nearest chord tone.

four notes per chord

1. **Ascend on each chord** with a 1-2-3-5 fragment pattern from the core tone root, third, fifth or seventh or ninth (if the ninth is a useable chord tone) and resolve down a scale tone to the same relative core tone of the next chord as the first tone of the previous chord.
2. **Ascend on each chord** with a 1-2-3-5 fragment pattern from the core tone root, third, fifth or seventh or ninth (if the ninth is a useable chord tone) and retain the fourth note by playing it again or sustaining it. It will become the same relative core tone of the next chord. If the first of four notes played on the first chord started on the root, the first of four notes on the second chord will also be the root. The same duplication would occur if the first note on the first chord were its third, fifth, seventh or ninth.

3. **Ascend on each chord** with a 1-2-3-5 fragment pattern from the core tone root, third or fifth and resolve up a scale tone to become the first note of the next chord.
4. **Descend on each chord** with four descending scale tones and descend down to the root of the next chord. When the first core tone on the first chord is a root, third, fifth or seventh, you can descend four scale tones on the first chord and resolve up a scale tone to the core tone beginning the next chord.

Major and Minor II-V-I Core Melody Exercises with Full Elaboration

I-VI-II-V Two-Beat-Per Chord Song Studies

See the [I-VI-II-V Top Voice Table](#).

The chord progression to I Got Rhythm by George Gershwin has become the most common four-chord progression in jazz, with the nickname “rhythm changes. Half of the doo-wop songs from the thirties through fifties use rhythm changes.

Rhythm changes were used in countless jazz compositions, with a new melody. Such a composition is called a “contrafact”. Since you cannot copyright a chord progression, the contrafact songs are legal. View the list of jazz contrafacts on Wikipedia on a computer and you can click on the “original song” column header to sort by song and scroll down to find over 50 songs based on I Got Rhythm.

https://en.wikipedia.org/wiki/List_of_jazz_contrafacts

Starting at bar 35 in Rhythm Changes, there are labels above the music notation, such “1-#1-2-#2. These refer to core melody tones in relation to the Bb major key scale tones that are the basis of the melody. “1” is “Bb”, “#1” is “B” and “2” is C, etc. In the Rhythm Changes study, all of the core melody sequences are chromatic, each sequence forming four consecutive frets on the guitar. The continuous numbers in varied orders of 1-2-3-4 are fretting hand finger numbers, where the index finger is “1”. Starting at bar 103 in Rhythm Changes, core melody sequences above the music notation, such “1-b3-4-b3-1 are pentatonic melody sequences, a popular choice in bebop and jazz blues.

Core Melody with Simple Elaboration

core melody chord tones

A single core melody tone is always a chord tone. If there are two core melody tones, the second tone may be a chord tone or a non-chordal tone. Non-chordal tones should have a purpose, most commonly as a neighboring tone or a passing tone.

stepwise neighboring tone

A stepwise neighboring tone move one scale tone above or below the previous core melody tone, then returns to the same core melody tone with the following note.

skip to a neighboring tone

You may approach a neighboring tone by a skip, then resolve to a chord tone by a scale step.

passing tone

A passing tone moves by scale step between one core melody chord tone and another.

Core Melody Scale Options

Thoroughly study the chapters [Modal II-V-I Cadences](#) and [Recognizing Scale-Tone Chords](#).

major II-V-I cadences

When the cadence uses chords built on II-V-I of a major scale (Dm7-G7-Cma7 is II-V-I of C major), the scale should be I major. To darken, the scale could be I Mixolydian (C Mixolydian) on the I chord or I Mixolydian throughout the II-V-I cadence.

I harmonic minor (C harmonic minor for II-V-I in C) is often used during the II-V part of a major II-V-I cadence (making Dm7b5-G7b9-Cma7), mimicking the II-V part of a II-V-I cadence,

minor II-V-I cadences

When the cadence uses chords built on VII-III-VI of a parent major scale (Bm7b5-E7b9-Am7 is VII-III-VI of C major), the key scale chords would be IIm7b5-V7(#5, b9)-Im7 (the sharp five and flat nine are options on the V).

The key scale would usually be I harmonic minor on the II-V and I Aeolian on the I chord. If the I chord is the I minor triad, harmonic minor is an option during the Im chord. harmonic minor can be used during Im7 if care is taken to not sustain or otherwise over emphasize the conflicting natural seven of I harmonic minor against the flat seven of the Im7 chord.

secondary dominants

To setup a target chord, the chord immediately before it is often played as a dominant chord with a major third and flatted seventh, if it does not already have those tones. Any IIm7, IIIm7 or VIm7 can be altered to a dominant chord by making the third natural in using it before a chord root up a fourth.

In the key of C, Dm7-G7 can be changed to D7-G7, using D Mixolydian (C Lydian parent scale) and G Mixolydian, respectively.

In the key of C, Em7-Am7 can be changed to E7-Am7, using E Phrygian dominant (C major sharp five parent scale, also called A harmonic minor) and A Aeolian, respectively.

In the key of C, Am7-Em7 can be changed to A7-Em7, using A Aeolian dominant (C major sharp one parent scale, also called A harmonic major) and E Phrygian, respectively.

superimposing cadences and substitution

Study the chapters [Melodically Superimposed Cadences](#) and [Substitution](#).

Six Directional Types of Eighth-Note Turnarounds

Turnarounds are traditionally linear, meaning each arpeggio is ascended or descended. They are shown below in that manner. Turnarounds can also be played non-linearly, skipped around each arpeggio, changing direction from note to note as desired.

♩ = 120

Swing Eighths

Slurring Options for Eighth-Note Turnarounds

one set of turnarounds for each lowest note of the first chord (four sets)

All of the arpeggios are seventh chords played one note at a time, ascending or descending in order of pitch. The titles for the sets end, in order, with “root position”, “first inversion”, “second inversion” and “third inversion”. In order of pitch, the four notes of a seventh chord ascend root, third, fifth and seventh. For Cm7, those notes are respectively C-Eb-G-Bb. See [Constructing Scale-Tone Seventh Chords](#).

There are four sets of seven turnarounds in this section. One set has the lowest tone of the first chord as the root (root position). Another has the lowest tone of the first chord as the third (first inversion). Another has the lowest tone of the first chord as the fifth (second inversion). The last set has the lowest tone of the first chord as the seventh (third inversion).

These exercises have a very regular form, which is described below. You can learn the form of the exercises to the point where you don't need to read them. Only the two most common directional forms of turnarounds are shown here, “down-up” and “up-down”. See [Practice The Six Directional Types of Turnarounds](#).

turnarounds on Autumn Leaves- 28 exercises: seven exercises for each of four inversions

root in bass: II-V, V-I, I-IV, IV-VII, VII-III, III-VI

third in bass: II-V, V-I, I-IV, IV-VII, VII-III, III-VI

fifth in bass: II-V, V-I, I-IV, IV-VII, VII-III, III-VI

seventh in bass: II-V, V-I, I-IV, IV-VII, VII-III, III-VI

The four notes of any seventh chord can be identified with the numbers 1, 3, 5 and 7. Chords may have altered thirds, fifth or sevenths, such as “b3” (flat three), “#5” (sharp five) or “b7” (flat seven), but generically still used the numbers 1, 3, 5 and 7. The root of a chord is the note after which it is named.

If the arpeggio ascends from its root or descends down to its root, it is said to be in “root position”. If the lowest pitch an arpeggio ascends up from or descends down to is its third, it is in “first inversion”. With the fifth as lowest pitch an arpeggio ascends up from or descends down to, its “second inversion”. With the seventh as lowest pitch an arpeggio ascends up from or descends down to, its “third inversion”.

The chord progression in this exercise shows the most common root movement in modern music, roots ascending in fourths. See [Scale-Tone Seventh Chord Progression/Perfect Fourth Cadences](#). The seven-chord progression with root movement in fourths used here occurs in Autumn Leaves, shown in G minor. It is Cm7-F7-Bbma7-Ebma7-Am7b5-D7-Gm7 (changes to G7 just before returning to Cm7)-Cm7. In Roman numerals, the chord progression is II-V-I-IV-VII-III-VI.

Ebma7 to Am7b5 (IV to VII of Bb major) has a root movement of an augmented fourth and is the point when the cycle of perfect fourths shown in [Perfect Fourth Cadences](#) starts over. The seven pages

for each inversion are Cm7-F7, F7-Bbma7, Bbma7-Ebma7, Ebma7-Am7b5, Am7b5-D7, D7-Gm7 and G7-Cm7.

rhythmic considerations

In swing eighths, the first note on a beat is typically two thirds of a beat and the second note is one third of a beat. Placing three notes during the last third of the beat at a fast tempo over 150 beats per minute can be very challenging and sometimes impractical. So, the last two bars of the second and fourth staves Neighboring tones are scale tones immediately above or below chord tones. Passing tones are between two chord tones, usually a third apart, such as a “D” note between “C” and Eb” in a Bb major scale (Bb-C-D-Eb-F-G-A-Bb).

Swing rhythm is variable and the first eighth note on a beat can range from 51 to 75% of a beat, with the second eighth note getting the remainder of 49 to 25%, respectively.

the structure on the top and the bottom halves of each Autumn Leaves turnaround page

On each page in “[turnarounds on Autumn Leaves](#)”, the top three staves show “up-down” turnarounds. The bottom three staves on each page show “down-up” turnarounds.

the structure on the first and fourth staves of each page

On the first and fourth staves of each “[turnarounds on Autumn Leaves](#)” page, the turnaround is first played with no ornamentation, then with ornamentation to the first note using a pickup of the last two notes of a triplet before the third beat.

turnarounds on the first staff

Turnarounds on Autumn Leaves - root position

3

The musical score is written for guitar, featuring a treble clef and a key signature of two flats (Bb and Eb). The piece consists of 36 measures, organized into six systems of two staves each. The top staff contains the melodic line with various ornaments (trills, triplets, sixteenth-note runs) and articulation marks. The bottom staff contains the bass line with fingerings (numbers 1-5) and chord symbols (Bbmaj7, Ebmaj7). The score includes a variety of musical notations such as slurs, ties, and dynamic markings. The piece concludes with a double bar line at measure 36.

Measures 1-6: I-IV, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Fingerings: 1 3 5 7, 3 1 7 5. Bass line: 8 7 6 5, 8 8 7 8, 8 7 8 7 6 5, 8 8 7 8.

Measures 7-12: Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Bass line: 8 7 8 7 6 5, 8 8 7 8, 8 7 5 7 6 5, 8 8 7 8, 8 7 8 6 5, 8 8 7 8.

Measures 13-18: Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Bass line: 8 7 6 8 6 5, 8 8 7 8, 8 7 6 5 6 5, 8 8 7 8, 8 7 6 6 5, 8 8 7 8. ET (escape tone) at measure 18.

Measures 19-24: Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Bass line: 5 6 7 8, 7 8 8, 5 6 5 6 7 8, 7 8 8.

Measures 25-30: Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Bass line: 5 6 5 6 7 8, 7 8 8, 5 6 8 6 7 8, 7 8 8, 5 8 6 7 8, 7 8 8.

Measures 31-36: Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7, Bbmaj7, Ebmaj7. Bass line: 5 6 7 5 7 8, 7 8 8, 5 6 7 8 7 8, 8 7 8 8, 5 6 7 8 7, 8 7 8 8.

The musical score is written for a single melodic line in B-flat major (two flats) and a tenor/bass line. The key signature is B-flat major. The score consists of 36 measures, divided into six systems of six measures each. The melodic line features various ornaments, including triplets and sixteenth-note runs. The tenor/bass line provides harmonic support with chords and fingerings.

System 1 (Measures 1-6):

- Measure 1: IV-VII (written in a box)
- Measure 2: Rest
- Measure 3: E \flat maj7
- Measure 4: Am7(b5)
- Measure 5: E \flat maj7
- Measure 6: Am7(b5)

System 2 (Measures 7-12):

- Measure 7: E \flat maj7
- Measure 8: Am7(b5)
- Measure 9: E \flat maj7
- Measure 10: Am7(b5)
- Measure 11: E \flat maj7
- Measure 12: Am7(b5)

System 3 (Measures 13-18):

- Measure 13: E \flat maj7
- Measure 14: Am7(b5)
- Measure 15: E \flat maj7
- Measure 16: Am7(b5)
- Measure 17: E \flat maj7
- Measure 18: Am7(b5) with ET (eascape tone) marking

System 4 (Measures 19-24):

- Measure 19: Rest
- Measure 20: Rest
- Measure 21: E \flat maj7
- Measure 22: Am7(b5)
- Measure 23: E \flat maj7
- Measure 24: Am7(b5)

System 5 (Measures 25-30):

- Measure 25: E \flat maj7
- Measure 26: Am7(b5)
- Measure 27: E \flat maj7
- Measure 28: Am7(b5)
- Measure 29: E \flat maj7
- Measure 30: Am7(b5)

System 6 (Measures 31-36):

- Measure 31: E \flat maj7
- Measure 32: Am7(b5)
- Measure 33: E \flat maj7
- Measure 34: Am7(b5)
- Measure 35: E \flat maj7
- Measure 36: Am7(b5)

The tenor/bass line includes fingerings (1-7) and chord symbols (T, A, B) for each measure.

The musical score is written for a single melodic line in B-flat major, with a tenor and bass line (T/B) for improvisation. The key signature has two flats (B-flat and E-flat). The score consists of 36 measures, divided into six systems of six measures each. The first measure is marked with a box containing 'I-IV'. The second measure is marked with a '2'. The third measure is marked with '3 Bbmaj7'. The fourth measure is marked with '4 Ebmaj7'. The fifth measure is marked with '5 Bbmaj7' and a '3' above the staff. The sixth measure is marked with '6 Ebmaj7'. The seventh measure is marked with '7 Bbmaj7'. The eighth measure is marked with '8 Ebmaj7'. The ninth measure is marked with '9 Bbmaj7'. The tenth measure is marked with '10 Ebmaj7'. The eleventh measure is marked with '11 Bbmaj7'. The twelfth measure is marked with '12 Ebmaj7'. The thirteenth measure is marked with '13 Bbmaj7'. The fourteenth measure is marked with '14 Ebmaj7'. The fifteenth measure is marked with '15 Bbmaj7'. The sixteenth measure is marked with '16 Ebmaj7'. The seventeenth measure is marked with '17 Bbmaj7'. The eighteenth measure is marked with '18 Ebmaj7'. The nineteenth measure is marked with '19'. The twentieth measure is marked with '20'. The twenty-first measure is marked with '21 Bbmaj7'. The twenty-second measure is marked with '22 Ebmaj7'. The twenty-third measure is marked with '23 Bbmaj7'. The twenty-four measure is marked with '24 Ebmaj7'. The twenty-fifth measure is marked with '25 Bbmaj7'. The twenty-six measure is marked with '26 Ebmaj7'. The twenty-seventh measure is marked with '27 Bbmaj7'. The twenty-eighth measure is marked with '28 Ebmaj7'. The twenty-ninth measure is marked with '29 Bbmaj7'. The thirtieth measure is marked with '30 Ebmaj7'. The thirty-first measure is marked with '31 Bbmaj7'. The thirty-second measure is marked with '32 Ebmaj7'. The thirty-third measure is marked with '33 Bbmaj7'. The thirty-four measure is marked with '34 Ebmaj7'. The thirty-fifth measure is marked with '35 Bbmaj7'. The thirty-six measure is marked with '36 Ebmaj7'. The score includes various musical notations such as eighth notes, quarter notes, half notes, and full notes, as well as slurs, ties, and ornaments. The T/B line includes various musical notations such as eighth notes, quarter notes, half notes, and full notes, as well as slurs, ties, and ornaments.

Turnarounds on Autumn Leaves - first inversion

The musical score is written for a single melodic line in B-flat major (two flats) and a bass line. The key signature has two flats (B-flat and E-flat). The score consists of 36 measures, grouped into six systems of six measures each. The first measure of the first system is marked with a box containing 'IV-VII'. The notes in the first system are: 1. B-flat (quarter), 2. rest, 3. E-flat (quarter), 4. A (quarter), 5. B-flat (quarter), 6. A (quarter). The notes in the second system are: 7. B-flat (quarter), 8. A (quarter), 9. E-flat (quarter), 10. A (quarter), 11. B-flat (quarter), 12. A (quarter). The notes in the third system are: 13. B-flat (quarter), 14. A (quarter), 15. E-flat (quarter), 16. A (quarter), 17. B-flat (quarter), 18. A (quarter). The notes in the fourth system are: 19. B-flat (quarter), 20. rest, 21. E-flat (quarter), 22. A (quarter), 23. B-flat (quarter), 24. A (quarter). The notes in the fifth system are: 25. B-flat (quarter), 26. A (quarter), 27. E-flat (quarter), 28. A (quarter), 29. B-flat (quarter), 30. A (quarter). The notes in the sixth system are: 31. B-flat (quarter), 32. A (quarter), 33. E-flat (quarter), 34. A (quarter), 35. B-flat (quarter), 36. A (quarter). The bass line consists of eighth and quarter notes, often beamed together in groups of three or six. The first system's bass line is: 1. B-flat, 2. rest, 3. E-flat, 4. A, 5. B-flat, 6. A. The second system's bass line is: 7. B-flat, 8. A, 9. E-flat, 10. A, 11. B-flat, 12. A. The third system's bass line is: 13. B-flat, 14. A, 15. E-flat, 16. A, 17. B-flat, 18. A. The fourth system's bass line is: 19. B-flat, 20. rest, 21. E-flat, 22. A, 23. B-flat, 24. A. The fifth system's bass line is: 25. B-flat, 26. A, 27. E-flat, 28. A, 29. B-flat, 30. A. The sixth system's bass line is: 31. B-flat, 32. A, 33. E-flat, 34. A, 35. B-flat, 36. A. The score includes various musical notations such as slurs, ties, and fingerings (e.g., 1 3 5 7, b3 1 b7 b5, 6 5 8 7, 5 7 5 6, 6 5 6 5 8 7, 5 7 5 6, 6 5 7 5 8 7, 5 7 5 6, 6 5 7 8 7, 5 7 5 6, 6 5 8 7 5 7, 5 7 5 6, 6 5 8 7 5 7, 5 7 5 6, 7 5 3 1 (b5) b7 1 b3, 7 8 5 6, 5 7 5, 7 5 7 8 5 6, 5 7 5, 7 5 7 8 5 6, 5 7 5, 7 5 3 5 6, 5 7 5, 7 8 5 7 5 6, 5 7 5, 7 8 5 6 5 6, 5 7 5, 7 8 5 6 5, 6 5 7 5).

The musical score is written for a single melodic line in G minor, featuring a series of 36 measures. The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a common time signature. The melody is composed of eighth and quarter notes, often grouped in triplets or pairs. Chord symbols (G⁷, Cm⁷, VI-II) are placed above the staff to indicate the harmonic context. Fingering numbers (1-5) are written below the notes to guide the performer. The score is divided into six systems, each containing six measures. The first system begins with a 'VI-II' chord symbol. The second system includes a specific fingering sequence: 1 3 5 b7 b3 1 b7 b5. The third system includes a triplet of eighth notes. The fourth system includes a triplet of eighth notes. The fifth system includes a triplet of eighth notes. The sixth system includes a triplet of eighth notes. The score concludes with a double bar line.

Core Melody Elaboration with Theme and Variation

More often you should use theme and variation in core melody. It helps the listener to predict and understand your melody. Recall audio memories to inspire you with ideas for your parts. Establish a theme, then repeat it with variation.

Elaboration of Core Melody with Pushes

Non-Linear Turnarounds

The notes of each arpeggio in a turnaround can change direction from note to note, making the playing of the arpeggio non-linear. Though this may be more difficult for the listener to follow, it is often more interesting for the listener, more provocative.

1-3 (fifths), 123 and 1234 fragment patterns

more random non-linear choices of arpeggio tones

MELODIC EXAMPLES

Autumn Leaves improv - core melody

Autumn Leaves improv - full elaboration **120 BPM, 90 BPM**, (click to play video)

The musical score is written for guitar, featuring a treble clef and a key signature of one flat (Bb). The tempo is 120 BPM and 90 BPM. The score is divided into five systems, each containing two staves (Treble and Bass) and a line of fingerings. The measures are numbered 1 through 25. The chords are: 1 Gm7, 2 Cm7, 3 F7, 4 Bbmaj7, 5 Ebmaj7, 6 Am7(b5), 7 D7, 8 Gm7, 10 Cm7, 11 F7, 12 Bbmaj7, 13 Ebmaj7, 14 Am7(b5), 15 D7, 16 Gm7, 18 Am7(b5), 19 D7, 20 Gm7, 22 Cm7, 23 F7, 24 Bbmaj7, 25 Ebmaj7. The fingerings are written below the notes, and the bass staff shows the corresponding fret positions.

Jazz Blues in Bb - four stages of core melody

1. core melody: a cluster of chord tones

2. harmonic framework with no elaboration

3. harmonic framework with simple elaboration

4. full elaboration with ornamentation and syncopation

The score is divided into four sections, each showing a different level of melodic elaboration. Each section includes a treble clef staff with a key signature of two flats (Bb major), a bass clef staff with a key signature of two flats (Bb major), and a tenor/bass staff with a key signature of two flats (Bb major). The first section (measures 0-6) shows a progression of chords: Cm7, F7, Bb7, Eb7, Bb7, Eb7, and Eb7(b9). The second section (measures 7-12) shows a progression of chords: Bb7, G7(b9), Cm7, F7, Bb7, G7(b9), Cm7, and F7. The third section (measures 13-18) shows a progression of chords: Bb7, G7(b9), Cm7, F7, Bb7, G7(b9), Cm7, and F7. The fourth section (measures 19-24) shows a progression of chords: Bb7, G7(b9), Cm7, F7, Bb7, G7(b9), Cm7, and F7. The score includes fingerings for both hands and a tenor/bass staff with a key signature of two flats (Bb major).

MELODIC DESIGN TYPES

The jazz tunes in this section are published in books listed in this Favored Jazz song list, at the link below:

<http://www.guitarencyclopedia.com/zzFavoredJazz.pdf>

The books are shown in the right column. You will probably need to read the tunes while reading my descriptions in this chapter.

In regard to melodic cells (see [Melodic Cell Types](#)), melodic design types are designs *made* with melodic cells.

Periodic Theme And Variation

Periodic themes occur in many instances in an improvised melody with other connective material. They use more independent ideas that occur periodically and usually have a minimalist basis.

By contrast, sequential theme and variation builds longer melodic ideas without so much connective material. Intervallic theme and variation is more continuous structure, rather than periodic.

Au Privave

The primary theme is established with the first four notes, reoccurring in bars 2, 3, 6, 9, 10 and 12. A secondary theme is the eighth note pickup to a quarter note in bars 5, 7, 8, 10 (pickup to beat).

Bloomdido

Two themes. The first four notes, which reoccur at the beginning of bars two and three. It also occurs at the beginning and end of bar eleven.

The second theme begins bar five and is an inversion of the first (down-up, instead of up-down). The second theme reoccurs in bars six, eight and with elaboration nine.

Four

Georgia

Girl From Ipanema

Have You Met Miss Jones

Sequential Theme and Variation with the Melodic Curve

Autumn Leaves

Autumn Leaves section A uses four two-bar phrases that each begin with a three note scalar pickup from the fifth of the target chord. Each phrase ascends 5-6-7 in the mode of the target chord, then skips up a fourth to the third of the target chord.

Autumn Leaves section B uses two or three pickups to begin each chord. The three note pickups in the second bar resolves to the beginning of the third bar in the same manner as the pickup in the fourth bar resolves to begin the fifth bar. The two note ascending pickup to the first bar is the same idea as the three-note descending pickup to the seventh bar, except the three note pickup repeats its first note with an octave interval.

All the Things You Are

All The Things You Are bars 1-8 uses pairs of notes in fourths for three pairs of pairs: parent scale 1-4, 7-3, 6-#2, then resolves to the key on III with original key tone #5. For bars 9-16, it repeats this idea in the key of IV.

All The Things You Are bars 17-24 uses four two-bar phrases. The first and third phrase start with a three-note pickup that ascends to a fourth note at the beginning of the chord. That fourth note is an upper neighbor to a chord tone, making it an [appoggiatura](#) (leaning tone), which resolves afterward, down to the chord tone. The second and fourth two-bar phrases each use a three-note pickup which ascends to an upper neighbor with the third note. Then the fourth note resolves down to the chord tone on the first beat of the chord.

Bag's Groove

One note pickup from tonic to fifth of key. Each pair of eighths that follows encircles the tone that it precedes. The melody is all tones of minor pentatonic, but ingeniously phrased so each target tone after the encircling is a chord tone, considering the II chord is IIm11.

In the more elaborate version of the melody, the pickups are four notes, which are a “mordent” which is a group of slurred notes: target, upper neighbor, target, lower neighbor, target. Using F minor pentatonic or the note “Bb”, this would be Bb-C-Bb-Ab-Bb.

Black Orpheus

The theme is fifth of target I minor to flatted third of I minor on the first beat of the chord. Two note pickup to the tonic beginning bar two, which is a chord tone of that chord. The end of bar two encircles the tonic to begin bar three, but rather than the tonic, the melody skips to the fifth of the key, which is a chord tone of *that* chord. In the encircling, the fifth of the parent scale (the relative major key) is sharpened, making harmonic minor.

The same melody is used on the next four bars, which cadence to the relative major on in bar seven (the third of those four bars). The theme is only changed by using natural five of the parent scale (the relative major scale).

Bars nine through sixteen begin with four two-bar phrases that each use a three eighth-note pickup that ascends to the fifth of the target chord. The first three of those two-bar phrases follow beginning each chord on its fifth with the root of the chord.

Bars seventeen through thirty two follow the same general ideas.

FORM: THE ORDER OF SECTIONS

See [Reading Notation](#)/Repeats, Segno, Endings & Coda, Etc.

Word Labels For Sections

verse

The verse tells the story. It is almost always softer and calmer than the chorus and is commonly in the same key as the chorus, and is usually in what is considered the overall key of the song. Two or more verses commonly occur before the first chorus. Verses don't have to come before the chorus.

Verse comes from the Latin word *versus*, which means a line of writing and is based on the Proto-Indo-European root *wer*, meaning to turn or bend. Think of "a turn of phrase", "bending the listener's ear" or "bending the truth" to tell a story.

chorus

The title of the song is usually sung in the chorus and commonly summarizes the story. It is usually louder and fuller than the verse, with more harmony vocals. Etymologically, chorus is an extension of "court" referring to an enclosed area where people assemble to play and sing music or theatrical performance. The chorus comes after the verses a little more commonly, but sometimes songs start with the chorus.

The *refrain* is the line of words that is repeated during the chorus.

pre-chorus, pre-verse, post-chorus, post verse

Around 1990, I started seeing "*pre-chorus*" in printed sheet music. It seemed a strange term to me at first, but I've accepted it over time. As you would think, it comes before the chorus, and usually builds excitement into the chorus. *Post chorus* likewise applies an addendum to the end of the chorus without changing to another section.

The term could be likewise applied to content that precedes the verse: a pre-verse.

Post verse could apply the same principle as post chorus in applying an addendum to the end of a verse without changing to another section.

bridge or middle eight

The section that connects the verse and chorus is called the bridge. It might not occur until the second time the verses and chorus are played. It more commonly follows the chorus. The bridge is more often

in a different key from the verse and chorus, typically a key a perfect fourth (five frets) higher than the verse.

The *middle eight* is a type of bridge that occurs between two choruses using different melody and usually different chord progression. The middle eight can choose from a wide variety of chord progression types.

intro

The intro (abbreviation for introduction), is played at the beginning of a piece. Songs don't always have introductions. Introductions are most commonly borrowed from the end of one of the main sections of the song, the verse or chorus (A or B sections in an instrumental piece). They are typically based on the end of the verse or chorus (A or B section) and followed by the same section they go into in the song.

For example, at the end of the chorus, the music flows into the verse. The intro starts with the end of the chorus, then goes into the first verse. A twelve bar blues commonly begins with the last four bars of the twelve bar chord progression, followed by the twelve bar progression from its beginning.

ending

Like an intro, an ending should be based on content borrowed from the verse or chorus. It is often the last four bars of a verse or chorus played three times, followed by an ending chord. The ending is expected to complete with the chord named after the key, but can use a deceptive cadence, ending on an unexpected chord.

fade-in

A song sometimes begins with a fade-in. An intro or vamp is usually used for the fade-in and usually occurs in recorded music, not live music. The volume swells up from silence, usually to the level standard for the song. Fade-in is not used often, probably because, like fade-outs, it is dynamically and expressively weak.

vamp

A rhythm section with a repeating chord progression (or on a single chord), without any significant thematic material. Vamps are used as "filler" between other sections. They are typically used to setup the section that follows them by establishing the "groove", rhythmic nature, mood, chord sound, etc (any or all of these).

solo

We're used to hearing a guitar solo (or other instrument, if they insist) two-thirds of the way through a song. In this section, the guitar player improvises, or ad-libs. The melodic content may be based on the

vocal part in the verse or chorus, or may be [theme and variation](#). It is important to have some structure to the solo and not just play a bunch of dis-related licks.

The accompaniment is usually simpler during a solo, so the listeners focus can be on the solo content. If the accompaniment has melodic themes, it makes it more challenging for the soloist to make their melody understandable at the same time as the themes in the accompaniment.

interlude or instrumental break

An interlude is a brief instrumental section between main sections like verse and chorus. It is similar to a vamp but usually has thematic material (melody) that is less important than that of the main sections.

An instrumental break is usually improvised or composed to sound more improvisational.

“A” section and “B” section, etc.

In instrumental music, there are usually two, sometimes three or more main sections. The sections are traditionally labeled with letters: section A, section B, section C, etc.

AABA form

The most common song structure is thirty two bars, with two eight-bar A sections, an eight-bar B section and an eight-bar A section. Sections may be of different lengths, but eight, twelve and sixteen bar sections are most common.

a cappella (in the manner of the chapel)

When vocals are sung without instruments, they are called a’ cappella, meaning “in the manner of the chapel”. In early western religion, it was thought unholy to have musical instruments in the place of worship. Overtime, instruments have been accepted in churches, along with every imaginable style of music.

drop sections or drop beats

Like the middle eight, drop sections can follow a chorus to increase intensity with a abruptly lowered volume with an optional change in rhythm. This has become popular in EDM (Electronic Pop Music) and other pop styles since 2010.

elision (also called collision or phrase overlap)

An elision is a song section where different sections overlap one another, usually briefly. It is mostly used in up-tempo music to create tension and drama and to keep the song from losing its energy during resting points (held sustain) at cadences, typically on a tonic or dominant chord.

With an elided cadence, you can bring the section to a cadence on the tonic and immediately begin a new section of music which overlaps with the cadence. The elided cadence may borrow thematic material from other sections of the song.

In Cyndi Lauper's *Time After Time*, the last word of the first verse is omitted, singing "time after ..." (omitting "time"). In place of the missing "time", she sings "sometimes" the first word of the second verse.

(OLD CONTENT)

“E” phrases are “empty”, usually with one note at their beginning.

Sections are designated with hyphens (A-1) and phrases without hyphens (A).

A number before a letter beginning a phrase name indicates it’s length in bars (“4A1” shows that A-1 is four bars long).

Charlie Parker tends to use minimalist themes (typically four-note) with rhythmic displacement. He varies phrases by contrast with consecutive syncopation. It’s amazing how alike his 12 bar blues heads are alike in this way.

Sections may vary to accommodate harmonically, such as “3” in section A on a I7 chord and “b3” in another section A during a IV7 chord.

Phrase Divisions Are Similar to Section Divisions

Phrase divisions are similar to section divisions, but are more abstract.

Billie’s Bounce. The first two-bar phrase uses lower chromatic neighbors and features the tonic (“F”) and its “low six”, the sixth of the key commonly used as a lower neighbor to “one” (in the sense of a pentatonic neighbor). Bars three and four just keep bopping along with “one” and its “low six”.

Bar four begins with a lower chromatic embellishment, an encircling mordent (F-G-F-D-F in the key of F), followed by more one and six.

Bars five and six use the key tones that are the b7 and root of the IV chord. Notice that the first note in bar six is the third of the key, even though the IV7 chord has a flatted third of the key. Charlie Parker would commonly refer to our memory of major melodies by using major over Mixolydian or our memory of minor melodies by using harmonic minor over Aeolian.

The end of bar six and beginning of bar seven feature I7 chord tones. Bar eight (including the pickup at the end of bar seven) are structured around three sixths in the key of “F”: G-E for the Am7, F#-Eb (D#) for the D7 and F-D for the Gm7 (“F” for the Gm7 is not actually played, but implied).

Bars nine and ten outline the II minor chord with a descending bass figure: “G” in Gm to “F#” in Gm(ma7) to “F” in Gm7 (or C7sus4) to “E” in C7.

Finally, in bars eleven and twelve, we return to one and the low six.

Beatles

Can’t Buy Me Love verse, Hard Day’s Night (on a second level, the third pair serves as a response to the first two pairs), Sgt. Pepper’s Lonely Heart’s Club Band chorus,

Three Statements And Ending Response (As In 16 Bar Gospel Blues)

Beatles

All My Loving verse, All You Need is Love verse, All You Need is Love chorus, And I Love Her verse, And I Love Her chorus, And Your Bird Can Sing bridge, Drive My Car verse, Drive My Car chorus, Fool on the Hill chorus, Get Back chorus (two-note response), Help! chorus, I Saw Her Standing There, I Will bridge, Sgt. Pepper’s Lonely Heart’s Club Band verse.

Four Phrases With A Busy Third And Sparse Fourth Phrase (commonly eight or 16 bars)

Beatles

Fool on the Hill verse. Four one-bar phrases of four eighth notes except more continuous but syncopated eighths in the third bar.

Here Comes the Sun verse. Two pairs of statement and response, each pair taking four bars. The third set of four bars is two statements and the fourth set is a response followed by a “hook” guitar theme.

Let It Be chorus, Nowhere Man bridge, Ticket to Ride verse,

More Complex

Beatles

Eleanor Rigby verse. A five-bar phrase. A four-note theme in the first bar. A variation of the theme in the second and third bars by repeating the four-note theme ending with a push, then three instances of

the same theme by using the last three of four eighth notes starting on the beat. Bar four is pushed into from the end of bar three, otherwise empty. Bar five restates bar one.

Day in the Life verse. Two pairs of statement and response, followed in the end of the first verse with a restatement of the fourth phrase (the second response). At the end of the second verse, the two pairs of statement of response are followed with a conclusion (“I’d love to turn you on”).

Fool On The Hill pre-chorus. It begins with one statement and response. Another pair begins, but is statement only, to be completed by the chorus.

Michelle bridge (“I love you”). A two-bar statement, two-bar response; then a two bar statement and a four bar response (first three bars busy, last one sparse).

Sgt. Pepper’s Lonely Heart’s Club Band bridge. A one-bar statement, one-bar response; then a one-bar statement and a two-bar response, making five bars in all.

Something verse. A two-bar statement, two bar response; then a two bar statement and a three-bar response (first three bars busy, last one sparse). This takes nine bars.

REPEATS, SEGNO, ENDINGS & CODA, ETC.

Beat or Bar Repeats

bar lines

The vertical lines (|) in the examples below separate the music into bars. In Imagine intro, the first bar contains “C” and “CΔ”. The second bar contains “F”.

Imagine intro

a forward slash indicates each repeated beat

Each forward slash (/) in the Imagine intro chord progression notation above indicates the chord should be played another beat. In bar 1, the first beat is indicated by the chord name (“C”). Beats two and three of bar 1 should each play the C chord another beat. Beat four of bar 1 is “CΔ7” (C major 7).

And Your Bird Can Sing intro

a forward slash with dots indicates a repeated bar

The forward slash symbol with dots on the lower left and lower right (⋈) in the And Your Bird Can Sing intro chord progression notation above indicates the chord should be played for another bar.

the double forward slash with dots directs you to repeat the previous two bars

The double forward slash with dots that draw across the barline between bars 3 and 4 of the And Your Bird Can Sing intro indicates that the “E” chord should be played for two more bars (in bars 3 and 4).

Left and Right Repeat Signs

Eleanor Rigby *without* begin repeat

Eleanor Rigby *with* begin repeat

the right repeat (end repeat)

The right repeat sign (||:) indicates that you repeat from the beginning if there is no left repeat (||:), as shown in Eleanor Rigby *without* begin repeat.

the left repeat (start repeat)

As shown below in Imagine, the left repeat sign (||:) indicates that once you get to the right repeat sign (||:), you would play the content again from the left repeat to the right repeat.

Imagine with left and right repeat for bars 5-12

in chord symbol notation

As in standard music notation, repeat signs indicate a section is played twice. Chord names can be in letter name version or roman numerals, making no difference in the effect of the repeats.

The symbol “||:” is the left repeat shown at the beginning of the repeated section. The symbol “:||” is shown at the end of the repeated section. See the example below, where four bars are to be played twice.

||: I | IV | bVII6 | I :||

When more repetitions are needed, it can be indicated in text. This examples tells us to play the four bars four times.

4X: ||: C | Bb | F6 | Bb :||

Double Bar Lines

thin double barlines

A thin pair of barlines (||) indicates the end and/or beginning of a section. It has no effect on the duration of notes in performance.

thin then thick pair of barlines

A thin then thick pair of barlines (|||) indicates the end of a song.

Multiple Endings

Chains

in 4/4

A $\frac{4}{4}$ B^b | $\frac{4}{4}$ | $\frac{4}{4}$ | $\frac{4}{4}$ B^b | $\frac{4}{4}$ | $\frac{4}{4}$ | $\frac{4}{4}$ |

E^b_9 | $\frac{4}{4}$ | B^b | $\frac{4}{4}$ | F_9 | E^b_9 | B^b | F |

2. B^b_7 | E^b_9 | $\frac{4}{4}$ | B^b | B^b_7 | E^b_9 | $\frac{4}{4}$ | F |

3. B^b_7 | E^b_9 | $\frac{4}{4}$ | B^b | B^b_7 | E^b_9 | $\frac{4}{4}$ |

F | $\frac{4}{4}$ ||

D.S. al Coda

B^b_7 | B^b | $\frac{4}{4}$ | $\frac{4}{4}$ | $\frac{4}{4}$ | E^b |

E^b | B^b ||

numbered endings

In Chains, shown above, there are three numbered endings. Once you get to the first ending with “1.” enclosed in an angle bracket, you play up the repeat sign ($\frac{4}{4}$), then go back to the left repeat sign ($\frac{4}{4}$) and continue up to (but not including) the first ending. Skip the first ending and go on to the second ending with “2.” enclosed in an angle bracket. If there is another right repeat sign ($\frac{4}{4}$) after the “2.”, as there is in *Chains* above, you should go back *again* to the left repeat then go back to the left repeat sign ($\frac{4}{4}$) and continue up to (but not including) the first ending again. Now go to the third ending (the second bar in the fourth row in *Chains*). If there weren’t further instructions, you would go on to the end. But there *are* further instructions. Read about D.S. al Coda below.

Endings with Special Instructions

§ (Segno)

Segno is a sign indicating the location you go to, earlier in the song, to then proceed to the end or coda as instructed. Details below.

D.S. (dal segno)

If only “D.S.” is shown, you should to the location of the “§” (segno) and proceed from there, following any further instructions that may come up.

⦿ (Coda)

The ⦿ (coda) symbol shows where you depart from the main body of music and go on to the ending section which bears another ⦿ (coda) symbol and/or the word “Coda”. You might see it any of the three ways (⦿, Coda or both). See D.S. al Coda below.

D.S. al coda (dal segno al coda)

Where “D.S. al Coda” is shown, like in the fourth row of *Chains* at the end of the third ending (3.), you should to the location of the “§” (segno) and proceed from there to the ending section which bears another ⦿ (coda) symbol and/or the word “Coda”. You might see it any of the three ways (⦿, Coda or both).

D.C. (Da Capo)

D.C. means go back to the beginning. “Capo” means “head” as in the “top” or beginning.

Fine

“Fine” marks the end.

D.S. al fine (dal segno al fine)

Where “D.S. al Fine” is shown, you should to the location of the “” (segno) and proceed from there to the ending, where the word “fine” should appear.

D.C. al fine (da capo al fine)

Go back to the beginning and proceed to the end at “fine”.

(Fermata)

Sustain the note or chord shown under this symbol approximate double the duration or until cued by the bandleader.

Play x Times Versus Repeat X Times

When “play 3x” is written in the last bar of a repeated section (with left and right repeats), play three the section three times. It can be written simply “3x”

When “repeat 3x” is written in the last bar of a repeated section (with left and right repeats), play the the section *four* times (once for the initial notation, then repeat three times). Avoid this notation, it can be misunderstood.

- **Combined Cadences**
- **Subsets on the Fifth**

CADENCE DEFINED

Cadences (also called harmonic cadences) are short chord progressions that are known to establish a particular chord as a key or temporary key by sound. The tonic chord is the focal point of the cadence that establishes the key.

We have heard the dominant chord (V or V7 type) so often before the tonic (I or Im type) that we have an automatic association with the tonic (I) being the key. This succession uses perfect fourths.

To make the cadence, a dominant seventh chord is used on the fifth step of a scale named after the root of the tonic chord. “bII” of the target can also be used as a “[flat five substitute](#)”, since it is on the flatted fifth of V (“Db” or bII is a flatted fifth of “G” or V).

melodic cadence

A melodic cadence is the implication of a harmonic cadence in melody. Melodies can be analyzed from multiple perspectives, where each can be valid.

cadences in fourths

Cadences are typically in fourths or [flat five substitutes](#) of fourths. “Back cycling” in fourths can create longer cadences, building with the series of perfect fourths #IV-VII-III-VI-II-V-I-IV. The most common cadences have one or two chords before the tonic or temporary tonic chord.

Cadences often involve minor chords changed to major to strengthen the progression. These are called [secondary dominants](#), since the chord changed to major can act like a V chord (major, as it would occur in the major scale) of the chord it precedes.

Cadences can also be made in fourths without dominant seventh chords, such as IIm7 Vm7 I (notice the V minor). These tend to be less dramatic and less aggressive by nature and are characteristic of calmer music such as old english folk music or slave work songs with V minor chords.

The entire sequence of perfect fourths in the major scale is VII-III-VI-II-V-I-IV (7-3-6-2-5-1-4). In the unaltered major scale, the triad versions of these chords are VII diminished-IIIIm-VIm-IIIm-V-I-IV. Notice the successions of three minor chords (IIIIm-VIm-IIIm) and three major chords (V-I-IV). The seventh chord qualities of these chords are VIIIm7b5, IIIIm7, VIm7 IIIm7, V7, Ima7 and IVma7.

Since V is known to lead to I, II can also lead to V, since it is the “V of V”. This leads to the chord progression II V I, which is the most common three-chord cadence.

In establishing the key on VI, we precede it with III, so as to go up a fourth, as with V to I. To make the progression stronger, III is commonly changed to major if a triad or to a dominant seventh.

VII^{dim}-III-V^{Im} or VII^{Im}7^{b5}-III⁷-V^{Im} has become the most common minor cadence in establishing V^{Im} as the key.

the harmonic breath between consonance and dissonance

Consonance produces calm. It is produced with harmonies that alternate major and minor thirds, perfect fourths and perfect fifths. Dissonance produces tension. It is produced by half steps, diminished and augmented fifths, major sevenths and by serial intervals in diminished seventh chords (all minor thirds) and augmented chords (all major thirds).

When emphasized notes are primarily within the current chord and the chord has consonant intervals, there is a sense of calm. When emphasize notes are not in the current chord, tension is produced. There is even more tension when the chord has dissonant intervals, like minor seconds and diminished fifths (same as augmented fourths).

Sense the “breathing” of consonance and dissonance in the accompaniment of the piece you are improvising on. Then decide if your “harmonic breath” will be the same as the accompaniment. More commonly the harmonic breath in the melody changes more rapidly than in the accompaniment. While the accompaniment may remain calm through an entire bar or two, the melody may fluctuate between consonance every beat or two.

I, IV, V and V^{Im} chords are typically consonant. V and bII chords are commonly dissonant, especially when they have altered fifths and/or altered ninths (b5, #5, b9#9). Any chord with a major third and altered fifths or ninths is dissonant.

By alternating melodic cells of three to six notes back and forth between chord tones (or pleasing added chord tones) and non-chordal tones of the current chord, you could say the music “breathes” with tension as it inhales and relaxation as it exhales.

Hit Points

cadences are expected to end on the target

Cadences follow logical progressions of roots moving in stepwise, perfect fourth or chromatic order. They help us recall the establishment of a key or temporary key as we’ve heard it in previous music we have heard.

phrasing cadences

In composition and arranging, two-chord and three-chord cadences are usually phrased so the last of them ends on the first beat or on the third of four beats. Other locations can work, but should be metrically strong.

This same phrasing is used for superimposed chords. Superimposing adds more chords, but they still follow the same phrasing guidelines of targeting the first beat, third beat or other metrically strong location.

Chords should be melodically emphasized by playing chord tones of the target chord at the beginning of the chord or on strong metric points like the first or third beat in 4/4 (optionally pushing the beat).

jazz-related styles are based on seventh chords

In jazz-related, the target chord is can be a secondary root on its third or sixth, implying a larger seventh or ninth chord. As a result, a superimposed three-chord progression can begin or end with any scale tone and be phrased to work on the target chord, with one exception. One of the sequences of three chords will have the target in the middle, in which case.

If you want to emphasize the first chord of a three-chord cadence, put it at the beginning of a chord in the accompaniment or on the first or third beat (optionally pushing the beat). If you want to emphasize the last of three chords, start the phrase before the target chord begins or before the first or third beat, so the last chord arrives at the hit point.

pop styles are based on triads

Pop styles like folk, reggae, hard rock, soft rock and metal are typically based more on triads. Triads have fewer synonyms. It is a bit of a stretch to even imply a triad as a four-note sixth or seventh chord, and even more stylistically inappropriate to imply an five note chord like a ninth chord. This makes the uses of cadences more difficult in pop music.

target the root in pop styles

In pop music, the target chord is generally on the root of the current chord, not on a secondary root on its third or sixth, as this would inappropriately imply a larger seventh or ninth chord.

Types Of Cadences

authentic cadence

The *authentic* cadence is V-I. In a cadence to the chord C7 with Dm7-G7-C7, “C7” is the tonic chord. In the key of C, establishing “F7” as a temporary tonic, Gm7-C7-F7 could be used as a II-V-I cadence to the temporary key of F.

flat five substitute

A *flat five substitute* for the authentic cadence is bII-I. Using flat five substitutes makes chord root progression chromatic. VI-II-V-I becomes bIII-II-bII-I. See flat five substitute.

plagal cadence

The plagal or “amen” cadence is IV-I. It uses cadences down in perfect fourths, instead of up in fourths. Perfect fourths are two and one half steps and are equivalent to the interval from the first to the fourth step of a major scale, or any pair in the series 4-1-5-2-6-3-7-#4-#1, etc. A double plagal cadence is bVII-IV-I. A triple plagal cadence is bIII-bVII-IV-I. A quadruple plagal is bVI-bIII-bVII-IV-I (C-G-D-A-E), such as Hey Joe, Hush (Joe South, popularized by Deep Purple) or the “aah” middle section of Day In The Life.

deceptive cadence

Although the listener expects a song to end on the tonic chord, it doesn't have to. A song can end with a deceptive cadence, where the final chord is not the tonic chord. See [deceptive cadence](#) in [Modes](#).

Escherian cadence

An Escherian cadence is a special kind of deceptive cadence. It seems to follow the logic of a traditional cadence, but uses an auditory illusion.

Maurits Cornelis Escher's drawings displayed relationships in perspective that defy logic. Each element seems to make sense in its own right, but shouldn't co-exist with related elements. Look at his art at www.mcescher.com, especially “Waterfall”, “Ascending and Descending” and “Belevedere”.

Like Escher's art, music can suggest one thing and do another, leading you along a path of audio logic that may take an unexpected turn. A chord progression can suggest movement to a particular chord and go to another that uses a different mode or that contains the expected chord, but with a different root.

Expert magicians, like expert improvising musicians and composers are clever at distracting the audience while introducing something unexpected. A magician may distract you with one hand while sneaking something with the other. An improvising musician may use a familiar melodic phrase and by changing the right note, use the notes that will introduce an unexpected chord or key.

An Escherian cadence is a resolving chord progression that suggests a resolution to a particular mode then resolves to another. It may do this by resolving to a different mode of the same key, or to a chord that includes the implied chord, but has a different root, such as suggesting Am and resolving to Fma7, which contains Am.

TARGET CHORDS AND SETUP CHORDS

Target Chords Have Tonality

tonic chord

In music history, we have been trained that pieces should end with the main chord of the piece. That chord is called the *tonic chord* and has the primary tonality. It can be established by any combination of many criteria, including:

- ✦ frequent occurrence
- ✦ longer duration
- ✦ chord root (note after which a chord is named) movement up or down a scale to the tonic chord
- ✦ continual occurrence of the chord root of the tonic chord in the bass (even when the chord name is different, such as a G tonic chord combined with a C chord with a G bass)
- ✦ well-known chord sequences called *cadences* that we have known to establish a chord as a key

Sometimes there ambiguously may be two chords “fighting” for the sense of key, but usually one chord predominates as the tonic chord. Sometimes the ending does not sound final, and a piece may end with a *deceptive cadence*. In such a case, you are challenged to imagine what the ending chord *should be* to make the ending of the piece sound final and complete.

secondary tonalities

During each section of a song, the overall key is usually established on a particular chord. Other chords are usually established as temporary tonalities, which then progress back to the tonic chord. In treating a chord as a temporary tonality, you may use scales named after that secondary tonality chord’s root, but it is preferred to predominantly make melody with scales named after the primary tonality, which is the overall key.

target chords have primary or secondary tonalities

In this study of setup and target chords, the target chords may have primary or secondary tonalities. In either case, the melody has a sense of consonance and calm when it is on a target chord.

tonic and secondary tonic chords are based on a major or minor triad

We have been trained, again by music history, that tonic (primary or secondary) chords have a major or minor third and a perfect fifth, so they are based on a major chord (with 1, 3 and 5 of the major scale named after its root) or on a minor chord (with 1, b3 and 5 of a major scale named after its root).

Setup Chords

A setup chord are the last chord in a cadence before the target or tonic chord (temporary tonic chord). See [Superimposed Cadence Voice Leading](#).

V and bII setup chords

A harmonic cadence to a target chord can be suggested melodically by building a melodic on the core melodic tones of each of one or more chords suggested immediately before the target chord. We will first be working with a single setup chord, immediately before the target chord. Numbered in the key of the target chord, those are most commonly V chords and bII chords.

Core Melodic Tones

Experienced improvisers have practiced playing each of many scales over each common chord progression and know which notes are common to the current chord and the scale being used. I call these commonality tones *duality tones*. They are functionally the core melodic tones, those sweet notes improvisers look for. Over time improvisers gain an awareness of these duality tones and can base their improvisation on them without necessarily thinking of scales.

You need to be able to free associate while improvising. With so many ways to number these scales, the numbering can be confusing and distracting. You need a system of few numbered core melodic tones for each chord you are improvising on.

Improv Strategies

Resolve turnarounds to the target chord by step, not by skip.

Typically resolve to the root, third or fifth of the target chord: to its triad. So, if the target chord is based on suspended fourth, resolve to 1, 4 or 5. If you resolve to another chord tone, such as a seventh or ninth, consider playing one or two or more notes down the arpeggio (down in odd numbers) to “paint” the arpeggio for the listener and make it clear what the chord is.

If the last setup tone (tone of the chord before the target chord) is in the target chord, you can resolve by a skip to another chord tone. Smaller intervals are usually preferred.

MILD AND HARSH CADENCES

Cadences are harmonically milder with unaltered major scale modes. In Aeolian mode, sharpening the fifth or flattening the sixth of the parent major scale harshens the chords, by creating a major and dominant V chord (Phrygian dominant) and diminished sevenths (II dim. 7 = IV dim. 7 = bVI dim. 7 = VII dim. 7).

Full-Tertian Arpeggios

Full-tertian arpeggios can be used to extend tertian chords farther than is acceptable in sustained chords. Gm11b5b9, for example, is not an acceptable comping chord, but is usable melodically as an arpeggio (it is the same as Eb13 no root).

Some chord extensions are not acceptable because they contradict the familiar character of the chord. Flat nine on a minor chords contradicts its basic nature with too much dissonance. Dominant chords with altered fifths and ninths have drastic contrasts between the “happy” major third and the depressed or angry altered tones. Minor chords are more somber. Also, the flat nine on a dominant seventh type chord is usually associated with the diminished seventh chord, which is the remainder of a dominant seventh flat nine chord when its root is omitted.

We are used to hearing notes in thirds in melody, apart from thirds used to construct chords. So, when we hear a chord extended in arpeggio tones beyond its acceptable harmonic limit, we are forgiving of momentary dissonances.

SCALES IN SUPERIMPOSED CADENCES

Many Perspectives

Before you start using these scales, learn the relationship between the scale and the chord you are using it on. There are multiple reference notes for each scale, so each scale can be numbered many different ways. They are all useful, but must be studied individually. As you'll read below, we will focus in numbering the major scale to numbers in the key of the target chord.

Harmonic Minor Scale

This scale will be used here in the key of the target chord. A chord built on the fifth step of the harmonic minor scale in the key of the tonic chord will be the setup chord.

Melodic Minor Scale

In classical music, melodic minor scale has different ascending and descending forms. In classical music, melodic minor ascends with only the third of a major scale flat, but descends with b3, b6 and 7. This is effective to build tension ascending to "1" and descending to "5". In jazz, melodic minor is typically used (as it will be here) as a major scale with flat three ascending *and* descending.

We'll use the jazz version melodic minor scale (major b3 up or down) in two ways, one with a melodic minor scale on the root of the target chord and another with melodic minor on b6 in relation to the root of the target chord.

bVI melodic minor

The common use of melodic minor is complex. The melodic minor scale is used in the key of b6, in relation to the target chord.

The core melodic tones in this use of the bVI melodic scale should be thought of as tones of a bII13#11 chord in the key of the target chord.

The scale should be thought of as super Locrian, which is on the seventh step of the bVI melodic minor scale. So the super Locrian tone center is on the fifth of the target chord. This is getting complex. See "Too Many Numbers", below.

I melodic minor

An uncommon, but effective use of melodic minor is in the key of the target chord. It is used most effectively during a dominant type IV chord: IV7, IV9 or any part of IV13#11. Melody on that IV

chord should be more arpeggio-based, sequeing from the arpeggio tones of the IV13#11 on the fourth step of melodic minor to V7(optional #5), V9 (optional #5) or V augmented.

thinking melodic minor dominants

Think the scale fingering as super Locrian, unless the Lydian dominant fingering in the octave shape you are playing is a Mixolydian fingering you know really well with a sharp four. Locrian flat four is commonly called super Locrian. Super Locrian ascends the interval pattern half - whole - half, then four whole steps. This is almost a whole tone scale, but where the last two whole tones are replaced with half - whole - half. Check this out on a single string to see what I mean. It's like replacing the second note as you ascend a whole tone scale with two notes, one a half step above it and one a half step below it.

For both V7b9 and bII9 types, gray-backed notes are ninth arpeggio tones and black-circled notes are roots. Red notes are roots of V chords (V of the target). The remaining notes are non-chordal scale tones. Since ninths span more than an octave it can "overlap" a ninth arpeggio in another octave.

To discern one ninth arpeggio from another, one is shown in bold numbers, another in plain numbers, but all in gray-backed notes. Ascend the ninth arpeggio in the low octave (on the bass strings) up to the ninth (the last ascending note in all bold or all plain), then descend one tone to the opposite (bold or plain) and ascend the next ninth arpeggio.

Learn the modes of Melodic Minor and of Harmonic Minor

Harmonic minor and melodic minor scales may be numbered in terms of any of their modes. This needs simplification, as noted below. See [Modes/Modes Of Four Hepatonic Scales](#).

There are three ways to number a harmonic minor setup chord/scale (major sharp five parent scale, target harmonic minor key scale, Phrygian dominant chord scale). There are four ways to number a melodic minor setup chord/scale (bVI melodic minor parent scale, target Phrygian flat one target scale, a setup scale as melodic minor Lydian dominant on b2 of target and a setep scale as super Locrian [Locrian flat four] on V of the target chord. This needs simplification, as noted below.

By thinking of a harmonic minor V7b9 setup chord in key scale numbers as 5-7-2-4-b6, numbered in terms of the target chord, you can more easily figure out how to resolve to 1-3-5 (or 1-b3-5 if minor).

By thinking of a melodic minor V13#11 setup chord as b2-4-b6-7-b3-5-b7 (notice that there is both 7 and b7), numbered in terms of the target chord, you can more easily figure out how to resolve to 1-3-5 (or 1-b3-5 if minor). "7" would otherwise be "b1", since the numeration of the bII13#11 chord should otherwise be based on the key scale numbers 2-4-6-1-3-5-7 (b2-4-b6-b1-b3-5-b7). By using "7" instead of "1", you can more easily predict its stepwise movement to the target triad tone "1".

the character of harmonic and melodic minor dominants

Harmonic minor and melodic minor each have one half -whole - half regions (at 7 1 2 b3). Harmonic minor combined with Aeolian can have an additional one at 5-b6-b7-7, making a harmonic minor / Aeolian hybrid. In scalar form, this hybrid usually should not ascend 5-b6-b7-7 all the way to “1”, but should end or change direction and descend before “1”. Just a preference: ascending to “1” can work, but build such a phrase carefully. The half -whole - half regions sound middle eastern, gypsy and Spanish (because of the Moorish invasion).

In terms of the target chord using a harmonic minor setup scale, the half -whole - half region is 7-1-2-b3. Melodic minor, as we are using it is b2-b3-4-5-b6-b7-7, in terms of the target chord. In terms of the target chord using a melodic minor setup scale, the half-whole-half region is 5-b6-b7-7. Notice that this melodic minor half-whole-half region is the same as the Aeolian hybrid: 5-b6-b7-7. See the chapter [Half-Whole-Half Cells and Diminished Scale](#).

The harmonic minor V, when combined with Aeolian can have #9 (b7 of target). Otherwise, it can have a b9 (b6 of target) or #5 (b3 of target), but not a natural 9 (6 of target) nor flat five (b2 of target).

The four consecutive whole steps in melodic minor have a tormented, mad scientist, wacky, Simpsons, whole tone scale, augmented sound. Super Locrian's tone center is V of the target chord and produces the “Swiss Army” collection of altered V chords with sharp and flat five, sharp and flat nine. At the same time, the bII of target root, a flat five away from the V of target root is an exotic (#11) bII13#11 chord.

SECONDARY DOMINANTS

What Is a Secondary Dominant?

It is the V chord of any target, V of I (G is V of C in the key of C), V of V (D is V of G in the key of C), V of IV (C is V of F in the key of C), V of VI (E is V of A in the key of C, E is V of Am in the key of C), etc. See “[Modal II-V-I Cadences and Turnarounds](#)”/[Secondary Dominant](#).

The interesting secondary dominants are harmonized with harmonic minor and melodic minor. See [Secondary Roots](#) in the chapter, [Substitution](#). In our use of harmonic minor and melodic minor with cadences, we will commonly be using [Escherian cadences](#).

See also: Voice Leading Improv with Arpeggio Cadences/Graphically Voice Leading Improv with Arpeggio Cadences/[Scale-Tone Seventh Arpeggios in Perfect Fourths Order, Numbered By Parent Major Scale \(includes secondary dominants\)](#)

Harmonic Minor Practice Strategies

To use a secondary dominant with harmonic minor, play a melodic structure that suggests a cadence to a harmonic minor I minor chord, but in [Escherian](#) manner, resolve to any chord with the expected root: major seventh type (Cma7), dominant seventh type (C7), minor seventh type (Cm7), minor seventh flat five type (Cm7b5). Resolutions to other chords with a flat five are difficult to convey to the listener and should be avoided.

A [harmonic minor cadence](#) with a single chord before the target would use dominant seventh or 7b9 (with an optional sharp five to I minor (G7b9 to Cm). IIm7b5-V7(b9) I minor can also be used, a three chord cadence. We will be focusing on the two-chord cadence V7 (optional b9 and optional #5) to I minor, particularly V7b9 to Im.

V7b9 of target

V7b9 can be used as a setup chord before any target with a perfect fifth or before a minor seventh flat five chord. Other chords with altered fifths are possible, but difficult to convince the listener. The target can be major 7, dominant seventh, minor seventh or minor seventh flat five.

7b9 no root is a diminished seventh

There are only three diminished sevenths, since each has four names. Diminished seventh chords divide the octave of twelve half steps into four minor third intervals, so any of its tones can be the root. The letter names for the three diminished seventh chords are A-C-Eb-F#, B-D-F-Ab and E-G-Bb-C#.

Each of the tones with an accidental can use its enharmonic name (Eb is also D#, F# is also Gb, etc.), but these are the most common names and it is convenient to think of them this way.

practice diminished sevenths

This is an outline of the studies covered thoroughly in [Harmonic Minor Cadences/Practicing Diminished Seventh And Half-Whole-Half Cells](#). See also [Half-Whole-Half Cells and Diminished Scale](#).

Half-whole-half is a very familiar and useful melodic device. See the chapter [Half-Whole-Half Cells and Diminished Scale](#). Practice diminished sevenths for half-whole-half, first in chords, then arpeggios, then half-whole-half: II dim7, #I dim7 and I dim 7 are respectively the setup chords for the target chords I, IV and V chords and their respective families.

II diminished 7 just before the I family: I, VI (relative minor), bV or bIII (relative major)

#I diminished just before the IV family: IV-bVI-VII-II (modal relative minor)

I diminished just before the V family: V-bVII-#I-III (modal relative minor)

The two main relationships in each family are a chord and its relative minor.

II diminished 7 just before I and VI, its relative minor.

#I diminished 7 just before IV and II^m, its relative minor (modally).

I diminished 7 just before V and III^m, its relative minor (modally).

Each family is on the roots that make up a diminished seventh chord.

1-b3-b5-6 are the tones of a I dim. 7 and are the same numbers in the I family.

2-4-b6-7 are the tones of a II dim. 7 and are the same numbers as the II family.

#1-3-5-b7 are the tones of a #I dim. 7 and are the same numbers in the V family.

Chord progression in fourths with diminished 7 of (target in parenthesis) forms a chromatic pattern of diminished seventh roots:

VII (#I^o7), III (I^o7), VI (II^o7), II (#I^o7), V (I^o7), I (II^o7), IV (#I^o7), etc.

letter names for diminished sevenths

There are only three diminished seventh chords, since each can be named after either of its four notes. These three sets of letter names allow you to recall them quickly. Each of the three sets of four letter names begins with the natural notes: A-C-Eb-F#, B-D-F-Ab, E-G-Bb-C#. Don't use four versions of A-C-Eb-F#: A-C-Eb-F#, C-Eb-F#-A, Eb-F#-A-C and F#-A-C-Eb. Too much information to recall quickly when improvising.

Melodic Minor

To use a secondary dominant with melodic minor, play a melodic structure that suggests a cadence to a melodic minor I minor chord, but in [Escherian](#) manner, resolve to any chord with the expected root: major seventh type (Cma7), dominant seventh type (C7), minor seventh type (Cm7), minor seventh flat five type (Cm7b5). Resolutions to other chords with a flat five are difficult to convey to the listener and should be avoided. See [Secondary Dominant](#) and Melodically Superimposed Cadences/[Secondary Dominants](#).

We will be focusing more on a synonym of the V altered chord bII of target (part or all of Db13#11 to C, including Db7 to C). Remember, the target (C) can be any quality with a natural fifth or a minor seventh flat five chord.

super Locrian on V of the target

For any target chord with a perfect fifth, super Locrian builds a super-altered (Swiss army) seventh chord on its fifth. So the setup chord of any target can be a seventh chord with a sharped or flatted fifth or with a sharped or flatted ninth, or any combinations. That's as useful scale, but the useful chords are limited, because of their dissonance....(see the next paragraph).

the flat five substitute

Continuing the thought of the previous paragraph: "however", the flat five substitute family on the bII (Db) of the target (bII is a flatted fifth from V, Db is a flatted fifth of G) is any part of bII13#11 (Db13#11 in the key of C). This chord is the scale-tone chord on the fourth step of bVI melodic minor (Ab melodic minor for a C target). Super Locrian is on the seventh step of that melodic minor, which is the fifth of the target. See [Flat Five Substitute Chord Progression](#).

It is very useful to practice the cadence bVIm9(ma7)-bII13#11-I (any type with a perfect fifth). In making melody, first resolve to the triad of the bII chord then to the triad of the target chord, with conservative [voice leading](#) (small intervals). Within each chord, larger intervals can be used, but the last note of one chord to the first of the next should approach by heptatonic stepwise, by a minor third as part of a pentatonic scale or from the fifth of the target to the root.

practice the bVIm(ma7)-bII13#11-I cadence

Play bVIm(ma7) to bII7(13#11) chord cadences first in chords, then arpeggios, then half-whole-half (5-b6-b7-7 of target and b6-5-4-3 of major target) then with V super Locrian of target and IV Aeolian b5 of target.

Progressions for Study with Harmonic Minor and Melodic Minor

See [Harmonic Minor Cadences/Practicing Diminished Sevenths and Half-Whole Half Cells](#).

See [Melodic Minor Cadences/Practicing The bVIm9\(ma7\)-bII13#11 Cadence](#).

first target I and II in I VI II V songs:

Stand by Me (play it as a [bossa nova](#)), The Way You Look Tonight, Isn't She Lovely, I Got Rhythm B (last three bars of B to the first bar of A, treat the I-VIm as I and treat the IIm V as IIm), One Note Samba (the first eight bars is I VI II V twice, substituting IIIIm for I, bIII for V and bII for V), bars 9 and 10 of any jazz blues (see the I, IV and II jazz blues list below), Road Song (the last bar of A and the first three bars of makes VI II V I in the relative major key), All the Things You Are, Fly Me To The Moon, There Will Never Be Another You, Someday My Prince Will Come (last three bars of B and first bar of A), A Foggy Day (has VIm7b5 in A section, useful for darkening), Ornithology (the last three bars of B and the first bar of A is VI II V I), Have You Met Miss Jones?, Anthropology A (A & B are basically the same changes as I Got Rhythm), Misty, Speak Low, St. Thomas, Stormy Weather, Breezin', Caravan B, part of all of the [songs to target 7362514](#).

then target I, IV and II in jazz blues:

in F (progressive order)-Now's The Time, Au Privave, Bags' Groove, Blues for Alice

in Bb (progressive order)-Blues By Five, Sonnymoon for Two, Tenor Madness, Billie's Bounce, Bloomdido, Everyday I Have the Blues, Gibson Creek Shuffle, Excuse My Blues, One for Daddy'O

in C-C Jam Blues

In G-The Thumb

then, songs to target III and V:

III (progressive order)

Autumn Leaves (thinking in parent major), St. Thomas A, How High the Moon C (last A), Have You Met Miss Jones, Golden Lady, Anthropology B, Ornithology B and C (based on How High The Moon), Georgia A, I Got Rhythm B, I Remember B (IIIΔ7), The In Crowd, Joy Spring A, Last Train Home, Meditation, Nature Boy (thinking in parent major), One Note Samba, Peel Me a Grape (first chord), Night in Tunisia (first chord), The Days of Wine and Roses (beings the B section).

V (progressive order)

House of the Rising Sun, Grinnin' in Your Face, Me and My Uncle, The Road Song, St. James Infirmary, Paint It Black, Sugar, The Preacher, I Got Rhythm B (treat the II V as V), A Foggy Day, I Saw Her

Standing There, Santeria, Baja Nights, When the Saints Go Marching In, Tiger Rag, Anthropology B, Don't Get Around Much Anymore, Girl From Ipanema (treating bII as V and last chord in B), On Every Page (E is V), Sultans of Swing, Mediterranean Sundance/Rio Ancho, The Way, Pegao, Hotel California, The Entertainer, Round Midnight B

next, target all chords in I VI II V songs:

Use the earlier list: "first target I and II in I VI II V songs", but omit I Got Rhythm.

next, songs to target 7362514 (fourths):

(progressive order) Autumn Leaves, You Never Give Me Your Money, Fly Me to the Moon, There Will Never Be Another You, All The Things You Are, Europa, Still Got the Blues, Killing Me Softly, Black Orpheus, Days of Wine and Roses, Meditation, My Favorite Things, Yardbird Suite, Scrapple from the Apple, Take Five,

In fourths with diminished 7 of target in parenthesis:

VII (#I°7)-III (I°7)-VI (II°7)-II (#I°7)-V (I°7)-I (II°7)-IV (#I°7), etc.

With **half-whole-half** melodic structures, first target I and VI, then IV-II-VII, then V-III.

Then all of the 7-3-6-2-5-1-4 songs, playing diminished seventh structures only in the end of the bar previous to each target.

PRINCIPLES OF SUPERIMPOSED CADENCES

If you listen for the implication of short chords in improvised solos, you'll start hearing harmonic regions. Every couple of beats, another chord is sounded. Especially in jazz, but in all styles. Try listening to the music in segments of two beats (or one beat on very fast soloing like an up-tempo Pat Martino, John Coltrane, Alan Holdsworth or Charlie Parker solo), whatever would divide the improvisation into groups of about three to six notes.

Elaboration Or Substitution

Whether it is done consciously or not, a player makes their improvisation more interesting with a diversity of chord sounds. When a chord has a long duration (a bar or more), the chord progression can be elaborated by adding chords up or down a fourth, up or down a step, or dominant chords from a half step above (bII dominant chords, usually part of bII13#11). When chords are already occurring at the rate of every two beats or every beat, the improvisation can be made more interesting with substitute chord progression. See [Substitution](#).

You may be curious as to why I said "it is done consciously or not" in the last paragraph. Melody is based on what we have heard before. Over the centuries, great improvisers like Johann Sebastian Bach, John Coltrane, Chick Corea and Alan Holdsworth have put the sense of elaboration and substitution into the minds of their listeners.

Layered Chord Progression

In improvised music, each musician can establish their own version of the chord progression. While one plays a chord for two bars, another may briefly insert another chord, but largely play the same chord.

At important [hit points](#), the musicians need to sound part of the same chord, so the listener hears their harmonic agreement. Between the hit points, the musical parts can wander, preferably with structure, such as chord progression with roots moving in fourths or stepwise.

See [Phrases Built with Core Melody](#), [Cells and Filler/Build Four Tonal Layers](#) and [Tonal Layers and Target Tones](#).

Three Important Preparatory Steps

[Voice leading](#) is the intentional planning of moving each note in a chord to one in the next chord, or retaining it (on the same note). It is possible to improvise with sophisticated [voice leading](#). To do so, we need to determine the key regions, determine the parent scales for each chord and convert all of the parent scales to versions of key scales by region.

key regions

The key regions are generally the same for all the members of an ensemble. There are usually many options. It is preferable for the listener that there are few key regions in a song, often only one key.

parent scale

The parent scales allow you to have quick fretboard access to structures like scale fingerings and scale-tone chords. They are most effective with well-memorized fingerings and sequences, such as knowing the order of triads built on a scale *even when thinking them without numbering each tone*.

convert parent scales to key scales

This can all you to voice lead on the fly. See [Convert Parent Scale-Tone Chords to Key Scale-Tone Chords](#).

Superimposed Cadences in the Original Key

An authentic cadence, plagal cadence, [flat five substitute](#) or deceptive cadence may be used in the original key. See [Types of Cadences](#). Each of these would be an added cadence not in the original song.

Superimposed Cadences on Secondary Roots

three essential steps

Determine the parent scale for the chord you are playing on. To determine the optional chords you can use to think for each chord, referred to by their alternate root locations as *secondary roots*, perform these three essential steps:

1. determine the step of the parent scale on which the original chord root occurs
2. determine the step of the parent scale on which the secondary chord root occurs
3. know the scale-tone triads, sevenths and modes for the parent scale, so you can build a chord on a secondary root

regions of thirds

All of these relationships revolve around the idea of sharing regions of thirds in the tertian cycle that chords are typically built from. The cycle is shown below for the four usable heptatonic (seven tone) scales. Learn more about these scales (modes) in [Modes / Modes of four Heptatonic Scales](#).

sixths on I, II^m IV and VI of major

Chords built on I, II^m, IV or V of a major scale can have a sixth. In each of those cases, there is a tone in the parent scale that is a whole step (two frets) above the fifth. A I major triad uses 1, 3, 5 of its parent major scale, so adding “6” a whole step above its fifth makes a I6 chord. The table below shows such a relationship for each chord. The tones of VI^m7 are 6, 1, 3, 5. The tones of I6 are 1, 3, 5, 6. They share the same tones, so are synonyms.

scale-tone triad	numbers of parent scale	parent scale tone a whole step above the fifth	name of sixth chord	parent scale tones in sixth chord	synonym with a sixth version of the original chord and the chord on its sixth
I major	1-3-5	6	I6	1-3-5-6	I6 = VI ^m 7
II minor	2-4-6	7	II ^m 6	2-4-6-7	II ^m 6 = VII ^m 7b5
IV major	4-6-1	2	IV6	4-6-1-2	IV6 = II ^m 7
V major	5-7-2	3	V6	5-7-2-3	V6 = III ^m 7

ninths on I, II^m IV, V and VI^m of major

Chords built on every step of the major scale are acceptable as ninths *except* three and seven. Since each ninth chord uses five notes in thirds (see regions of thirds), it has three subset triads and two subset sevenths (tertian quadrads).

- ✦ what number of the parent scale is on the third of the current chord
- ✦ what is the quality of the triad and seventh on that note that is the third

scale-tone ninth	numbers of parent scale	subset triad on root and parent scale tones	subset seventh on root and parent tones	subset triad on third and parent scale tones	subset seventh on third and its parent scale tones	synonym for original chord and seventh on third (nr = no root)
I major	1-3-5-7-2	I, 1-3-5	Ima7, 1-3-5-7	IIIIm, 3-5-7	IIIIm7, 3-5-7-2	Ima9 nr = IIIIm7
II minor	2-4-6-1-3	IIIm, 2-4-6	IIIm7, 2-4-6-1	IV, 4-6-1	IVma7, 4-6-1-3	IIIm9 nr = IVma7
IV major	4-6-1-3-5	IV, 4-6-1	IVma7, 4-6-1-3	VIIm, 6-1-3	VIIm7, 6-1-3-5	IVma9 nr = VIIm7
V major	5-7-2-4-6	V, 5-7-2	V7, 5-7-2-4	VII dim, 7-2-4	VIIIm7b5, 7-2-4-6	V9 nr = VIIIm7b5
VI minor	6-1-3-5-7	VIIm, 6-1-3	VIIm7, 6-1-3-5	I, 1-3-5	Ima7, 1-3-5-7	VIIm9 nr = Ima7

combined sixths and ninths on I, IIIm IV and V of major

Ninth chords can use triads on their root, third or fifth. Triad structures on the fifth tend to need a little help. The chord will be clearer to the listener if the melody goes on down the arpeggio structure to the third.

Sixth chords can use triads on their sixth. I, II, IV and V type chords built on the major scale can be sixths or ninths. This means they use a sequence of *six of the seven notes of the major scale in thirds*. This makes them very flexible. Here is an example for the C major scale

scale tone	numbers of parent scale in sixth and ninth	sixth chord with C major parent	ninth chord with C major parent	subset triads on sixth, root, third and fifth of parent, numbers of parent for roots		subset seventh on sixth and root of parent, numbers of parent for roots	
I	6-1-3-5-7-2	C6	Cma9	Am, C, Em, G	6-1-3-5	Am7, Cma7	6-1
II	7-2-4-6-1-3	Dm6	Dm9	Bdim, Dm, F, Am	7-2-4-6	Bm7b5, Dm7	7-2
IV	2-4-6-1-3-5	F6	Fma9	Dm, F, Am, C	2-4-6-1	Dm7, Fma7	2-4
V	3-5-7-2-4-6	G6	G9	Em, G, Bdim, Dm	3-5-7-2	Em7, G7	3-5

minor elevenths on II and VI of major

Because of the lack of dissonance between the flatted third and the fourth of minor seventh chords, II^m7, III^m7 and VI^m7 sound reasonably consonant with an added fourth. III^m7 is not used with an added ninth, since it would be a flat nine (b9 = b2) and b9 is only acceptable on dominant type chords (with a major third and flatted seventh).

Triad structures on the seventh of a minor eleventh need a little help. The chord will be clearer to the listener if the melody goes on down the arpeggio structure occasionally, at least to the fifth.

So, minor eleventh is acceptable on steps II and VI, where the ninth is not flat. This means triad subsets can occur on the root, third or fifth and that seventh chord subsets can occur on the root or third.

- ✦ what number of the parent scale is on the third and fifth of the current chord?
- ✦ what is the qualities of the triads on the root, third or fifth?
- ✦ what is the quality of the seventh chords on third?

scale tone	numbers of parent scale in minor 11	ninth chord with C major parent	subset triads on root, third, fifth and seventh of parent, numbers of parent for roots		subset seventh on root, third and fifth of parent, numbers of parent for roots	
VI	6-1-3-5-7-2	Am11	Am, C, Em, G	6-1-3-5	Am7, Cma7, Em7	6-1-3
II	2-4-6-1-3-5	Dm11	Dm, F, Am, C	2-4-6-1	Dm7, Fma7, Am7	2-4-6

chord types on roots or secondary roots of I, IV, V and II^m

I, IV, V and II^m chords can be treated as triads or seventh chords on their sixth, root or third.

I⁶ = VI^m7, IV⁶ = II^m7, V⁶ = III^m7 and II^m6 = VII^m7b5. What is the sameness in the relationship between these four sets of chord synonyms? This is explained below.

The chord scale modes for I, IV, V and II^m chords each have a sixth. Each of those chords can be conceived as a triad with an optional added sixth a whole step above its fifth. In each case that note that would be the sixth of the chord is two tones down the scale, a minor third below the root. Each chord (I, IV V and II^m) has a synonym on the root built down two scale tones.

On a I, IV, V or II type, build chords on each tone of the relative minor (III^m tones 3, 5, 7 for a V chord). On a III, VI or VII, build chords on the triad of the chord itself.

chord types on root, third and fifth of III^m7 or III⁷

III or VI^m chords can be treated as triads or sevenths on their root, third or fifth.

A III^m7 secondary root on the fifth of the VI^m chord makes VI^m11.

For III chords, the parent scale often needs to have #5. V⁷ (G⁷) of parent built as secondary roots on the third of III (E^m) causes a b9 for the III chord, which is only acceptable if the chord is dominant: III⁷ with the formula 1, 3, 5, b7 (numbered after a major scale on the root of III).

To allow the b9, make the III chord III⁷b9 by using a parent major scale with sharp five. This changes the seventh chord on the third of III to #V^{dim}7 (G^{#dim}7 for the C major parent scale with III as "E").

chord types on root, third and fifth of VII^m7b5

See also [secondary roots](#).

As a chord, the VII^m7b5b9 is not acceptable, but it works as an arpeggio and melodically, since the dissonances are periodic and not continuous. VII⁷b5b9 (B⁷b5b9) can be substituted as a strummed chord, with a major third making it a dominant chord with acceptable b5 and b9.

For VII chords, the parent scale often needs to have b3, which creates synonyms of IV¹³#11 (F¹³#11) that are much easier to hear and think harmonically than the VII chords it creates. Possible VII chords are subsets of VII⁷b9#9b5#5, the basis of which is the VII⁷b5 synonym of IV⁷b5.

dominant type preferred for 13#11

Avoid use superimposed chords on IV⁷ or VI^m7b5 of the parent melodic minor scale for IV¹³#11 type chords. The IV⁷13#11 usually needs to be more of a dominant seventh type chord, often altered (#11 = b5), not a sixth chord. Using melodic minor II^m7 as a superimposed chord over a IV¹³#11 type would sound IV⁶, since II^m7 = IV⁶. Especially don't use the II^m7 with its root in the bass over a IV¹³#11 type.

Proxy Issues

proxy defined

With some scales, scale tones assigned one particular number can function as another. In a scale with a sharp four, that tone can be used as a flat five, then allowing both five and flat five. Scales with a flat four (melodic minor mode VII and major flat six mode five) can use the flat four as a natural three, allowing both flat three and flat three.

b4 tone in melodic minor VII chords

Mode VII in melodic minor is usually called super Locrian. It has every numbered tone flatted except “1”. The flat four is a proxy for natural three. When super Locrian (melodic minor VII) is used on the root of a m7b5, the flat four really can sound like an upper neighbor to the flat three.

When used on any part of melodic minor VII7b9#9b5#5, it is preferable that the flat third is in the upper octave and the flat four proxies as a natural third in the lower octave. So, this makes it difficult to use the system of superimposing chords.

A practical solution for the melodic minor VII7b9#9b5#5 is to use Locrian, which would impose a blue note flat three against the “proxied” natural third (flat four).

b4 tone in major b6 III chords (super phrygian)

Avoid this scale when chord needs a major 3.

Superimposed Cadences with Changed Versions Of Chords

These may be applied to superimposed cadences in the original key or on secondary roots.

darkend (bluesy) versions

I type chords can be treated like V type chords, V type chords like II type chords. This darkens the mood and is typical of blues.

brightened versions

V type chords can rarely be treated like I type chords, as long as the conflicting flat seventh and natural sevenths are not sustained or otherwise emphasized against one another too strongly. Charlie Parker commonly played on blues with a I major seventh type where the listener expected the accompaniment to play a I dominant seventh type.

Charlie Parker's accompanists typically avoided the flatted seventh of the I7 when he played I major seventh, though the listener could imagine the dominant seventh in their memory of the standard blues with I dominant seventh. Charlie's use of the major seventh seems to be part of his general brightness of mood.

well-known minor mode

For most of the last milenium, European music has primarily featured songs and melodies in major and Aeolian (or its common variant, harmonic minor). With the African influence in American music, major has been darkened with Mixolydian (with flatted seventh), and Mixolydian darkened with Dorian (with flatted third and seventh).

We still have such a strong heritage in the Aeolian mode that when a section of a song is in Dorian, we can accept Aeolian or harmonic minor melody, as long as the conflicting natural sixth of Dorian and the flatted sixth in Aeolian (or harmonic minor) are not sustained or otherwise emphasized against one another too strongly.

the subsets of the substituted chord still apply

All the subsets of V type chords can be used in place of the I type chords with the V type is substituted. Likewise, all the subsets of II type chords can be used in place of

Convert Parent Scale-Tone Chords To Key Scale-Tone Chords

practice writing down the alternate chords

Write down a chord progression with a list for each chord of the possible alternates. Learn to quickly assess what the alternate chords are.

prepare to voice-lead the progression like an arranger composer

A good arranger or composer is aware of the possible alternate chords, a great one is aware of *all* the alternates. This allows them to make a harmonic design on one chord and carry it on to the next.

Two chords in a row may share the same alternate chord, such as Em on a G7 chord followed by Em on a Cma7 chord in the key of C. In such a case, the harmonic and melodic structure on the Em used on the G7 can be thematically varied on the Cma7.

Two chords may share the same alternate chord root, with different qualities, such as C major during the C7 chord and C minor fifth of an F9 chord in a blues in C. In such a case, the harmonic variation would compare the C major and C minor, otherwise elaborating with the character of each chord.

learn to convert parent scale chords to key scale chords

It's not easy, but you can learn to convert scale-tone triads and sevenths of the parent scale (triads are usually enough) to thinking of them in the key scale. If you are using a set of parent scale-tone triads to improvise on a particular chord, it is initially easiest to think in the key of the parent scale, usually being a familiar major scale.

Learn to think the group of parent scale-tone triads both on the fretboard and in your mind in stepwise or fourths (stepwise is easier) *without* needing to associate them to a numbered order. The triads of the major scale ascend major, two minors (IIIm and IIIIm), two majors (IV major and V major), minor and diminished. Start with any particular chord thinking of its location according to the grouping of chords by quality, such as V as the second of the two majors (in ascending) and ascend the order *renumbering them*. As you ascend from the second of two majors, use the usual order: major (the "old V"), minor, diminished, major (the "old I"), two minors (the "old IIIm and IIIIm"), etc.; but renumber them with the old V as I through the old IV as bVII. Whichever mode you are calculating, you use its altered numbers, such as "b3 and b7" for Dorian and proceed through the usual order of triads.

Once you can think with all the triads in the same key for a region in that key, you can voice lead on the fly.

SUPERIMPOSED CADENCE VOICE LEADING

Voice Leading Defined

Voice leading is the creative design of voices in chords, treating the chords as an ensemble, made of voices. The succession of all of the top notes of a series of chords creates the top voice, commonly called the soprano. The succession of all of the bottom notes of a series of chords creates the bottom voice, commonly called the bass. With four voices, the next-to-top voice is called the alto and the next to bottom voice is the tenor. So, a series of chords can be thought of as a collection of voices or parts.

Principles Of Voice Leading in Superimposed Cadences

retain common tones

It is preferred that notes are retained (don't change from chord to chord), when possible. This makes less work for the listener and allows the listener to focus on other important parts of a composition.

move by small intervals

It is also preferred that when notes cannot be retained, they change by small intervals, making it easier for the listener. An exception is moving all voices up on the same chord, which is easy for the listener to follow.

dominant and flat five substitute voice leading

In this cadence voice leading study, we are using two-chord and three-chord authentic or flat five substitute cadences. See [Flat Five Substitute Chord Progression](#).

core melodic tones

Core melodic tones are common to a key scale that is being used to make the melody and to the chord. The most important core melodic tones for the dominant (G7) or [flat five substitute](#) (Db7) chord or the tonic chord (C7) are the root, third and fifth of each. We need to transition those core tones with [voice leading](#) so the listener can understand the melody by being able to predict it to a reasonable degree.

make "singable" melodies

The listener will usually like your melody more if they can understand it. It needs to be melody they can think in a vocal sense, so hypothetically they could "sing it back to you". Some of your melody will be mechanical licks that can't necessarily be sung, but be sure to make a large part of it "singable".

Generally, make the melody understandable. You may have to reinforce a melody that uses two dis-related scales by using theme and variation or otherwise showing the commonality of the two scales.

don't change mood too quickly

Cadences can radically change the scale. This usually changes the mood. We are using many modes of major, harmonic minor and melodic minor. Modes are named after the Greek word *modus*, which means mood.

Some scale changes may involve most notes changing but still be understandable when one scale is largely the same as the next, but in a different key, chromatically up or down. For example, Db Lydian dominant (1-2-3-#4-5-6-b7) can be used before C Mixolydian (1-2-3-4-5-6-b7) and your melodic structure could communicate the similarity, such as playing "1-3-5" in Db, then "1-3-5" in C.

chromatic notes can be confusing

In some situations, two notes could be used chromatically below and one or two notes chromatically above a note they will resolve to. This can be confusing to listen to. The "Bb, Cb (B) and Db" of Ab melodic minor could be used during a Db7 chord. If they resolve to "E" in the C7 chord that follows them, it is hard to understand.

Simpler chromatic sequences can be understandable, such as "Eb, D, Db, B", then "C", which encircles C and starts with a chord tone of a C minor chord.

Incorporating 1-2-3-5 and 1-3-4-5

These two fragment patterns are very effective in sounding each chord in a cadence in four-note cells such as four eighths or four sixteenths, straight or swing on either. The links below will take you to many such cells in all keys:

Ab A Bb B C Db D Eb E F F# G

Four Categories Of Voice Leading

The four categories of voice leading in superimposed cadences are fourths, stepwise, chromatic and pedal point. They typically consist of two or three chords. All of the two-chord cadences are the last two chords of a three-chord cadence. So, by studying the three-chord cadences, you'll know the two-chord ones.

We'll look at each of the four types, then at which chords should be emphasized by aligning the phrase so a particular chord is played at the beginning of a target chord or at an important metric location like the first or third beat in 4/4. The "hit points" intended for the first or third beat of the bar can be "pushed" or played a half beat early to provide a "jazzy" rhythmic feel.

Look for these primary types chord progression in each song you play:

roots in fourths

- ✦ ascend 7-3-6-2-5-1-4-7-3-6, et cetera; in letters B-E-A-D-G-C-F-B-E-A (“Bead” Go Catch Fish), et cetera
- ✦ descend 4-1-5-2-6-3-7-4-1-5, et cetera; in letters F-C-G-D-A-E-B, et cetera or descend F-C-G-D-A-E-B, [flat five substitutes](#)

roots ascending or descending stepwise

Chord progression based on the roots of the chords ascending or descending a seven tone scale.

chromatic [voice leading](#)

- ✦ stepwise chord progression where the chords are connected with one or more voices moving chromatically, including I-#I^o7-II^m, V-#V^o7-VI^m, I7-I^o7-II^m6-I, I -I/3-IV-#IV^{dim}.

pedal point progression

variants of fourths or stepwise progression with a pedal tone

- ✦ thirds and pedal, especially I-IV-I7 no fifth
- ✦ triads and pedal, especially I6 no5 to I9 no root, no third

Root Movement in Fourths or Fifths

The oldest cadence is V I (G to C in the key of “C”), called the *authentic cadence* in classical music. It is a root movement up a fourth (or down a fifth, which is to the same note in the lower octave). This cadence was successively repeated as chord progression developed, by first using “V of V” to establish V as a temporary key. By the time European music evolved to American Jazz, fourths were extended to include the entire scale in the order 7-3-6-2-5-1-4.

A list of jazz songs that use the entire “7-3-6-2-5-1-4” root sequence is shown below. The steps of a key scale on which chord roots occur is traditionally shown in Roman numerals, but I’ll list them in Arabic numerals (7-3-6-2-5-1-4) when there is a long sequence. The “VII” usually starts somewhere in the middle of a section, then the progression cycles back to “I”, then “IV”.

See [All Scale Tone Chords/The Cycle of Fourths on the Major Scale](#).

Stepwise Root Movement

Chord roots moving up or down the scale in alphabetical order are in stepwise order. This progression has a processional nature, as most or all notes move up or down one scale tone in tandem, such as a I chord with 1-3-5 moving to a IIm chord with 2-4-6. See [All Scale Tone Chords/The Stepwise Cycle on the Major Scale](#).

Chromatic Chord Progression

When chords are a whole step apart, a chord can be inserted between them. If two chords are of the same quality, the chord in between can be of the same quality as well. The in-between chord can also be major.

Superimposed chromatic chord progression are not used much in pop music, but very common to jazz-related music.

lower chromatic embellishment chord progression

Chords can be approached with a chord of the same quality with one a half step below. When a single note is approached from a non-scalar tone (a note not in the current scale), it is called a *lower chromatic embellishment*. So, when this is down with chords, it could be called a *lower chromatic embellishment chord progression*. This is more often applied to chords with a major basis, like major (C), major seventh (Cma7) or dominant seventh (C7) chords.

Chords approached with a root a half step above are usually [flat five substitutes](#), shown below.

flat five substitute chord progression

Flat five substitutes can convert root movement in fourths to chromatic root movement. The perfect fourth root progression $\text{IIIIm7-VIm7-IIIm7-V7-Ima7}$ ($\text{Em7-Am7-Dm7-G7-Cma7}$) can be converted to the chromatic root progression $\text{IIIIm7-bIII7-IIIm7-II7-Ima7}$ ($\text{Em7-Eb7-Em7-Db7-Cma7}$) by using a flat five substitute for every second chord.

Remember, the classic cadence is the authentic cadence, V to I. A [flat five substitute](#) chord replaces the chord on the fifth of the target chord with one a flat fifth above or below the root of the chord on the fifth of the tonic. This changes hanging II-V7-I to II-bII-I . The note a flat fifth above or below any given note is the same note.

Superimposed chord progression with [flat five substitutes](#) is generally not used in pop music, but very commonly used in jazz-related music.

The [flat five substitute](#) becomes a chord built on the upper chromatic neighbor to the tonic, on the root up a half step (one fret) from the root of the intended tonic chord. It could be thought of as a “bII” chord.

The [flat five substitute](#) is based on the synonym $\text{V7b5} = \text{bII7b5}$. In chord progression, bII chords are usually part of bII13\#11 , which is melodic minor mode IV, Lydian Dominant (Lydian flat seven: 1-2-3-#4-5-6-b7). Modes of any seven tone scale are synonyms of one another, since they all have the same notes. The IV13\#11 chord on the fourth of melodic minor is used for bII chords, while its synonym VII7b5\#5b9\#9 (the “Swiss Army” seventh chord) is its [flat five substitute](#), used for the V of I.

So, you could say $\text{bII13\#11} = \text{V7b5\#5b9\#9}$. $\text{bVI13\#11 V I} = \text{II7b5\#5b9\#9 V I}$

Study bVI13\#11 V7 Im and $\text{II7b5\#5b9\#9 V7 Im}$ extensively. They are optional three-chord cadences where the first chord could be bVI, which is bII of V or the [flat five substitute](#) for bVI, which is II (or V of V). Any part of bVI13\#11 can be used, such as bVI7 or bVI9 . Any part of II7b5\#5b9\#9 can be used, such as II7b5 , II7\#5 , II7b9 or II7\#9 .

Think of the bVI13\#11 as an arpeggio and of the II7b5\#5b9\#9 as a II super Locrian scale (V Phrygian flat one).

See “[Substitution](#)”/Flat Five Substitute. Also see “[Scale Ambiguity](#)”/Ambiguous Scale For Dominant Chords/[VII super Locrian](#), [IV Lydian Diminished](#) and the [flat five substitute](#).

Pedal Point Progression

Pedal point progression a treatment of other types of progression by repeating a particular note in the bass. This has been done so routinely with certain progressions that pedal point progression has taken on a nature of its own. See [Pedal Point Chord Progression](#).

Inserting Chromatic Chords

Where two chords with roots a whole step apart are of the same quality, such as IIm and IIIIm or IV major and V major, a chord can be inserted in-between of the same quality. This makes IIm-#IIm-IIIIm, IIIIm-bIIIIm-IIm, IV-#IV-V, and -bV-IV.

Melodic minor (ascending version, same as major scale flat three) has IV and V, IV7 and V7, IV9 and V9, VI dim. and VII dim., VIm7b5 and VIIIm7b5. Providing many possible chromatic insertions of the same quality.

Where chords a whole step apart are of different qualities, such as I and IIm, insert major triad between I-#I-IIm or IIm-bII-I. With seventh or larger chords with descending roots, insert dominant seventh between, such as VIm7-bVI7-V7. With seventh or larger chords with ascending roots, insert diminished seventh between, such as Ima7-#Idim7-IIm7.

Parallel Major Triads

The most convincing abstract use of chords of the same quality is major triads. Pat Metheny makes common use of this. Move bIII major chromatically down to I major, bVII major down to V major. IV major chromatically all the way down to I.

the wacky major triad at diminished fifth intervals

Suggesting the flat five relationship, major triads can be played at intervals of a diminished fifth (same as an augmented fourth, three whole steps). This has a cool, wacky, “other worldly” sound. Try it on something modern and jazzy.

COMBINING FOURTHS AND STEPWISE

Since pop music is based more on triads, there are fewer chords synonyms, therefore fewer possible superimposed progressions. Three-chord progressions need to end on the target in pop music. In jazz-related music they can start on the target, establish a sequence of fourths or stepwise root movement the veer off into something new. Triad progression with substitution and superimposition is more confined.

In both jazz and pop styles, three-chord progressions that combine stepwise and fourths work best ending on the target chord, since they are not establishing a strong repeating root pattern like three roots in fourths or three stepwise roots. .

So, use any combination of stepwise and fourths root movement, but always with the target on the last. Chords on numbered steps of the scale are usually represented by Roman numerals, but I've used Arabic numbers here for ease of reading.

up a step, up a fourth versions are: 1-2-5, 2-3-6, 3-4-7, 4-5-1, 5-6-2, 6-7-3, 7-1-4

down a step, up a fourth versions are: 2-1-5, 3-2-6, 4-3-7, 5-4-1, 6-5-2, 7-6-3, 1-7-4

up a fourth, up a step versions are: 1-4-5, 2-5-6, 3-6-7, 4-7-1, 5-1-2, 6-2-3, 7-3-4

down a fourth, up a step versions are: 7-4-5, 1-5-6, 2-6-7, 3-7-1, 4-1-2, 5-2-3, 6-3-4

MODAL CONTEXTS AND TIME

Think in Multiple Modal Contexts

Any mode you will use in any key has the letter that name the setup chord scale, the target chord scale and the key scale. If the key is “C” and the target chord is F and the setup chord scale is Db melodic minor, be able to:

- ✦ Think in terms of the mode named after the target chord (“F”) with the letter “F” in Db melodic minor, which is F Lydian flat one (Fb) on the flat third of Db melodic minor.
- ✦ Think in terms of the setup chord, Gb13#11, think in the mode with the letter “Gb”, which is “Gb” Lydian dominant on the fourth step of Db melodic minor.
- ✦ Think in terms of the key of C, think in the mode with the letter “C”, which is “C” super Locrian on the seventh step of Db melodic minor.

So, be able to think the same notes in terms of the setup chord, the target chord and the key. The target chord may be the same as the tonic chord that names the key.

modes of Db melodic minor scale

Db melodic minor	Eb Dorian flat two	F Phrygian flat one (Fb)	Gb Lydian flat seven (Lydian dominant)	Ab Mixolydian flat six	Bb Aeolian flat five	C Locrian flat four (super locrian)
b3	b2	b1	b7	b6	b5	b4
1-2-b3-4-5-6-7	1-b2-b3-4-5-6-b7	b1-b2-b3-4-5-b6-b7	1-2-3-#4-5-6-b7	1-2-3-4-5-b6-b7	1-2-b3-4-b5-b6-b7	1-b2-b3-b4-b5-b6-b7

Think in Terms of the Setup Chord’s Scale

The **setup chord** is the last chord in the cadence before the **target chord**. In a three-chord Dm7 - G7 - C7 cadence that resolves to (sounds finished on) Cma7, the Cma7 is the target chord. G7 is the setup chord that leads to the target chord.

To get oriented to the tones of the setup chord, name the setup chord scale in terms of the mode that uses the letter of the setup root. This will usually make it easier for you to create melody during the setup chord. Don’t stop there, you also need to state the tonality of the key and suggest movement to the target chord.

a secondary root of the setup chord

By thinking of a [secondary root](#) for the setup chord, you can obtain different colors and moods by using a synonym or subset of the setup chord. For example, use IV (F) Aeolian flat five on the third of a bII9 (Db) chord. This allows you to use dark minor (Aeolian) key melodies with a flat five that you may already know and create new sounds with them in this new setting.

Think in Terms of the Target Chord's Scale

Include strong references to a target chord scale by being able to think in the mode named after the letter of its root. As with the setup chord, this will make it easier for you to find and sound tones of the target tone chord. Also state the tonality of the key, as discussed next.

a secondary root for the target chord

By thinking of a [secondary root](#) for the target chord, you can create a kind of [deceptive cadence](#). When the listener expects VIm (Am), having heard VI(A) harmonic minor, it can resolve to a chord that includes VIm, such as I6 (C6) or IVma7 (Fma7).

Think in Terms of the Key Scale

Include strong references to a key scale by being able to think in key scale. You don't have to always refer to the key scale in your melody, but you should refer to it enough that the key scale predominates the tonality.

Each chord in a progression can be treated as many optional chords that are subsets or altered versions such as darkened ones with flatted notes. So, for each chord there is a conceptual list of chords it can be thought of as. A composer or arranger conceives such lists and voice leads from one chord to the next, taking advantage of similarities and patterns.

Best Scales to “Think” on Jazz Blues In C

	C7	C7 blue	F7	A7	Dm7	G7	G7 blue	G7 very blue
target chord parent scale	F major	Bb major	Bb major	F major #5	C major	C major	F major	Bb major
think as	C Mixo.	C Dorian	C Dorian	C Mixo. #1	C major	C major	C Mixo.	C Dorian
melodic minor before target	Ab melodic minor		Db mel. m.	F mel. min.	Bb mel. m.	Eb melodic minor		
best to think V super Locrian, IV Aeolian b5, bII13#11	G super Locrian, F Aeolian b5 on third of Db13#11		C sup. Loc., Bb Ae. b5 on third of Gb13#11	E sup. Loc., D Ae. b5, on third of Bb13#11 or C Mixo. b6	A sup. Loc., G Ae b5 on third of Eb13#11	D super Locrian or C Aeolian b5 on the third of Ab13#11		
harmonic minor before target	C harmonic minor = Eb major #5		F har. min. = Ab ma. #5	A har. min. = C maj. #5	D har. m. = F ma. #5	G har. min. = Bb major #5		
best to think:a	C harmonic minor = Eb major #5 or G harmonic minor* = Bb major #5 = C Dorian #4		C Phrygian dominant	C major #5	C Mixo. #1	C Dorian #4		

in summary, use...

Melodic minor tone center down a major third from the target root, which is a diagonal shape on the bass strings. Major sharp five (for harmonic minor on the target) with its tone center a minor third above the target. You can also say melodic minor targets a root on its major third (though it has a flat third) and harmonic minor targets a root on its sixth.

* Used during IV diminished 7(F#dim7). This special case is chromatic and common to blues. I diminished 7 (I°7, C°7) = #IV°7 (F#°7) to I7 (C7), where all tones other than the root move up chromatically.

Be Aware of the Listeners Time-Based Tolerance for Discord

As you emulate a super imposed cadence with your melody, one or more of the chords you emulate may have a strong disagreement with the current chord. The effects of discord are time-based.

Build your melody in time from the end of the setup chord “backward” in time, being able to play it longer.

MAKING MELODY WITH SUPERIMPOSED CADENCES

Set Up Your Practice

strum the chords, then play cells, then make melody

First strum the new chords over the chord progression. Then represent the new chord progression with strong [melodic cells](#) (groups of three to six notes) such as “1235” in the chord scale for each chord to get the harmonic sense of the new progression. Finally, start to abstract the progression with melodic ideas you commonly use. Start moving all around the fretboard.

Listen to your imagination. It can create much more complex things than your logical mind, but with fuzzier definition. When you like something new you’ve created or discovered, figure out its nature in a general sense and populate as much of your music as can with it. See [Globalizing Musical Structure and Design](#).

Most of this is numbered and thought of in terms of the [parent scale](#).

prepare with comping rhythms

Determine one or more appropriate [comping rhythms](#) to use in playing the chord progression. Comping rhythms will give you a rhythmic grid (of two, three, four or six parts per beat) and an environment to create melody.

Learn The Original Chord Progression

First practice playing chords with the accompaniment. You’ll clearly hear any dissonances, since all the notes are sustaining against the accompaniment.

Play the target chord at a “[hit point](#)” at the beginning of the chord or on a strong beat, like the first or third beat in 4/4. First practice playing a chord before the target chord that is down a fourth. Use the series of fourths: 7-3-6-2-5-1-4, For a I chord, precede it with V. For a V chord, precede it with II^m, and so on.

Use the [Put It Where You Want It II V rhythm track](#) to practice each of the two exercises below. Below them there is a detailed study directed at your visualization of the chord and scale tones you will need to improvise on the progression.

- A/G form:** Shows arcs between 1-3, 3-5, and 5-1. The small grid shows 1, 3, 5, 1, 3, 5, 1, 3.
- D/C form:** Shows arcs between 1-3, 3-5, and 5-1. The small grid shows 1, 3, 5, 1, 3, 5, 1, 3.

Practice major scale-tone seventh chord progression with “descend five and seven voicing”. See: [Voice Leading/Perfect Fourth Quadrad Cadences/Descend Five and Seven](#). Keep it simple. Just play one chord before the target.

Descend five and seven **voice leading** progresses roots up in perfect fourths, like IIm7 to V7. It uses exclusively four-note chords. On each string in descend five and seven voice leading, each note either trades root and fifth or it trades third and seventh. This means that in a perfect fourth sequence of chords that uses descend five and seven voice leading, if a note on one chord is a fifth, the next chord will have a root on that string (trading root and fifth). On a string where third occurs in one chord will be a fifth in the next chord.

As you can read in the “descend five and seven” links above, roots and thirds each are retained. The same note that is the root of one chord is the fifth of the next chord. Likewise, the same note that is a third of one chord will become the seventh of the next. Fifths and sevenths each descend to become roots and sevenths (respectively) in the next chord. A fifth of one chord descends one scale tone in the parent scale to become the root of the next. A seventh of one chord likewise descends in the parent scale to become the third of the next chord.

If we focus on strings one through four (the four smallest strings) with root and fifth trading in the bass, the Cm7 (IIm7 of parent) is 0015b7b3 and the F7 (V of parent) is 00513b7. The generic 001573 family (including 001573, 0015b73, 0015b7b3 and 001b5b7b3) trades with the generic family 005137 (including 005137, 00513b7, 0051b3b7 and 00b51b3b7). In summary, 001573 trades with 005137.

On the four smallest strings with third and seventh trading in the bass, the Cm7 (IIm7 of parent) is 00b7b351 and the F7 (V of parent) is 003b715. The generic 007351 family (including 007351, 00b7351, 00b7b351 and 00b7b3b51) trades with the generic family 003715 (including 003715, 0051b3b7 and 00b51b3b7). In summary, 007351 trades with 003715.

Why bother with all this detail? You’ll get faster and faster at recalling the descend five and seven voicings until you memorize all the versions on string sets 5-4-3-2, 6-4-3-2, 4-3-2-1 and 5-3-2-1. Then that part of your visualization for improv will be very robust and you will be a much more capable soloist and composer.

The pentatonic subsets C minor pentatonic (Cm7/11) and F major pentatonic (Fma6/9) of the Bb major scale are shown below. See [Pentatonic Fingering](#), [Scales for Songs in All Keys](#) and [Key Scales](#), [Parent Scales](#) and [Chord Scales/Parent Scale](#) and [Key Scale Fingerings](#).

sixth type root alternatives on I, IV, V and IIm

I, IV, V and IIm type chords built on the major scale have alternate roots on their sixth, root and third. They have the potential to be a sixth chord and each has a synonym minor seventh chord down two steps (see “chord on sixth/result” in the table below). Each chord can be a seventh chord, or many other types, but the fact that they all have perfect fifths and major sixths makes them similar. The mode in which each occurs (I major, II Dorian, IV Lydian and V Mixolydian) contains a major pentatonic scale (major 6/9 pentatonic), except Dorian contains major pentatonic scale with a flatted third (minor 6/9 pentatonic).

The IIm chord falls into this category when it can be a IIm6 type chord, which has a strong reference to swing music, especially when the tone “6” is used melodically as a lower neighbor to the chord root.

To remember those alternate roots for I, IV, V and II type chords, think of the numbered tones of the parent scale-tone triad down two scale tones: 6-1-3 for the I chord, 2-4-6 for the IV chord, 3-5-7 for the V chord and 7-2-4 for the II chord.

Here’s a table for I, IV, V and IIm chords with parenthetical examples for the key of C major:

major scale-tone chord	chord on third/result	chord on sixth/result
Ima7 (Cma7)	IIIm7 (Em7) / Ima9 (Cma9)	VIIm7 (Am7) / I6 (C6)
IVma7 (Fma7)	VIIm7 (Am7) / IVma9 (Fma9)	IIm7 (Dm7) / IV6 (F6)
V7 (G7)	VIIIm7b5 (Bm7b5) / V9 (G9)	IIIm7 (Em7) / V6 (G6)
IIIm7 (Dm7)	IVma7 (Fma7) / IIm9 (Dm9)	VIIIm7b5 (Bm7b5) / IIm6 (Dm6)

seventh type root alternatives on IIm, III, VIIm and VIIIm7b5

IIm, IIIIm, VIIm and VIIIm7b5 type chords built on the major scale have alternate roots on their root third or fifth. The IIm chord is in both groups. In each case the root alternative on the fifth of one of these chords makes a part of a five-note chord.

In the case of the IIIIm7 and VIIIm7b5, roots on their fifth should only be used melodically, since the chord result is not currently acceptable. Some [special accommodations](#) need to be made for the III and VII chords. The IIIIm or IIIIm7 are often changed to III or III7, requiring a sharp five of the parent scale.

As a chord, the VIIIm7b5b9 is not acceptable, but it works as an arpeggio and melodically, since the dissonances are periodic and not continuous. VII7b5b9 (B7b5b9) can be substituted as a strummed chord, with a major third making it a dominant chord with acceptable b5 and b9.

Here's a table for IIm III, VIm and VII chords, with parenthetical examples for the key of C major:

major scale-tone chord	chord on third/result	chord on fifth/result
IIm7 (Dm7)	IVma7 (Fma7) / IIm9 (Dm9)	VIm7 (Am7) / IIm11 (Dm11)
IIIm7 (Em7)	V6 (G6) = Em7	n/a
IIIm7 (E7)	#Vdim.7 (G#dim.7) / III7b9 (E7b9)	VII dim.7 (Bdim.7) / III7b9 (E7b9)
VIm7 (Am7)	Ima7 (Cma7) / VIm9 (Am9)	IIIm7 (Em7) / VIm11 (Am11)
VIIIm7b5 (Bm7b5)	IIm (Dm7b5) / IIm7b5b9 (Bm7b5b9)*	IVma7 (Fma7) / VIIIm11b5b9 (Bm11b5b9)

* acceptable as an arpeggio or melodically, but not as a chord

Eventually, you should play long sequences of fourths and stepwise, forward or backward and target the right chord on the hit point.

Learn To Represent The Progression With Melodic Cells

The shortest note sequences are [melodic cells](#), typically three to six notes. Short licks, repeating fragment patterns such as 1-2-3-5 on the chord scale for each chord, arpeggios or pentatonic scales are all cells. See the chapter [Melodic Cells](#).

Arpeggio cells are a great way to learn the clusters of tones in the parent scale that make up each chord as shown in the [Harmonic Clusters](#) section of [Phrases Built with Core Melody, Elaboration and Filler](#).

For the most common scale-tone chord progression, roots ascending in fourths, play four-note seventh arpeggios as cells with descend five and seven voicing. Through this, you will quickly learn the geometric shapes of tones for each chord as a subset of the parent scale in a confined fretboard area. Play root, third, fifth and seventh ascending one chord, then descend the fifth and seventh each one scale tone. The descending arpeggio will be the scale-tone chord up a fourth. Repeat the same process ascending third-fifth-seventh-root, fifth-seventh-root-third and seventh-root-third-fifth. This will take you through the inversions of the arpeggios.

chord roots in fourths

Fourths ascend 7-3-6-2-5-1-4-7-3-6-2-5 in numbers or B-E-A-D-G-C-F in letters. Fourths descend 4-1-5-2-6-3-7-4-1-5 in numbers or F-C-G-D-A-E-B in letters.

Practice descend seven voicing (major scale-tone seventh chords) in scale-tone seventh chords. In “sets of five fourths” below, each underlined number is a target, to be placed at a [hit point](#).

“3-6-2-5-1” can make five different cadences. “6-2” would precede the target IIm7 with VIm7. “3-6-2” would precede the target IIm with IIIIm-VIm, making the cadence IIIIm7-VIm7-IIm7 (with IIm7 on a hit point). “6-2-5” (VIm7-IIm7-V7) would put IIm7 on a hit point and then need to resolve to tones of whatever chord is in the accompaniment after V7 (the last chord in the 625 cadence). “2-5-1” would place IIm7 on a hit point, followed by V7 Ima7, then resolve to tones of whatever chord is in the accompaniment after Ima7 is played.

All of these sequences fourths can also be played in reverse order, making an order down in fourths or up in fifths. “3-6-2-5-1” in reverse makes 5-2, 1-5-2, 5-2-6, 2-6 (resolve afterward) and 2-6-3 (resolve afterward).

sets of five fourths

	sixth	root	third
sets of 5 (shown for “4” or “2”):	3-6-2-5-1	5-1-4-7-3	7-3-6-2-5
sets of 5 (shown for “1” or “6”):	7-3-6-2-5	2-5-1-4-7	4-7-3-6-2
sets of 5 (shown for “5” or “3”):	4-7-3-6-2	6-2-5-1-4	1-4-7-3-6
sets of 5 (shown for “2” or “7”):	1-4-7-3-6	3-6-2-5-1	5-1-4-7-3
summary:	1-4-7-3-6-2-5-1-4-7-3-6-2-5-1-4-7-3-6-2-5-1-4-7-3-6-2-5-1		

stepwise chord roots

Stepwise ascend or descend; connect with chromatic prog. (incl. I-#I^o7-II^m, V-#V^o7-VI^m, I7-I^o7-II^m6-I, I-I/3-IV-#IVdim).

“7-1-2-3-4” can make five different cadences. “1-2” would precede the target II^m7 with I^ma7. “7-1-2” would precede the target II^m with VII^m7b5-I^ma7, making the cadence VII^m7b5-I^ma7-II^m7 (with II^m7 on a hit point). “1-2-3” (I^ma7-II^m7-III^m7) would put II^m7 on a hit point after preceding it with I^ma7 and then need to resolve to tones of whatever chord is in the accompaniment after III7 (the last chord in the 1-2-3 cadence). “2-3” would place II^m7 on a hit point, followed by III^m7, then resolve to tones of whatever chord is in the accompaniment after III^ma7 is played. “2-3-4” would place II^m7 on a hit point, followed by III^m7 and IV^ma7, then resolve to tones of whatever chord is in the accompaniment after IV^ma7 is played.

All of these stepwise sequences can also be played in reverse order, making an order down stepwise. “7-1-2-3-4” in reverse makes 3-2, 4-3-2, 2-1 (resolve afterward) and 2-1-7 (resolve afterward).

sets of 5 (shown for “5” or “3”):	1-2-3-4-5	3-4-5-6-7	5-6-7-1-2
sets of 5 (shown for “2” or “7”):	5-6-7-1-2	7-1-2-3-4	2-3-4-5-6
summary:	5-6-7-1-2-3-4-5-6-7-1-2-3-4-5-6-7-1-2-3		

Create Melody

Once you have clearly demonstrated the sound of the chords and cells over the progression, aligning with the hit points, start to abstract the progression by playing the cells with harmonic theme and variation or with melodic ideas you commonly use.

Once you have the harmonic progression “in your ear” and its placement phrase-wise, start playing variations of the cell or something similar to represent it. As you play repeatedly over the progression, get more and more abstract. Move progressively more freely around the fretboard, changing positions and octaves. Freedom!

Work extensively in each octave shape of the fretboard until you can visualize the chords, scales and arpeggio of each common mode. Progressively learn other fretboard areas, learning the structures in relation to each [triad](#) [arc](#), octave shape and major scale fingering area.

chunking and multiple contexts

In 1956, George Miller, of Princeton University's Department of Psychology published a paper titled "The Magic Number Seven, plus or minus Two", also called "Miller's Law". In it, he described a human ability to retain about seven objects (numbers, letters, graphic shapes, etc.) in working memory.

Miller and other psychologists have indicated compensations we can use to work around our limitations. Two important compensations are chunking and multiple contexts. With chunking, we develop a strong memory of a group of objects (a chunk). Multiple contexts can strengthen the memory of a chunk.

When we improvise on an area of the fretboard, we need to know the mass of notes in each small area, such as the eight or nine notes of a major scale on three consecutive strings. We can get a very strong memory of those notes by memorizing them in these multiple ways, including chords and arpeggios, scales and licks.

chords and arpeggios

- ✦ the major and minor arcs that make up each of the seven triads built on the major scale
- ✦ the major scale-tone descend five and seven voicings on the relevant set of four strings
- ✦ pentatonic subsets of the scale
- ✦ building ninth arpeggios from pentatonic scales in the area

scales

- ✦ the linear major scale fingering:
- ✦ the major scale lines that make up each three-note-per-string fingering
- ✦ building each three-note-per-string major scale fingering with the master pattern
- ✦ making each in-position fingering by combining two three-note-per-string major scale fingerings

licks

- ✦ a mental library of licks that use the scale
- ✦ the emotive function of each note, so you can predict its sound and emotive before playing it

visual scanning versus mass visualization

Using the chunking methods above, you can get a vivid memory of the notes in a fretboard area and begin experimenting.

Use mass visualization for smaller numbers of items such as the six notes in each triad arcs or the three to six notes in a chord fingering. Use visual and conceptual scanning for around ten to twenty items, such as major scale lines, or pentatonic lines.

Once you have chunked a group of items, such as well-memorized major scale lines, you can conceive combining them, such as visualizing an in-position major scale fingering by combining three major scale lines.

Each group of notes or items (such as rhythmic words) has a different degree of clarity versus fuzziness for you. Make your visualization more clear with multiple points of reference and repetition.

the vast power of the creative mind

I advocate experimenting, free association and improv on a musical idea, followed by interpretation and globalizing. Most of the time, I am amazed at what ideas come up when I have worked creatively, then interpret what I have discovered. You probably have a perfectly good brain and can do the same thing.

The Two Second Rule

With superimposed cadences, you will often play chord sounds that briefly don't harmonize with the accompaniment. This is often called "outside", versus "inside", where "inside" harmonizes with the accompaniment and "outside" doesn't.

The current chord might be C7, but you are playing something that represents Gb7 to transition to the next chord F7. If the Gb7 chord or melodic content is played for two seconds or less and then resolves to F7, it will probably make sense to the listener. If the Gb7 is played for more than two seconds, the listener is likely to have the time to realize that it is not harmonizing with the current chord and it might not sound correct to many listeners.

So, generally play cadences and other content that doesn't harmonize with the current chord for two seconds or less. At 120 beats per minute, two seconds is four beats. At 60 beats per minute, two seconds is only two beats. So something that doesn't harmonize with accompaniment can work for one bar at 120 BPM, but not at 60 BPM.

HARMONIC MINOR CADENCES

See also: [Melodic Minor Cadences](#).

Practicing Diminished Sevenths and **Half-Whole-Half Cells**

As you practice the material in this section, begin to look forward to the theory shown in the remainder of this Harmonic Minor Cadences section. Be sure to read [Cadence Defined](#) and [Secondary Dominant](#) first.

See [Progressions For Study with Harmonic Minor and Melodic Minor](#) for suggested songs to study.

Half-whole-half is a very familiar and useful melodic device. See the chapter [Half-Whole-Half Cells and Diminished Scale](#). Below, we'll learn to practice diminished sevenths for half-whole-half, first in chords, then arpeggios, then half-whole-half.

diminished seventh families

There are only three unique diminished seventh chords, since each one can use four names. As a quick way to find them for any particular key, think of them as II dim7, #I dim7 and I dim 7. Those three diminished sevenths respectively makeup the setup chords for the target chords I, IV and V chords and their respective families.

II diminished 7 just before the I family: I, VI (relative minor), bV or bIII (relative major)

#I diminished just before the IV family: IV-bVI-VII-II (modal relative minor)

I diminished just before the V family: V-bVII-#I-III (modal relative minor)

See [practice diminished sevenths](#).

Develop strong memories: restrict your playing to the first three strings, then two strings 4-3-2-1, then 4-3-2-1, 5-4-3-2, then all of the strings. Spend a long time with each string set.

Spend at least a half hour on each of these four steps:

First, play the entire progression with a II dim7 arpeggio before the I and the VIm chords only.

Next, play the entire progression with #I dim7 arpeggio before the IIm chord only.

Next, play the entire progression with I dim7 arpeggio before the V chord only.

Next, play the entire progression the appropriate arpeggio before each chord.

Last, repeat the four steps using [half-whole-half cells](#).

Stand By Me in A in V position

Improvise in the fifth position area, generally keeping your first finger at the fifth fret.

Improvise in the ninth position area, generally keeping your first finger at the ninth fret.

In seventh chords progress below with their roots in ascending order of perfect fourths. Each chord is preceded with a with diminished seventh chord whose root is a half step below the target.

VIIIm7b5-(#II dim7)-IIIm7-(#V dim7)-VIm-(#I dim7)-IIIm7-(#IV dim7)-V-(VII dim7)-Ima7 (III dim7)-IV (#IV dim7)-VIIIm7b5, etc.

Harmonic Minor is Mode VI of Major Sharp Five

From our perspective of European music based on the major scale and Greek modes, harmonic minor scale is a dramatized version of Aeolian mode. It strengthens the harmonic progression in the minor key so the V - Im cadence has a major V chord, as in a major key. Also, the VII diminished seventh (VII^o7) and its three synonyms (VII^o7=II^o7=IV^o7=bVI^o7) are tension-producing sources of cadences to the Im chord and to other chords a half step above or a whole step below their roots.

Harmonic minor is the mode on the sixth step of major sharp five scale. Compared to Aeolian mode (the mode on the sixth step of the major scale), it has a natural seven, while harmonic minor has a flat seven. See also [Melodic Minor Cadences](#).

Think the Harmonic Minor Tone Center

In [harmonic minor cadences](#), you give the impression that you are progressing to the minor key named after the harmonic minor scale you are using. You may actually go to the key named after letter of the harmonic scale, but in different mode like major or Mixolydian. So, you may use A harmonic minor and progress to A major seventh in the key of A major.

You may progress to a chord that *contains* the minor chord named after the letter of the harmonic minor scale you are using, but with a different root. For example, you may be using A harmonic minor and progress to Fma7, which has the notes of Am.

Think the Key Scale with the Same Letter as the Harmonic Minor Scale

Every type of seven tone scale in any key uses all seven letters of the musical alphabet (A - B - C- D- E- F- G) and uses each letter only once. So, whatever seven-tone scale you are using, you *can* name it after the letter of the key.

It is very important to think in terms of the key. The listener aurally expects it.

target chord →	I7 (C7)	IV7 (F7)	V7 (G7)	VI7 (A7)	IIm7 (Dm7)
implied scale (commonly changed at resolution)	C harmonic minor	F harmonic minor	G harmonic minor	A harmonic minor	D harmonic minor
key scale	I (C) harmonic minor	I (C) Phrygian dominant	I (C) Dorian sharp four	I (C) Major sharp five	I (C) Mixolydian sharp one (C#)

First Learn to Improvise Aurally with the Scales

Improv with aurally intuition first, before engaging your left brain into much thought in numbers and letters. To use elements of theory afterward in your improv, you need to learn the theory thoroughly. Learn the necessary harmonic minor scale fingering and the location of the root, third and fifth of the chord it will resolve to.

Begin with Harmonic Minor to Aeolian (Relative Minor)

use these three steps:

1. improvise on VIIm with minor blues
2. emphasize the tones of VI minor using the parent major scale
3. include the sharped fifth of the parent major scale, but without drawing attention to it

Practice this first, to get an aural sense of the authentic minor cadence. Using the C major parent scale, this puts the key on six minor, A minor. To dramatize and strengthen the cadence to VIIm (Am), the III chord is changed to major or seventh, so III major, III7, III7#5, III7b9 or III7b9#5 (all "E" chords before Am) are used before the VIIm (Am).

minor cadences

The minor key is traditionally derived by establishing major scale tone six as the tone center. With the C major scale, this means making Am the key. Parent major scale tone III(E) major (altered from III minor) to VI minor (E to Am) is the authentic minor cadence. In the key of Am, E - Am is re-numbered as V to Im. See the table below.

	Em	E	Am
C major parent scale number from root	IIIIm	III (major)	VIIm
A minor key scale from each root	Vm	V	Im

Cadences are traditionally made in fourths. The entire sequence of fourths in the major scale is 7 - 3 - 6 - 2 - 5 - 1 - 4. A two-chord cadence in fourths establishing VIIm (Am) as the key is III VIIm (E Am) of the parent scale (C major). This is V - Im in the key scale.

A three chord cadence establishing VI (Am) is VIIIm7b5 III VIIm (Bm7b5 E Am). Re-numbering VIIm as Im, to make it the key, 7 - 3 - 6 becomes 2 - 5 - 1, mimicking the common 2 - 5 - 1 (Dm G C) used in a major key. So, VIIIm7b5 III7 VIIm7 in a major key is re-numbered IIm7b5 V7 Im in the relative minor.

	Bm7b5	E7	Am
C major parent scale number from root	VIIIm7b5	III7	VIIm
A minor key scale from each root	IIm7b5	V7	Im

1. improvise on VIIm with minor blues

To make authentic, jazz must have the blues element. So, start your study in using harmonic minor with minor pentatonic and add the harmonic minor carefully as you develop the melodic style. Establish VIIm (Am) of the parent major scale (C major) as a key with A minor pentatonic blues melody. Use some flat five tones (Eb notes), making Am7/11b5 scale.

Use [Minor Pentatonic Blues Rock Cells](#) as a resource. They are written in G minor, so you'll need to move them up a whole step (two frets toward the body of the guitar).

2. emphasize VIIm tones and use the entire parent major scale

Next, make it a point to emphasize tones of the VI minor (A minor) triad during the VIIm (Am) chord in the chord progression. Use the entire parent major scale, but continue the VIIm blues basis.

A minor pentatonic
subset of A Aeolian (C major)
fingering 2 VII

A minor
arpeggio VII

C major scale
fingering 7 VII

C major sharp five
fingering 7 VII

3. include the sharpened fifth of the parent major scale

Include the sharpened fifth of the parent major scale, making VI harmonic minor. Continue to use VIIm (Am) blues as a basis. The goal is to use the harmonic minor scale to establish the VIIm chord, which does not include the sharp five. VIIm7 has a "5" of the parent scale, being made with 6 - 1 - 3 - 5 of the parent scale. Sharp five is dissonant against five, so it should be de-emphasized.

Use the sharpened fifth unobtrusively. Avoid starting or ending phrases with it. Use it as a lower neighbor to the sixth step of the parent major scale. Use the sharpened fifth in a scale passage.

A minor II V rhythm tracks

The rhythm tracks linked use the progression: ||: Am7 | E7 | Am7 | Bm7b5 E7 :||

[Am7_E7_Am7_Bm7b5E7_Otis](#)

[Am7_E7_Am7_Bm7b5E7_SamDave](#)

[Am7_E7_Am7_Bm7b5E7_StevieW](#)

Next, Use VI_m During I and IV_{ma}7

An Escherian cadence is a resolving chord progression that suggests a resolution to a particular mode then resolves to another. It may do this by resolving to a different mode of the same key, or to a chord that includes the implied chord, but has as different root, such as suggesting Am and resolving to F_{ma}7, which contains Am. See [Melodically Superimposed Cadences/Escherian Cadence](#).

In Escher-like fashion, sound VI_m (Am) just before or during C and/or FΔ7, predicting the Am part of I₆ (C₆) or IV_{ma}7 (F_{ma}7). Strengthen your melodies with familiar minor themes with VI (A) harmonic minor that sound the VI_m (Am) more than the III₇ (E₇, which is V₇ of Am). The Am chord below is part of C₆ and F_{ma}7.

VI_m (Am) is major scale tones 6-1-3. I₆ (C₆) is major scale tones 1-3-5-6. IV_{ma}7 (F_{ma}7) is major scale tones 4-6-1-3. Both I₆ (C₆) and IV_{ma}7 (F_{ma}7) contain 6-1-3, the notes of VI_m (Am). See the circle of thirds (below) from which they are built.

Use these three steps:

1. improvise on I (6, 7 or ma7) and IVma7 with I major pentatonic
2. emphasize VIIm tones using the parent major scale
3. include the sharpened fifth of the parent major scale

harmonic minor scale fingerings 7 and 3

C major sharp five
fingering 3 XI

1. improvise on I and IVma7 with I major pentatonic

Base your melody on I (C) major pentatonic, in swing blues style.

Use [Major Pentatonic Swing Cells](#) as a resource. They are written in G major, so you'll need to move them up two and a half steps (five frets toward the body of the guitar) or down three and a half steps (seven frets toward the head of the guitar).

2. emphasize VIIm tones using the parent major scale

Emphasize the VIIm (Am) chord tones as part of I6 (C6) or IVma7 (Fma7). Continue to use swing blues as a basis. In the swing blues style, the blue notes flat three and flat seven can be included. Flat seven changes the I major scale to I Mixolydian. Flat three and flat seven (both) change I major to I Dorian. Usually, if three is flat, seven is flattened also, to make the more familiar Dorian mode instead of melodic minor (major flat three is melodic minor).

3. include the sharpened fifth of the parent major scale

Include the sharpened fifth of the parent major scale, making VI harmonic minor. Continue to use I major pentatonic and swing blues (in the key of I) as a basis. The goal is to use the harmonic minor scale to establish the VIIm chord sound as part of I6 (C6) or IVma7 (Fma7) in [Escher](#) fashion. See [Melodically Superimposed Cadences/Escherian Cadence](#)

I major and IVma9 have "5" of the parent scale. I major is 1- 3- 5 of the parent scale. IVma9 is 4-6-1-3-5 of the parent. Although IVma7 does not literally include tone five of the parent scale, it implies it. Sharp five is dissonant against five, so it should be de-emphasized.

Use the sharpened fifth unobtrusively. Avoid starting or ending phrases with it. Use it as a lower neighbor to the sixth step of the parent major scale. Use the sharpened fifth in a scale passage.

an optional preview of Mixolydian sharp one

During the later part of V7 (G7) before I (C), use chord scale V (G) Mixolydian #1, which is the same notes as A harmonic minor. Like a magician (see [Melodically Superimposed Cadences/Escherian Cadence](#)), this will attract the listener to the major blues melody on G7, but bring in the middle-eastern sounding harmonic minor scale as well. Here are the modes of C major sharp five to support this idea:

modes of C major sharp five scale for VI harmonic minor

Using Mixolydian Sharp One

Harmonic minor occurs as a mode on the sixth step of major sharp five scale. Mixolydian sharp one is the mode on the fifth step of major scale five. In many situations, Mixolydian can be established, then altered to Mixolydian sharp one, which becomes the same notes as harmonic minor up a half step.

the magic trick

This provides the opportunity to distract the listener with familiar Mixolydian melody in blues or jazz styles, while changing the scale to harmonic minor to suggest an upcoming minor chord *or* to suggest a minor chord as part of another chord.

mode of major sharp five	major sharp five	Dorian sharp four	Phrygian dominant (natural third)	Lydian sharp two	Mixolydian sharp one	Aeolian natural seven (harmonic minor)	Locrian natural six
summary chord	ma9#5 (4-6)	m13#11	7b9b13	13#11	13#1 °7 (b2-b4-b6)	m9(ma7)	dim. 7

	Gb	Ab	Bb	Cb	D	Eb	F

I Mixolydian Sharp One before II Harmonic Minor

theory summary: C Mixolydian sharp one

In the modes of major sharp five, the mode on the sixth step is harmonic minor. The mode on the fifth step (see below) is Mixolydian sharp one. This is very convenient! To suggest the key of II minor when it follows I, I Mixolydian can be first established, then altered. Theme and variation works well for this.

II minor is not as common after I as is VI, then IIm. The most common four-chord progression in jazz is I-VI-IIm-V (VI can be minor and still treated melodically as major or dominant). The nickname for this progression is “rhythm changes”, both because it is a common progression in a rhythm section and is the main progression of the classic Gershwin song “I Got Rhythm”.

In the I-VI-IIm-V progression, suggest the key of II minor by playing I Mixolydian during the I chord, then I Mixolydian sharp one during the VI chord. I Mixolydian sharp one is the same notes as II harmonic minor and aurally predicts it.

To apply this to jazz blues in C, play C Mixolydian during the C chord in bar 7, then C Mixolydian sharp one during the A7 chord in bar 8. C Mixolydian sharp one (C#) is the same notes as D harmonic minor, so it will predict the Dm chord in bar nine.

The mode on the sharpened fifth of F major sharp five is C Mixolydian sharp one (C Mixolydian which a “C#”). The mode on the sixth step of F major sharp five is D harmonic minor. Of course, all the modes of F major sharp five have the same notes. See the table below:

modes of major sharp five scale

F major sharp five	G Dorian sharp four	A Phrygian dominant (natural third)	Bb Lydian sharp two	C Mixolydian sharp one (C#)	D Aeolian natural seven (harmonic minor)	E Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	natural 6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

By recalling and using C Mixolydian melodies and licks that you otherwise would use on a C7 type chord *and sharpening the C (C#)*, you can easily build a repurposed library of licks for the A7b9 chord. This works particularly well because A7b9 no root is C#diminished seventh and C7 with “C” changed to C# is A7b9 no root.

voice leading V of IIm tones to IIm

V Harmonic Minor in Bar Six of Jazz Blues in C

theory summary: F Mixolydian sharp one

Imply the Vm (Gm) part of the I9 chord in bar seven by playing IV Mixolydian sharp one in bar six, empassizing the tones of F sharp diminished seventh, the VII chord in G harmonic minor (sharp five Mixolydian sharp one).

In the modes of Bb major sharp five, the mode on the fifth step is F Mixolydian sharp one (tone center F#). The mode on the sixth step is G harmonic minor. Play F Mixolydian melodic ideas in bar six, but with “F’s” changed to “F#’s”. This will create G harmonic minor and suggest the Gm part of the C9 chord and allow you to repurpose your F Mixolydian melodic ideas. See the table below:

modes of Bb major sharp five scale for V harmonic minor

Bb major sharp five	C Dorian sharp four	D Phrygian dominant (natural third)	Eb Lydian sharp two	F Mixolydian sharp one (F#, with F#dim.7)	G Aeolian natural seven (harmonic minor)	A Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	natural 6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

theory summary: suggest the G minor part of C9 with G harmonic minor

C9 is built on the fifth step of an F major scale. It uses scale tones 5-7-2-4-6 of F major. As you probably know scale tones 2-4-6 of a major scale makeup a IIm chord. In the diagram of a C9 arpeggio, the numbered tones of the F major scale with a white background, “2, 4 and 6” are the tones of the G minor chord.

theory summary: C Dorian #4

The fifth, seventh and ninth of the F9 arpeggio are the root, third and fifth of Cm. As shown on the table above, F Mixolydian sharp one (Bb major sharp five) can be thought in terms of a key scale with the mode “C Dorian sharp four”.

By thinking in C, you can retain the sense of key and use theme and variation to transition to the C7 chord that follows, using C Mixolydian or C Dorian (darker, bluesier) on the C7.

Harmonic Minor to Major or Mixolydian Targets

For a dominant to tonic cadence (G7 to C7 or Dm7b5 G7 C7), use the bIII major sharp five scale (Eb major sharp five for a C tonic chord) to create a harmonic minor scale in the key of the tonic chord to target the root, third and fifth tones (core melodic) of the tonic chord.

voice leading the tones of harmonic minor V to I

<u>tones of V7b9</u>	<u>V tones in key of 1</u>	<u>voice lead V7b9 to I (various types)</u>
1	5	retain to become fifth of I
3	7	up to root of I
5	2	down to root of I
b7	4	up to fifth of I
b2	b6	down to fifth of I
b13(#5)	b3	down to ninth or root of I (or any Im tone)

In summary, resolve tones of V7b9 to the root or fifth of I or resolve the b7 of V to 3 of I. Prefer resolving to 5 with key scale b7, b6, 5 instead of 7, b6 5 (key scale tone b7 makes Vm7 and I Aeolian during the V chord).

jazz blues In C

Many of the examples in this section use Jazz Blues in C. The progression is shown below. You should also see [Modes/Modes On Jazz Blues](#) and especially [Jazz Blues Key Scales](#).

C7 (I7)	F7 (I7)	C7 (I7)	C7 (I7)
F7 (IV7)	F#dim7 (IV7)	C7 (I7)	A7 (VI7)
Dm7 (IIIm7)	G7 (V7)	C7 (I7) A7 (VI7)	Dm7 (IIIm7) G7 (V7)

Application Of Harmonic Minor Cadences

[Harmonic minor cadences](#) can be applied to any chord with a perfect fifth, with different degrees of effectiveness. The classic minor II V I cadence is most effective in jazz blues in the key of IIIm, using the VI chord (A7) in bar eight as a V of IIIm (Dm). In bar six, #IV diminished seven can be elaborated with V harmonic minor, suggesting the V minor part of I9. The I or IV chords can each be preceded with harmonic minor in the key of their root by emphasizing the tones of V7b9 in each harmonic minor scale. All of these will be covered in detail below.

Harmonic Minor before I , IV or V

harmonic minor dominants to I, IV and V

This is the most straight-forward use of harmonic minor in major keys (such as jazz blues) but not the most common. The most common use is II harmonic minor during VI7 preceding a IIm chord. Dominant chords are built on the fifth step of the scale named after the tonic. V7 (G7) is the dominant seventh chord for I (C or Cm). With secondary dominants, you precede a temporary tonic with its V chord, such as C7 before F, where C7 is V7 in the key of F. See [Secondary Dominant](#) and [Melodically Superimposed Cadences/Secondary Dominants](#).

In a bar immediately before I, play I harmonic minor (C harmonic minor), which is the mode on the sixth step of bIII major sharp five scale (Eb major sharp five scale). I harmonic minor can also be used in the middle of a long duration of I (such as bars three and four in a twelve bar blues), but make sure use it early enough to establish the resolution to I, before moving on to another chord.

modes of bIII (Eb) major sharp five scale for I (C) harmonic minor

Eb major sharp five	F Dorian sharp four	G Phrygian dominant (natural third)	Ab Lydian sharp two	Bb Mixolydian sharp one (B)	C Aeolian natural seven (harmonic minor)	D Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	#6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

In a bar immediately before IV (F), play IV harmonic minor (F harmonic minor), which is the mode on the sixth step of bVI major sharp five scale (Ab major sharp five scale). As with I harmonic minor, IV harmonic minor can also be used in the middle of a long duration of IV (such as bars five and six where they are both the IV chord). Use it early enough to establish the resolution to IV, before moving on to another chord.

modes of Ab major sharp five scale for IV harmonic minor

Ab major sharp five	Bb Dorian sharp four	C Phrygian dominant (natural third)	Db Lydian sharp two	Eb Mixolydian sharp one (E)	F Aeolian natural seven (harmonic minor)	G Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	#6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

In a bar immediately before V (G), play V harmonic minor (G harmonic minor), which is the mode on the sixth step of bVI major sharp five scale (Bb major sharp five scale). As with I harmonic minor, V harmonic minor can also be used in the middle of a long duration of V (not available in a jazz blues). Use it early enough to establish the resolution to IV, before moving on to another chord.

modes of Bb major sharp five scale for IV harmonic minor

Bb major sharp five	C Dorian sharp four	D Phrygian dominant (natural third)	Eb Lydian sharp two	F Mixolydian sharp one (F#)	G Aeolian natural seven (harmonic minor)	A Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	#6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

theory summary: suggest the C minor part of F9 with C harmonic minor

F9 is built on the fifth step of a Bb major scale. It uses scale tones 5, 7, 2, 4, 6 of Bb major. As you probably know scale tones 2, 4, 6 of a major scale make up a IIm chord. In the diagram of a F9 arpeggio, the numbered tones of the Bb major scale with a white background, “2, 4 and 6” are the tones of the C minor chord.

The mode on the sixth step of Eb major sharp five is C harmonic minor. By using C harmonic minor in bar four, you can suggest that the next chord (in bar five) will be C minor, but it will in fact be F9 with C minor as part of it.

modes of Eb major sharp five scale for I harmonic minor

Eb major sharp five	F Dorian sharp four	G Phrygian dominant (natural third)	Ab Lydian sharp two	Bb Mixolydian sharp one (B)	C Aeolian natural seven (harmonic minor)	D Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	#6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

voice leading

Learn to voice-lead each tone of G7b9 to Cm to use before I7 and to voice-lead each tone of C7b9 to Fm before IV7. Use the voice leading table shown earlier. For the I7 chord (C7), voice-lead V7b9 to I in the key of I (G7b9 to C). For the IV7 chord (F7), voice lead V7b9 to I in the key of IV (C7b9 to F).

V Harmonic Minor in Bar Nine of Jazz Blues in C

theory summary: expect G minor, get G dominant seventh

Imply the Vm (Gm) version of the V chord in bar ten by playing V harmonic minor in bar nine with D7b9, the V dominant chord of G harmonic minor. In the modes of Bb major sharp five, the mode on the sixth step is G harmonic minor. Hearing G harmonic minor in bar nine, the listener would expect a G minor chord in bar ten, but will hear a G7 chord. See the table below:

modes of Bb major sharp five scale for V harmonic minor

Bb major sharp five	C Dorian sharp four	D Phrygian dominant (natural third)	Eb Lydian sharp two	F Mixolydian sharp one (F#)	G Aeolian natural seven (harmonic minor)	A Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	natural 6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

theory summary: C Dorian #4

The fifth, seventh and ninth of the F9 arpeggio are the root, third and fifth of Cm. As shown on the table above, F Mixolydian sharp one (Bb major sharp five, tone center on F#) can be thought in terms of a key scale with the mode “C Dorian sharp four”.

By thinking in C, you can retain the sense of key and use theme and variation to transition to the C7 chord that follows, using C Mixolydian or C Dorian (darker, bluesier) on the C7.

VI Harmonic Minor Before I or VI^m of Jazz Blues in C

theory summary: expect A minor, get A7

Imply the Am playing VI harmonic minor in bar seven with E7b9, the V dominant chord of A harmonic minor. In the modes of C major sharp five, the mode on the sixth step is A harmonic minor. Hearing A harmonic minor in bar seven, the listener would expect an A minor chord in bar eight, but will hear an A7 (or A7b9) chord. See the table below:

modes of C major sharp five scale for VI harmonic minor

C major sharp five	D Dorian sharp four	E Phrygian dominant (natural third)	F Lydian sharp two	G Mixolydian sharp one (G#)	A Aeolian natural seven (harmonic minor)	B Locrian natural six
#5	#4	natural 3	#2	#1	natural seven	natural 6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

theory summary: expect A minor, get C6

Imply the Am playing VI harmonic minor before any C7 with E7b9, the V dominant chord of A harmonic minor. In the modes of C major sharp five, the mode on the sixth step is A harmonic minor. The listener would expect an A minor chord, but will hear a C7 chord, which can easily be imagined as C6. C6 contains A minor. C6 has the notes "C, E, G and A", while A minor has "A, C and E. See the table above.

A Theory Summary for Every Major Sharp Five Mode

major sharp five is the parent scale for harmonic minor

Parent scales are major scales or major scales with a simple alteration. By using a major scale or simply altered major scale as a point of reference, we can use a well-known set of fingerings, scale-tone chords, and chord progression to relate to the modes of that scale. The parent scale for A harmonic minor is C major sharp five scale. By thinking of the modes we know of C major and sharpening the “G” on each of them, we can conceive the modes of C major sharp five, which has A harmonic minor on its sixth step. See the tables below, and [the modes of major sharp five in all keys](#).

C major	D Dorian	E Phrygian	F Lydian	G Mixolydian	A Aeolian	B Locrian
#5	#4	natural 3	#2	#1	natural seven	natural 6
1-2-3-4-#5-6-7	1-2-b3-#4-5-6-b7	1-b2-3-4-5-b6-b7	1-#2-3-#4-5-6-7	#1,-2-3-4-5-6-b7	1-2-b3-4-5-b6-7	1-b2-b3-4-b5-6-b7

theory summary: parent scale I major sharp five

This will represent the parent scale III augmented (key scale V augmented) with its synonym, parent scale I augmented (key scale bIII augmented).

The triad basis of C major sharp five is C augmented. Like diminished seventh chords, augmented triads are made from a repeating interval. Augmented triads are repeating major thirds. Augmented triads major third from the root to the third, a major third from the third to the sharpened fifth *and* a major third from the sharpened fifth to the octave. Since the intervals are all equal, any note in the augmented triad can be the root, making three synonyms. C augmented = E augmented = G# augmented.

The minor authentic V - I cadence uses III (E) of a parent major scale changed to major (which makes the parent scale major sharp five, since a three major triad uses scale tones 3, #5, 7) for the V chord and VI_m of the parent major scale for the I chord, as you can see below.

parent major by number →	I major	II Dorian	III Phrygian	IV Lydian	V Mixolydian	VI Aeolian	VII Locrian
parent major by letter →	C major	D Dorian	E Phrygian	F Lydian	G Mixolydian	A Aeolian	B Locrian
parent major sharp five by letter →	C major #5	D Dorian #4	E Phrygian natural 3	F Lydian #2	G Mixolydian #1 (G#)	A Aeolian natural seven (harmonic minor)	B Locrian natural six
parent major sharp five by number →	I major #5	II Dorian #4	III Phrygian natural 3	IV Lydian #2	V Mixolydian #1 (G#)	VI Aeo. nat. 7 (har. minor)	VII Locrian natural six
re-number for har- monic minor →	bIII major #5	IV Dorian #4	V Phrygian natural 3	bVI Lydian #2	VII Mixolyd- ian #1 (G#)	I harmonic minor (Aeo. nat. 7)	II Locrian natural six

The authentic V - I cadence (D to Am) can be modified to V augmented (E augmented) to Im. In terms of the parent scale, this cadence is III augmented to VI_m. Since III augmented (E augmented) = I augmented (C augmented), you could play I augmented (C augmented) and be playing the same notes as III augmented. So to emulate the cadence III augmented to VI_m of the parent scale (which is V augmented to Im in the key scale), you can think I augmented to VI_m (C augmented to VI_m). If such a cadence were composed into a piece, the bass would play III of the parent scale ("E"), while the melody treated the III augmented as I augmented, since they are synonyms.

The target key scale I chord can be changed to I dominant type (major with b7) or I major type (major with natural seven).

theory summary: parent scale II Dorian sharp four

Key scale VII diminished seventh is a synonym of V7b9 no root. Represent the key scale V7b9 to I minor cadence with II diminished seventh to I minor, since key scale VII[°]7 = II[°]7 (= IV[°]7 = VI[°]7)). In terms of the parent scale, VII[°]7, II[°]7, IV[°]7 and VI[°]7 are respectively #V[°]7, VII[°]7, II[°]7 and IV[°]7.

The key scale II diminished seventh ([°]7) to V augmented to Im (B dim. E aug. Am) cadence (see [theory summary: parent scale III Phrygian dominant](#)) could also be thought of as II[°]7 - I augmented - Im, since key scale V augmented (E augmented) is a synonym of I augmented (C augmented).

Use your vocabulary of Dorian phrases, but sharp the fourth, making Dorian sharp four. Play them in key scale IV (D Dorian sharp four before an Am target). Since they will represent VII diminished seventh ([°]7), bring out the tones of IV[°]7, which is a synonym of VII[°]7.

As usual, the target key scale chord doesn't have to be I minor, but can be I dominant type (major with b7) or I major type (major with natural seven).

The hybrid Aeolian and harmonic minor scale includes the notes of both. It is like Aeolian with both a flatted seventh and a natural seventh. This scale is not harmonizable in the traditional sense, but it is useful melodically. The mode on the fourth step of this scale would be Dorian *add sharp four*, and would have both four and sharp four in the key of the Dorian scale. Four and sharp four of the temporary Dorian key can be used in phrases that treat the sharp four as a flat five and avoid ascending from flat five (sharp four) up to five. Likewise, use of the hybrid Aeolian and harmonic minor scale should avoid ascending from natural seven to one, which is relatively the same pair of notes as its "Dorian add sharp four" modes' sharp four and five.

See also [Theory Summary: C Dorian Sharp Four](#).

theory summary: parent scale III Phrygian dominant

This is the classic V chord (E) of the authentic minor V - I cadence. See [harmonic minor dominants to I, IV and V](#) and [modes of bIII \(Eb\) major sharp five for I \(C\) harmonic minor](#).

Be sure to also explore the key scale II diminished seven to V augmented to Im (B dim. E aug. Am) cadence.

theory summary: parent scale IV Lydian #2

Use parent scale IVm(ma7), constructed with parent scale 4, #5 (proxies as b6), 1, b3. Or use the hybrid Aeolian and harmonic minor scale (see above) to create IVm9(ma7). In either case, the parent scale III augmented (= #V aug. = I aug.) part of the IVm(ma7) or IVm9(ma7) can cadence to the parent scale VIm. Elaborate with parent scale IV Lydian #2. In terms of key scale, this is bVI Lydian sharp two, with the cadence bVIm(ma7) to Im, where the bVIm(ma7) contains V augmented, emulating the V augmented Im cadence. The usual options for I7 and Ima7 target types apply.

Key scale VII diminished seventh (°7) is a synonym of V7b9 no root. Using the synonyms of diminished seventh chords in the major sharp five parent scale, VII°7 = II°7 = IV°7 = VI°7 (key scale #V°7, VII°7, II°7 and IV°7), represent the key scale VII diminished seventh (°7) to I minor cadence with IV diminished seventh to I minor.

The key scale II diminished seventh (°7) to V augmented to Im (B dim. E aug. Am) cadence could also be thought of as IV°7 - I augmented - Im, since key scale IV°7 (D°7) is a synonym of II°7 (B°7) and V augmented (E augmented) is a synonym of I augmented (C augmented).

theory summary: major parent scale V Mixolydian #1

See [theory summary: C Mixolydian sharp one](#), which uses the synonyms modes of major sharp five parent scale V Mixolydian sharp one and VI harmonic minor.

See [theory summary: F Mixolydian sharp one](#), which uses the synonyms modes of major sharp five parent scale V Mixolydian sharp one and VI harmonic minor in the key of V harmonic minor to suggest the V minor part of the I9 chord that the IV7b9 will resolve to.

theory summary: parent scale VI harmonic minor (Aeolian natural seven)

This is the same as the classic V chord (E) of the authentic minor V - I cadence discussed in [theory summary: parent scale III Phrygian dominant](#), but from the perspective of the target chord. The target is implied as a minor chord, using harmonic minor scale in the key of the target chord *before* the target chord, emphasizing its V7b9 tones.

See [harmonic minor dominants to I, IV and V](#) and [modes of bIII \(Eb\) major sharp five for I \(C\) harmonic minor](#).

Be sure to also explore the key scale II diminished seven to V augmented to Im (B dim. E aug. Am) cadence.

theory summary: parent scale VII Locrian natural six

Key scale VII diminished seventh ($^{\circ}7$) is a synonym of V7b9 no root.

The key scale II diminished seventh ($^{\circ}7$) to V augmented to Im (B dim. E aug. Am) cadence could also be thought of as IV $^{\circ}7$ - I augmented - Im, since key scale VII $^{\circ}7$ (G $^{\circ}7$) is a synonym of II $^{\circ}7$ (B $^{\circ}7$) and V augmented (E augmented) is a synonym of I augmented (C augmented).

More Harmonic Minor Theory Summaries

theory summary: voice leading with key scales

For both comping and soloing, thinking versions all of the scales named after the tone center ("C" in C jazz blues) can make it much easier to see relationships for theme and variation and for [voice leading](#). It is quite a chore to learn all of the modes as key scales (all in "C", for example), but worth the effort.

On the table "[harmonic minor modes used for secondary dominant \(V of I, IV, V, VI or IIm\)](#)", you can find a mode for every melodic minor scale that names it with the letter "C", for the key of "C".

Here is a key scale summary of the [harmonic minor mode table](#):

target tonic chord →	C7 tonic	F7 temp. tonic	G7 temp. tonic	A7 temp. tonic	Dm7 temp. tonic
key scale used during V7b9 of tonic	C harmonic minor	C Phrygian dominant	C Dorian sharp four	C major sharp five	C Mixolydian sharp one (C#)
implied tonic chord scale (usually changed at resolution)	C harmonic minor	F harmonic minor	G harmonic minor	A harmonic minor	D harmonic minor
V of tonic	G7b9	C7b9	D7b9	E7b9	A7b9
key scale formula	1, 2, b3, 4, 5, b6, 7 (of C)	1, b2, b3, b4, b5, b6, b7 (of C)	1, 2, b3, #4, 5, 6, b7 (of C)	1, 2, 3, 4, #5, 6, 7 (of C)	#1, 2, 3, 4, 5, 6, b7 (of C)
parent major #5 scale	Eb major sharp five	Ab major sharp five	Bb major sharp five	C major sharp five	F major sharp five

theory summary: pedal point triads

For both comping and soloing (as usual), you can create a wealth of harmonic and melodic structures based on scale-tone triads. If you're more excited about single-note soloing than comping (which is typical) be aware that the triad structures can be thought of a template to build single note melodic lines.

In Pedal Point Triads/Modal Triad Improv, you can learn to build chords and melodies with triads. It also directs you to [Scale-Tone Arpeggios and Pentatonics/Building Triad Arcs](#), where you can go through a set of the seven major scale in-position fingerings to get an overview of the full-fretboard triad structure.

Harmonic Minor Cadences to Each Chord in Jazz Blues

Using a IIm7b5 to V7b9 cadence in the appropriate key, *every* chord in a jazz blues can be approached with a harmonic minor cadence. I'm using the term "grandparent" major here (upper left of the table) to refer to the major scale which was altered to produce the major sharp five scale (including the harmonic minor mode) on its sixth step.

table of harmonic minor modes used for secondary dominant (V) of I, IV, V, VI or IIm

See Modal II-V-I Cadences and Turnarounds/[Secondary Dominant](#) and Melodically Superimposed Cadences/[Secondary Dominants](#).

altered tone of grandparent major scale →		#5	#4	natural 3	#2	#1	natural seven	natural six

MELODIC MINOR CADENCES

See also: [Harmonic Minor Cadences](#).

Melodic minor cadences work better to major targets. Of the minor modes, melodic minor resolves best to Phrygian, like in Night In Tunisia. See [Prime Scales, Chords and Arpeggios/Melodic Minor Scale Fingerings](#).

Practicing the bVIIm9(ma7)-bII13#11 Cadence

As you practice the material in this section, begin to look forward to the theory shown in the remainder of this Harmonic Minor Cadences section. Be sure to read [Cadence Defined](#) and [Secondary Dominants](#) first.

See [Progressions For Study With Harmonic Minor And Melodic Minor](#) for suggested songs to study.

the modes of melodic minor

We will be using modes on five steps of melodic minor. See [Modes/Modes Of Four Heptatonic Scales/Melodic Minor Modes \(major b3\)](#).

Mode One. You'll need to quickly find the melodic minor scale you intend on using just before the target chord. You should learn to find it multiple ways, mostly related to the modes of melodic minor. The melodic minor scale you will use on your target chord is on the flatted sixth (b6) of your target. This is a half step above the fifth of your target. The flatted sixth of your target is also a major third below the target.

Super Locrian. In relation to [Secondary Dominants](#), the most important melodic minor mode is super Locrian, which is on the fifth of your target. On the bass strings (the largest, 4, 5 and 6), this would be on the same fret of the next larger string in relation to your target or on the next smaller string, two frets higher.

Cadences. In relation to cadences, the most important melodic minor modes are one (discussed above) and four. Mode four is Lydian dominant, which is the same as Mixolydian sharp four, since it has sharp four and flat seven. See [Lydian Dominant And The Flat Five Substitute](#), below.

The bVIIm9(ma7)-bII13#11-I cadence (Abm9-Db13#11-C for a "C" target) mimics the II V I cadence based on the major scale. This is not commonly used, but is very effective. I love it when that happens!

Lydian Dominant And The Flat Five Substitute. A flat five substitute uses a chord on the flatted second (b2) of the target, instead of on the fifth (5). See [Substitution/The Flat Five Substitute](#) and [Flat Five Substitute Chord Progression](#).

Melodic Minor is Major Flat Three

While harmonic minor scale is a dramatized version of Aeolian mode (see [Harmonic Minor Is Mode VI Of Major Sharp Five](#)), melodic minor is more of a normalized minor scale to counter-act the commonly used harmonic minor. In European classical music, melodic minor has a traditional ascending form that is the major scale with a flat three. Its descending form is the same as Aeolian (natural minor) with flat three, flat six and flat seven. In jazz, melodic minor is used as major flat three, ascending or descending.

Think in the Most Relevant Melodic Minor Mode

this will be a challenge in memorization

Stick with one fingering for hours, until you can freely improvise with it. Strengthen that memory with multiple perspectives by using many modes of the fingering. That will make you harmonically more fluent as well.

melodic minor modes, rather than melodic minor itself

In jazz and other styles that use melodic minor improvisationally, melodic minor is typically not used in the key of the melodic minor scale. Instead, modes of melodic minor are used, mostly modes IV, VI and VII of melodic minor.

multiple modes are better

The most fluent and interesting improvisers like Art Tatum, Charlie Parker, Joe Pass, Pat Martino, Chick Corea, Keith Jarrett and George Benson make free-form melody that shows resources from a great many modes. Being able to think in multiple modes allows making more theme and variation relationships by playing with common roots involving substitute chords and their modes.

In melodic minor, at least learn to think in modes IV, VI and VII, which are respectively on bII, IV and V of your target.

you need to know all the modes for cadences with inversions

A descending number series occurs when you look at the alterations of the major scale modes that occur when you alter a tone of the major scale, then look in ascending order of modes (I, II, III, etc.) and which numbered tone is altered. That is shown in the table below for melodic minor.

major scale modes →	major	Dorian	Phrygian	Lydian	Mixolydian	Aeolian	Locrian
mode of melodic minor	major flat three	Dorian flat two	Phrygian flat one	Lydian flat seven (Lydian Dominant)	Mixolydian flat six	Aeolian flat five	Locrian flat four (super Locrian)
alteration of grand parent major	b3	b2	b1	b7	b6	b5	b4
formula	1-2-b3-4-5-6-7	1-b2-b3-4-5-6-b7	b1-b2-b3-4-5-b6-b7	1-2-3-#4-5-6-b7	1-2-3-4-5-b6-b7	1-2-b3-4-b5-b6-b7	1-b2-b3-b4-b5-b6-b7
harmonic use	Im(ma7) IV7 cadence	IIIm7 = IV6	thinking in the key of the target	bII13#11 of the target	V chords of target with b6 of mel. min. bass	secondary root on the third of bII13#11	super-altered V chords

deciding which mode to focus on

You may know one of the modes better. It may be easy for you to think in Mixolydian and sharp the four. This would be on bII of your target.

Or, you may have a blues background and find it easiest to think in a minor key with b5, using Aeolian b5. This would be on IV of your target.

If you are thinking in terms of altered V chords, you may want to think in terms of super Locrian on V of your target, as elaborated below.

the super Locrian basis

In jazz, melodic minor is mainly used to sound a super-altered V chord. I call this chord the *Swiss army seventh chord*. It is a seventh chord with sharp and flat five, sharp and flat nine, written 7b5#5b9#9. Of all the modes of seven-tone scales, only one has the notes of this chord (of course, all modes are unique). That is the mode on the seventh step of melodic minor scale.

Relating Melodic Minor Modal Tone Centers to the Target Root

The melodic minor tone center ("1") is a point of reference from which to build its modes. It is usually not played in the key of the chord which it is targeting.

graphically relating melodic minor 1 and the target root

The melodic minor scale you're using is on the flat sixth of the target. Looking at in from the perspective of the melodic minor tone center (mode I), the target is a major third above it, though it has a flat third. On the bass strings, a major third has a diagonal shape, making one of the shapes below.

graphically relating Lydian dominant and the target root

Mode IV of the melodic minor scale is Lydian dominant (Lydian mode with flat seven). It is to be used on "b2" of the target. This is easy to visualize, since the tone center for melodic minor IV is a half step above the target root. See the diagrams on the table below and note the one-fret relationship between the circled tone center of melodic minor IV and the target root (marked "X").

graphically relating Aeolian flat five and the target root

Mode VI of melodic minor is Aeolian flat five. It should be used on IV of the target. So it will be either a perfect fourth above the target or a perfect fifth below (which is the same note).

graphically relating super Locrian and the target root

Mode VII of melodic minor is super Locrian. It should be used on V of the target. So it will be either a perfect fifth above the target or a perfect fourth below (which is the same note).

Aural Melodic Minor Improv

IV Aeolian b5, V Super Locrian and bII13#11

use these three steps:

1. improvise with bluesy IV Aeolian flat five
2. improvise with super Locrian, resolving to the target triad
3. voice-lead with bII13#11 to the target triad

See [melodic minor scale fingerings 6, 7 and 3](#).

For the I chord (C7) in a blues in C, learn to use Ab melodic minor (b6 of C) during the Db7 chord in Db7 to C7.

For the IV chord (F7) in a blues in C, learn to use Db melodic minor (b6 of F) during the Gb7 chord in Gb7 to F7. Then use Db melodic minor on Dbm9(ma7) Gb7 and F Mixolydian (same notes as C Dorian) on the F7.

1. improvise with bluesy IV Aeolian flat five, resolving to the target triad

Before actually using the IV Aeolian b5, establish a blues-based style.

If in a minor key, Begin your improv with minor pentatonic and elaborate to the minor mode, Aeolian or Dorian, as appropriate.

If in a major key, also use minor pentatonic. Slur flat three to natural three, use occasional flatted thirds as a blue note. In some cases, use natural three instead of flat three. If you are in major mode and have a natural seven in the key scale, use some blue note flat sevens.

If in a major key, combine minor pentatonic and major pentatonic. This combination is the basis of B.B. King's style, as adopted by Eric Clapton and countless others. Use [Minor Pentatonic Blues Rock Cells](#) as a resource. They are written in G minor, so you'll need to move them up a whole step (two frets toward the body of the guitar). Use [Major Pentatonic Swing Cells](#) as a resource. They are written in G major, so you'll need to move them up two and a half steps (five frets toward the body of the guitar) or down three and a half steps (seven frets toward the head of the guitar).

IV Aeolian flat five (on the four of your target) can be very effective in sharing memories of bluesy minor melodies with a flat five with your listeners (on IV of the target). These are likely familiar to you and your listeners. Using the melodic minor with its super Locrian mode on the fifth of your target can

also be thought of as Aeolian flat five on the fourth of the target. If your target chord is C7, F Aeolian flat five on the fourth of C has the same notes as G super Locrian on the fifth of C.

Here are minor 7/11b5 pentatonic (minor pentatonic with a flat five) subsets of Aeolian flat five. Locate the circled tone center on IV of your target.

2. improvise with V super Locrian, resolving to the target triad

Do this aurally and intuitively at first, before engaging your left brain into much thought in numbers and letters. Think of melodic minor first in terms of the super Locrian tone center on its seventh step. This is the fifth of your target. In the super Locrian scale on V of your target, locate the half-whole-half and five-note whole step parts and use them to bring out the character of each.

Learn versions of altered seventh chords, including 7#5, 7b5, 7#9, 7b9, 7#5#9, 7b5#9, 7b5b9 and use parts of them rooted on the super Locrian tone center in your melody. With the “flat all” formula of super Locrian (1-b2-b3-b4-b5-b6-b7), the flat four proxies as (acts as) a natural three. The flat two and flat three function as flat nine and sharp nine (b3 = #2 = #9). The flat sharp six proxies as sharp five. Along with the flat four acting as a natural three, the scale has the tones 1, 3, b5 and 7 to make a seventh flat five chord. With the other tones, it has all the tones of 7b5#5b9#9.

3. voice lead with bII13#11 to the target triad

Another melodic minor mode makes a colorful chord on the flat two of your target. For a C7 target, this would be bII (Db) Lydian flat seven, which makes the chord Db13#11. The root triad part of II(Db)13#11 (its root, third and fifth) is very important in [voice leading](#) to the target chord. Each note progresses down to its target chord tone.

Voice lead arpeggio tones of bII13#11 (Db13#11) to the root, third and fifth of your target. If the target chord is major, each tone of the bII triad progresses down a half step (one fret) and the third can optionally resolve up a whole step (two frets). If the target chord is minor, the only change is the third [voice leading](#) down a whole step.

flat five substitute

In addition to providing the Swiss army seventh chord, melodic minor allows a set of synonym chords. Most of the Swiss army seventh chords based on $V7b5\#5b9\#9$ ($G7b5\#5b9\#9$) have alternate names as parts of $bII13\#11$ ($Db13\#11$). Basically, use the super Locrian V type ($G7b5\#5b9\#9$) for scalar ideas and chunks of chords (see “use Swiss army seventh chord fingerings below). Use the bII type ($Db13\#11$) for arpeggio ideas. See [Flat Five Substitute Chord Progression](#).

if the setup chord is bII , think Lydian flat seven first

If the chord in the accompaniment actually is bII of the target, such as $Db7$ before $C7$, think Lydian flat seven (Db Lydian $b7$) first. That reverses the order of priority shown earlier:

- ✦ Lydian flat seven on the flat two of your target chord
- ✦ Aeolian on the fourth of your target
- ✦ super Locrian on the fifth of your target

melodic minor scale fingerings 6, 7 and 3

The target chord below is Cma7, C7 or Cm7. Also see [harmonic minor scale fingerings 6, 7 and 3](#) based on the same parent major scale fingerings.

<p>Ab major scale fingering 6 I</p>	<p>Ab major flat three fingering 6 I</p>	<p>F Aeolian b5 I</p>	<p>Db9 arpeggio I</p>	<p>target chord Cma9 II</p>	<p>target chord C9 II</p>	<p>target chord Cm9 I</p>
<p>Ab major scale fingering 7 III</p>	<p>Ab major flat three fingering 7 III</p>	<p>F Aeolian b5 II</p>	<p>Db9 arpeggio II</p>	<p>target chord Cma9 III</p>	<p>target chord C7 III</p>	<p>target chord Cm7 III</p>
<p>Ab major scale fingering 7 VIII</p>	<p>Ab major flat three fingering 7 VII</p>	<p>F Aeolian b5 VI</p>	<p>Db9 arpeggio VII</p>	<p>target chord Cma9 VIII</p>	<p>target chord C7 CIII</p>	<p>target chord Cm7 VIII</p>

Voice Leading the Tones of Melodic Minor IV13#11

	<u>voice lead</u>	<u>interval</u>
1	down	half step
3	up or down	down half, up whole
5	down	half step
b7	up	up half
2	down	minor third (or half)
#4	retain	(or to 5 then down half)
6	retain	(or to b7 then up half)

It's most important to voice lead the root, third and fifth of the bII7 chord (Db7 before tonic C) down a half step, with an option of the third resolving up a whole step.

Think bII bVI In The Key Of The Target Chord

In the key of the target chord, think of the melodic minor Im9(ma7) IV9 cadence as bIIIm9(ma7) bVI9. Melodic minor cadences are shown below in every key.

target chord key ↓	melodic minor key	mel. minor I bII of target	mel. minor I bVI of target
A	A	Bbm9(ma7)	Fb(E)13#11
Bb	Bb	Cbm9(ma7)	Gb13#11
B	B	Cm9(ma7)	G13#11
C	C	Dbm9(ma7)	Ab13#11
C#	C#	Dm9(ma7)	A13#11
Db	Db	Ebb(D)m9(ma7)	Bbb(A)13#11
D	D	Ebm9(ma7)	Bb13#11
Eb	Eb	Fb(E)m9(ma7)	Cb 13#11
E	E	Fm9(ma7)	C 13#11
F	F	Gbm9(ma7)	Db 13#11
F#	F#	Gm9(ma7)	D 13#11
Gb	Gb	Abb(G)m9(ma7)	Ebb(D) 13#11
G	G	Abm9(ma7)	Eb 13#11
Ab	Ab	Dbm9(ma7)	Eb 13#11

Voice Leading bII Tones to I

melodic minor arpeggios with voice leading

Each tone of the bII resolves down one fret. Optionally, the third of the bII chord ("F" in the Db7) can resolve up a third to the fifth of the tonic C7. Extensively practice resolving from each tone of the bII chord to a tone of the I chord. Memorize a library of phrases that employ resolution from the root, third and fifth of the bII (Db7) to the root, third and fifth of the I tonic (C7). Similarly practice resolving in the key of IV (F) with Gb7 to F7.

jazz blues In C

Many of the examples in this section use Jazz Blues in C. The progression is shown below. You should also see [Modes/Modes On Jazz Blues](#) and especially [Jazz Blues Key Scales](#).

C7 (I7)	F7 (I7)	C7 (I7)	C7 (I7)
F7 (IV7)	F#dim7 (IV7)	C7 (I7)	A7 (VI7)
Dm7 (IIIm7)	G7 (V7)	C7 (I7) A7 (VI7)	Dm7 (IIIm7) G7 (V7)

melodic minor "I IV" cadences

C9 is the target chord, using a Im(ma7) IV9 (Abm [ma7] Db9) cadence in Ab melodic minor. Db Lydian dominant is mode IV of Ab melodic minor, as you can see in the table below.

modes of Ab melodic minor scale used for Db Lydian dominant

Ab melodic minor	Bb Dorian flat two	C Phrygian flat one (Cb)	Db Lydian flat seven (Lydian dominant)	Eb Mixolydian flat six	F Aeolian flat five	G Locrian flat four (super locrian)
b3	b2	b1	b7	b6	b5	b4
1-2-b3-4-5-6-7	1-b2-b3-4-5-6-b7	b1-b2-b3-4-5-b6-b7	1-2-3-#4-5-6-b7	1-2-3-4-5-b6-b7	1-2-b3-4-b5-b6-b7	1-b2-b3-b4-b5-b6-b7

A Theory Summary for Every Melodic Minor Mode

The target key scale chord doesn't have to be I minor, but can be I dominant type (major with b7) or I major type (major with natural seven).

theory summary: melodic minor contains a super-altered dominant

Im(ma7) begins the I IV melodic minor cadence (Abm[ma7] - Db7 to C target), which can elaborate on the bII chord before the target I chord. I melodic minor is chord scale that elaborates on the Im(ma7) that occurs as a secondary root on the fifth of IV13#11.

The melodic minor scale was chosen for jazz improv because of its super Locrian mode. We needed a super-altered dominant chord with flat five, sharp five flat nine and sharp nine, yet still with a major third and a flattened seventh. That calls for seven specific notes. Only one mode has those: melodic minor mode seven, commonly called super Locrian.

Thinking in melodic minor is based on using a super-altered V chord in authentic minor V - I cadence with V7b5#5b9#9 (G7b5#5b9#9), but from the perspective of the target I chord (Am). See theory summary: melodic minor VII (super Locrian).

Remember, the target key scale chord doesn't have to be I minor, but can be I7 type (major with b7) or Ima7 (major with natural seven).

theory summary: Dorian flat two

The [flat five substitute](#) for the key scale V - I authentic cadence is bII - I. Use the synonym bII6 = bVIIIm7 (Db6 = Bbm7) as a basic for use of key scale bVII Dorian flat two. In terms of the bVI melodic minor parent scale, this is II Dorian flat two.

Especially resolve the key scale bII triad to the I triad, where the bII triad is the root, third and fifth of bVIIIm7. In addition to resolving those tones, generally emulate key scale bVIIIm7 to VIm7, which is a synonym of I6. Key scale IVm7b5 - bVIIIm7-VIm7 (= I6) is a cool cadence.

Use your library of Dorian licks and flat the two. For jazz blues in C (or most any jazz tune in C), use Bb Dorian b2 emulate a Db13#11 chord for up to two seconds before a C chord.

theory summary: Phrygian flat one

This is a useful theme and variation perspective. Key scale bVI melodic minor emulates the key scale V7b5#5b9#9 (Swiss army, super-altered) and its [flat five substitute](#), the key scale bII13#11. Key scale I Phrygian flat one (C Phrygian flat one, on Cb) is a mode of key scale bVI melodic minor (Ab melodic minor). It can be used to conceive theme and variation that ambiguously suggests the Cm or Cm7 of C Phrygian, but with a flat one (Cb) while emphasizing tones of key scale V7b5#5b9#9

or bII13#11. The theme can then be restated when you follow onto the tonic I chord and change the mode of the theme to the appropriate one for the tonic chord (I Mixolydian for a I7 chord, for example).

theory summary: Lydian flat seven (Lydian dominant)

This is the classic [flat five substitute](#) mode. Subsets of key scale IV13#11 (like IV9) make numerous synonyms of subsets of VII7b5#5b9#9 (like VII7b5#5b9 no root). The IV13#11 is used in key as bII13#11 and the VII7b5#5b9#9 as V7b5#5b9#9. These are based on the synonym IV7b5 = VII7b5.

The melodic minor Im9(ma7) - IV13#11 (or subset such as IV9) is very effective with this mode. See [Fingering Melodic Minor Cadences](#).

theory summary: Mixolydian flat six

The root, third and flat six (b13 or #5) of the key scale bIII chord is an augmented triad and is a synonym for key scale V augmented. Make use of that as a synonym for an authentic V augmented - I cadence.

Tone five of melodic minor is a major third below the root of the super-altered (Swiss army) family of chords rooted on the seventh step of melodic minor (see [melodic minor VII](#), below). So, it can function as a root in the same manner that Am (A-C-E) over "F" is Fma7. This produces hypothetical names like G7#9/Eb, where Eb is the fifth of Ab melodic minor and G7#9 is one of the altered seventh chords on mode VII of melodic minor.

theory summary: Aeolian flat five on the third of bII9

Theory summaries allow you to tap whole genres of melody and repurpose them in a manner very understandable to the listener. In this case, you can play your minor key (Aeolian) blues ideas with a flat five (Aeolian flat five) and be using the notes of melodic minor without having to think melodic minor at first.

F can be a [secondary root](#) on the third of Db9, using Fm7b5 as a partial Db9. Db9 without its root has the same notes as Fm7b5. To then elaborate on Fm7b5, use F Aeolian flat five, mode six of Ab melodic minor. The result is the same notes as Ab melodic minor or Db Lydian dominant but stylized as dark minor blues. You can see the examples of Aeolian flat five for each chord of a C jazz blues on [the table "melodic minor modes used for bII Lydian dominant of each target"](#).

Key scale IVm7b5 - bVIIIm7 - VIIm7 (= I6) is a cool cadence. See [theory summary: Dorian flat two](#).

theory summary: melodic minor VII (super Locrian)

The fingering for super Locrian is half-whole-half steps, followed by five notes a whole step apart. The formula for super Locrian is 1-b2-b3-b4-b5-b6-b7. Thinking of flat four as natural three, there is a note a half step above the tone center ("b2" is a half step above "1") and a note a half step below three (b3 is a half step below b4, which is 3). From three ("b4") up to one, it is five notes in whole steps: 3, b5, b6,

b7 and 1. On a single string, it looks like this (from the players perspective, looking down at their own guitar):

I call the super-altered key scale V chord ($G7b5\#5b9\#9$) created by super Locrian the *Swiss army seventh chord*. In your improv with this scale, you can think of chord fingerings such as $G7\#5\#9$ or $G7b5b9$ as a graphic template for melody. Elaborate on notes in the chord in single note melody.

By thinking in super Locrian, you'll suggest the super-altered V chords. Thinking of A^b melodic minor in terms of its mode VII, G super Locrian before a C7 chord suggests part or all of the super-altered (Swiss army) $G7b5\#5b9\#9$ chord.

A similar mode occurs on the third step of major flat six scale: Phrygian flat four. Because of its similarity to super Locrian, I call it "super Phrygian". It has all the same notes as super locrian, but has a perfect fifth rather than a flatted fifth. So, it has the notes to make a flat nine and sharp nine but only a sharpened fifth, not a flatted fifth.

More Melodic Minor Theory Summaries

theory summary: half-whole-half

The super Locrian scale starts with the interval pattern half step, whole step, half step, which makes one of the most popular four-note [melodic cells](#) in jazz improv. This half-whole-half pattern is steps seven, one two flat three of harmonic minor, melodic minor and Phrygian flat four (super Phrygian, mode three of major flat six scale).

Half-whole-half also occurs with the hybrid Aeolian and harmonic minor (1-2-b3-4-5-b6-b7-7) with tones 7-b7-b6-5. Other instances of half-whole-half occur at the transition from one scale to another, such as descending 5- $\#4$ -3 (A^b -G-F) of D^b Lydian dominant (Lydian flat seven, mode four of melodic minor) to the third of C ("E").

theory summary: **voice leading with key scales**

For both comping and soloing, thinking versions all of the scales named after the tone center (“C” in C jazz blues) can make it much easier to see relationships for theme and variation and for **voice leading**. It is quite a chore to learn all of the modes as key scales (all in “C”, for example), but worth the effort.

On the table “**melodic minor modes used for bII Lydian dominant of each target**”, you can find a mode for every melodic minor scale that names it with the letter “C”, for the key of “C”.

Here is a key scale summary of the **melodic minor mode table**:

target tonic chord →	C7 tonic	F7 temp. tonic	G7 temp. tonic	A7 temp. tonic	Dm7 temp. tonic
key scale used during (bVIm) bII cadence (flat five substitute)	C Phrygian flat one (Cb)	C Locrian flat four (super locrian)	C Phrygian flat one (Cb)	C Mixolydian flat six	C Dorian flat two
key scale formula	b1-b2-b3-4-5-b6-b7	1-b2-b3-b4-b5-b6-b7	b1-b2-b3-4-5-b6-b7	1,-2-3-4-5-b6-b7	1-b2-b3-4-5-6-b7
authentic V of tonic or temporary tonic	G7b5#5b9#9	C7b5#5b9#9	D7b5#5b9#9	E7b5#5b9#9	A7b5#5b9#9
parent melodic minor	Ab melodic minor	Db melodic minor	Eb melodic minor	F melodic minor	Bb melodic minor

theory summary: **pedal point triads**

For both comping and soloing (as usual), you can create a wealth of harmonic and melodic structures based on scale-tone triads. If you’re more excited about single-note soloing than comping (which is typical) be aware that the triad structures can be thought of a template to build single note melodic lines.

In Pedal Point Triads/Modal Triad Improv, you can learn to build chords and melodies with triads. It also directs you to [Scale-Tone Arpeggios And Pentatonics/Building Triad Arcs](#), where you can go through a set of the seven major scale in-position fingerings to get an overview of the full-fretboard triad structure.

Melodic Minor Cadences to Each Chord in Jazz Blues

Using a Im(ma7) IV9 cadence in the appropriate key, *every* chord in a jazz blues can be approached with a melodic minor cadence. I'm using the term "grandparent" major here (upper left of the table) to refer to the major scale which was altered to produce the major sharp five scale (including the harmonic minor mode) on its sixth step.

melodic minor modes used for bII Lydian dominant of each tonic or temporary tonic

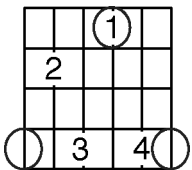

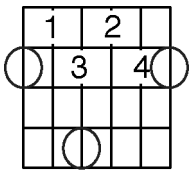

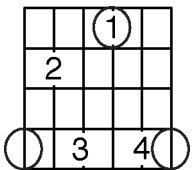

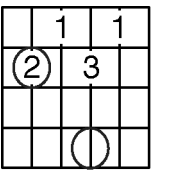

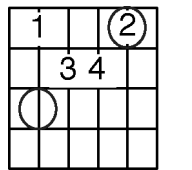

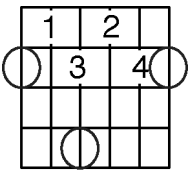

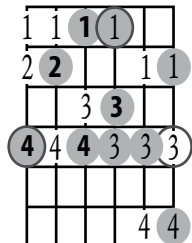

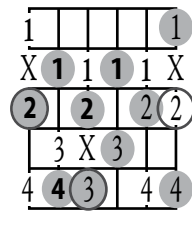

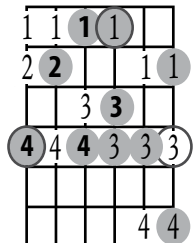

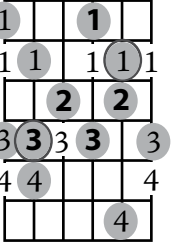

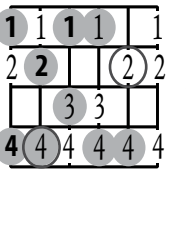

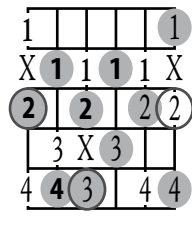

altered tone of grandparent major scale →		b3	b2	b1	b7	b6	b5	b4
target tonic chord ↓	mode formula →	1-2-b3-4-5-6-7	1-b2-b3-4-5-6-b7	b1-b2-b3-4-5-b6-b7	1-2-3-#4-5-6-b7	1-2-3-4-5-b6-b7	1-2-b3-4-b5-b6-b7	1-b2-b3-b4-b5-b6-b7
	key scale ↓	mode I of melodic minor	mode II of melodic minor	mode bIII of melodic minor	mode IV of melodic minor	mode V of melodic minor	mode VI of melodic minor	mode VII of melodic minor
C7 (I7) or Cm as secondary root of F9	Ab melodic minor	Ab melodic minor	Bb Dorian flat two	C Phrygian flat one (Cb)	Db Lydian flat seven (Lydian dominant)	Eb Mixolydian flat six	F Aeolian flat five	G Locrian flat four (super locrian)
F7 (IV7)	Db melodic minor	Db melodic minor	Eb Dorian flat two	F Phrygian flat one (Fb)	Gb Lydian flat seven (Lydian dominant)	Ab Mixolydian flat six	Bb Aeolian flat five	C Locrian flat four (super locrian)
G7 (V7)	Eb melodic minor	Eb melodic minor	F Dorian flat two	G Phrygian flat one (Gb)	Ab Lydian flat seven (Lydian dominant)	Bb Mixolydian flat six	C Aeolian flat five	D Locrian flat four (super locrian)
Dm7 (IIIm7)	Bb melodic minor	Bb melodic minor	C Dorian flat two	D Phrygian flat one (Db)	Eb Lydian flat seven (Lydian dominant)	F Mixolydian flat six	G Aeolian flat five	A Locrian flat four (super locrian)
A7 (VI7)	F melodic minor	F melodic minor	G Dorian flat two	A Phrygian flat one (Ab)	Bb Lydian flat seven (Lydian dominant)	C Mixolydian flat six	D Aeolian flat five	E Locrian flat four (super locrian)

The more dis-related the scales are in a cadence and its target (tonic or temporary tonic), the more time you need to establish the cadence melodically and the simpler the resolution needs to be. When such cadences happen in a few seconds, it is usually better to use a two-chord version of the cadence, such as bII9 to I, rather than the three-chord version bVIm(ma7) bII9 to I.

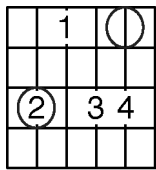

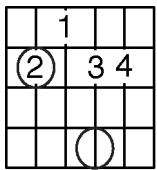

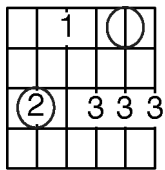

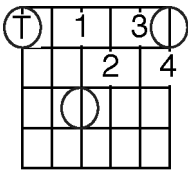

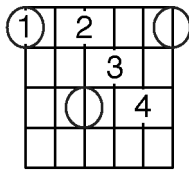

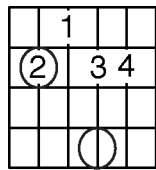

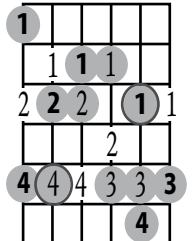

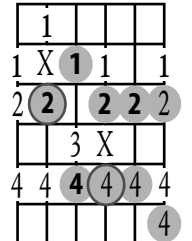

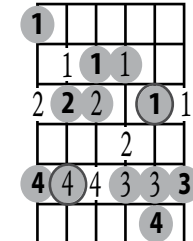

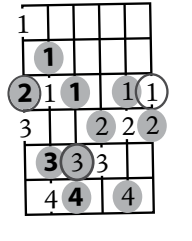

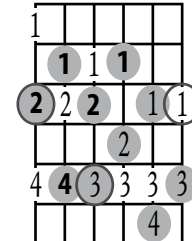

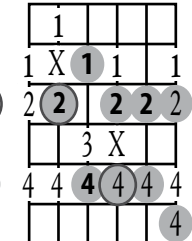

To make it simpler, stay closer to the triad tones of each chord and use common tones. For example, in playing a melodic minor cadence during the later part of bar nine in a jazz blues in C with Ab9 to G7b9, you could use the secondary root of the Ab9 and play Cm7b5 and think C Aeolian flat five as its chord scale. This will get you playing dark C minor flat five blues ideas and strike a relationship with the key. To further strengthen it, be sure to include the note “D”, so the chord also suggests the synonym of Ab13#11, D7b5#5b9#9 (the “Swiss army”, super-altered mode VII of its parent Eb melodic minor scale).

("4" to "6" is a major third, so the tone center for the second scale is down a fret from a perfect fourth)						
4	bII (Db) melodic minor before IV (F)	I or XIII	VIII	II or XIV	XI	VI
6	VI (A) harmonic minor before VI (or Am)	XII	VII	I or XIII	X	V

Comparing Combined Cadences to Chromatic Drift

Chromatic drift is the repetition of a melodic cell (short phrase) up or down chromatically (in half steps). It is then resolved to the chord used by the first cell. Combined cadences are more often chromatic than not and can be very similar to chromatic drift. Combined cadences don't usually return to the original chord, which is the distinction.

SUBSETS ON THE FIFTH

Subsets Triads on the Fifth of the Dominant

Each of the ninth chords described below V9, V7b9 or bII9 are preceded in three chord cadences with a chord whose triad is the same notes as the fifth, seventh and ninth of the ninth chord. With major II V or harmonic minor II V cadences, these make up the tones of a II or II dim triad which each resolve down a scale tone to a triad tone of the tonic chord. With bVIIm bII cadences, the tones of the bVIIm triad have more specific and complicated resolutions:

the fifth of the bII9 (root of bVIIm) resolves down a half step to the fifth of the I tonic

the b7 of the bII9 (b3 of bVIIm) resolves up a half step to the root of the I tonic

the ninth of the bII9 (fifth of bVIIm) resolves down a minor third to the root of the tonic

IIIm is a Subset of V9

Any II V cadence that uses exclusively tones of a single scale shares tones. The root, third and fifth of a IIIm chord are 2, 4, 6 of the parent and are the top tones of the V9 chord, which is 5, 7, 2, 4, 6.

II dim is a Subset of V7b9

In a minor IIIm7b5 V7b9 cadence, the II diminished triad part of the IIIm7b5 (Dm7b5) is 2, 4, b6 of the harmonic minor tonic scale (C harmonic minor scale) and are the top tones of the V7b9 chord, which is 5, 7, 2, 4 b6.

bVIIm is a Subset of bII9

In a [flat five substitute](#) cadence, the bVIIm triad part of the bVIIm9(ma7) (Abm9[ma7]) is 1, b3 5 of the bVI melodic minor scale (Ab harmonic minor for Abm to Db7 to a C tonic) and are the top tones of the bII7b9 chord, which is 4, 6, 1, b3, 5 of the bVI melodic minor.

bVIm(ma7) is a Subset of bII13#11

When thinking the bVIm bII (Abm Db) cadence (Im IV of bVI parent melodic minor), there are shared tones in the arpeggios. bVIm(ma7) tones are 1, b3, 5, 7, 2 of the parent bVI melodic minor scale. IV13#11, which is used for [flat five substitutes](#) (bII of tonic) is 4, 6, 1, b3, 5, 7, 2 of the parent bVI melodic minor scale. “4, 6, 1, b3, 5, 7, 2” are respectively the root, third, fifth, flatted seventh, ninth, sharp eleventh and thirteenth of the 13#11. Notice that the fifth through the thirteen of the IV13#11 are “1, b3, 5, 7, 2” of the parent bVI melodic minor scale, the same thing as the Im(m9).

So, when you are using the Im(ma7) or Abm9(ma7) arpeggio, be aware that is is the top of the IV13#11 and can resolve to the tonic chord, especially if you descend the arpeggio to the lower tones of the IV13#11.

REFERENCE MAJOR SCALE FINGERINGS

The Purpose of Memorizing These Major Scale Fingerings

Melodies and chord voicings can be learned by number, in relation to major scales. Chord voicings are the choices of which notes are represented in a chord and in which octave each note occurs. To fluently find melodies by number and to fluently build chord voicings, you need to know all seven in-position major scale fingerings.

Seven In-Position Major Scale Fingerings

Major scale fingerings are numbered in these studies according to the number of lowest note fingered with the index finger on the sixth string. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

In-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall. Three-note-per-string major scale fingerings combine in-position fingerings and are not initially needed in these studies.

Strict Vertical Position

This concept is primarily used for single-note playing of melodies, scales and arpeggios; not for chords. The rules of strict vertical position specify which finger would be used to fret each of thirty-six note locations on the fretboard through a range of six frets on all six strings.

fifth position

1	1	1	1	1	1
1	1	1	1	1	1
2	2	2	2	2	2
3	3	3	3	3	3
4	4	4	4	4	4
4	4	4	4	4	4

← fifth fret

Position is numbered after the fret at which your index finger is placed. In that position, the other three fingers are assigned one of the next three frets in-a-row toward the body of the guitar. In other words, each of the four fingers are assigned to one of four consecutive frets.

The examples below show the first string. The position numbers would be the same, regardless of which string the fingers were placed upon.

fifth position

			1
			2
			3
			4
			4

← fifth fret

seventh position

VI

			1
			1
			2
			3
			4
			4

← sixth fret

head reach and body reach

A head reach is a reach out of position toward the head of the guitar with the index finger, shown above where the index finger is used twice on the same string. A body reach is a reach out of position toward the body of the guitar with the little finger, shown above where the little finger is used twice on the same string.

side step

A *side step* is a temporary change of position before returning to the original position. It usually involves notes in the temporary position on only one or two strings. In fingering six of C major scale below, most of the scale is fingered in fifth position (with the index finger at the fifth fret), but there is a side step where the notes on the third string are fingered in fourth position. In fingering two of C major scale below, most of the scale is fingered in tenth position (with the index finger at the tenth fret), but there is a side step where the notes on the fourth and third string are fingered in ninth tenth position.

PLAYING MELODY BY NUMBER

Melody is usually in a key or may change keys during the course of the melody. Each portion of the melody in a particular key (often the entire melody) can be expressed in numbers of a major scale named after the key of the melody.

Reference Major Scales for Note Numbers

The tones of any melody, scale, arpeggio, chord or bassline can be expressed in numbers. The universal reference is the major scale. The major scale needs to be conceived in the key of the melody, scale bassline or on the root of the chord or arpeggio. By using sharped and flatted versions of the major scale, any chromatic note can be defined with a number. A “C” note in a melody or in a chord in the key of “C” would be numbered “1”. A “D” note would be “2”. An “Eb” would be flat three.

Chord Formulas

The number expression for a chord can be called its *formula*. The formula for a dominant seventh chord such as C7 is 1-3-5-b7. You can learn more about chord formulas in “[Chord Naming Conventions](#)” and “[All Scale-Tone Chords](#)” and “[Chord Archetypes](#)”.

all tones by number in all keys, including hypothetical keys

Key	1	b2	2	#2/b3	3	4	#4/b5	5	#5/b6	6	b7	7

numbering chord tones may involve double sharps or double flats

Numbering the tones in a chord or arpeggio may involve uncommon major scales with double sharps and double flats. For example, the flatted ninth in Ab7b9 is B double flat. The formula for a seven flat nine chord is 1-3-5-b7-b9. “b9” is the same note as “b2”. In the table above, you can see that the “b2” in the key of Ab is “Bbb” (B double flat).

Reference major scales include redundant major scales not used in performance, such as “D#” (D sharp) major, where “Eb” is used instead, with the same pitches. “D#” may be a chord root in the key of B major, where you would think in the hypothetical key of D# to number tones in the D# chord. D sharp major would have five notes with a sharp name and two with a double sharp. See the table above.

THE CHORD SERIAL NUMBER SYSTEM

chord name	Cm	VIII	C7	VIII	Cm7	VIII
chord fingering						
serial number	151b351	10b7350	10b7b350			

chord serial numbers

In the chord serial number system, the number 157300 represents chord tones in order from the sixth (largest) to first (smallest) string. Each number represents a major scale tone in the key of the chord root. The number “0” (zero) indicates that a string is not played. If a number is flatted or sharped, it indicates an altered major scale tone in the key of the chord root. The large circles on chord diagrams in this course show the location of the chord root (note after which the chord is named, such as the Bb root of a Bbma7 chord). When the large circle is empty, it shows the location of a chord root that is not played in the chord, as a point of reference.

The numbers 151b351 would represent the tones one, five, one, flat three, five, one, from the sixth string (largest) to the first string. In the key of “C”, these notes would be C-G-C-Eb-G-C. See the first diagram above.

The numbers 10b7350 would represent the tones one on the sixth string, no note on the fifth string, flat seven on the fourth string, three on the third string, five on the second string and no note on the first string. In the key of “C”, these notes would be C-(no note)-Bb-E-G-(no note). See the middle diagram above.

The serial number system applies to all fretted chords only, not open string chords. “1” represents the root, “3” the third, “5” the fifth and “7” the seventh of the chord. Zeros (“0”) represent a string that is not to be sounded.

TOP-VOICED CHORDS BY SERIAL NUMBER IN CHORD MELODY

What is Top-Voice Leading?

Chords with similar numbers of notes can be thought of as voices, as in a vocal or instrumental ensemble. A melodic line made from the series of the top note from each chord makes the soprano part or the “top voice” part. A melodic line made from the series of the bottom note from each chord makes the bass part. In four-voice harmony, the next to bottom note is the alto and the next to the top notes is the tenor.

The most prominent voice is usually the soprano, or top voice. Learn to voice chords so they make a melody with their series of top voice notes, sometimes doubling the main melody of the song or creating a counter melody.

UNTITLED

Body.....

The Emotive Curve and Sentiments

- **The Emotive Curve**
- **Sentiments (Rasas) in Indian Classical Music**

Immediately before a live performance or recording, performers should conceive how their music will sound and what moods it will create. Developing performers typically have in mind what they want out of a performance but during the performance, they are affected emotionally by the audience or band members and lose track of how they wanted to perform the music. There may be some confused communication with a band member or a comment or look from someone in the audience that throws you off and distracts you. You have memorized your scales, chord progressions and licks so you can recall and control them, why not do the same with the elements of expression when under pressure?

The emotional expression during a piece of music can be expressed with a diagram. The timeline would run from left to right. High intensity to low intensity would be indicated top to bottom. There are typically two or more peaks, with the greatest one near or at the end as a climax.

Melody

Stage the melody with the appropriate accompaniment. The overall emotive curve combines any or all of the elements below.

Pitch: slurs, dynamics, rhythm, timbre, combinations.

Dynamics: fade, skip in volume level.

Rhythmic intensity: rhythmic level, syncopation, phrasing, polyrhythm.

Harmonic Complexity. More complex chord progressions, particularly those with dissonance or chromaticism increase the intensity.

Timbre. Anything that draws the listeners attention increases the intensity. The location of pick up and down string affects its tone, with brighter tone toward the bridge. Rotation of the pick on its axis affects the clarity of its tone, with the clearest tone where the pick is parallel to the string and the roughest tone when the picks axis is angled at a 45° angle to the string. Choice of pick. Plucking versus picking. Muting. Guitar and amp tone and effects such as distortion and wah wah.

Melodic Expression Contrasted By The Accompaniment. Melodic content strikingly different in nature from the accompaniment can increase the intensity.

Expressive Curve Example In A Lesson. We copied the overall expressive curve from the intro solo to Metallica's Sanitarium by sketching it. Used the first half of it to play over Center (C to Em 4X) in pitch curve context. Curve (first half) was generally four segments: mid-range plateau, rise to slightly higher plateau, break briefly, descend to low range. Sentiments used were:

- (1) Astonishment, where the student suggested "tinkling octaves" in the accompaniment.
- (2) Disgust (angry), where the student suggested hard feel and accents with some dissonance. I used syncopation in the accents to support the anger.

SENTIMENTS (RASAS) IN INDIAN CLASSICAL MUSIC

Introduction to Chord Progression

- **Basic Definitions**
- **Scale-Tone Chord Construction**
- **Chord Construction by Formula**
- **Major Scale-Tone Chord Progression**
- **Parent Scale, Chord Scale and Key Scale**
- **Modulation and Voice Leading**
- **Recognizing Chord Progressions**

BASIC DEFINITIONS

Chord

Two scale tones played simultaneously constitute an interval. Three or more scale tones played simultaneously constitute a chord. An interval (two different notes played simultaneously) can be considered a chord, but the more common definition of a chord specifies a minimum of three different notes played simultaneously.

Chord Root

A chord root is the note after which a chord is named. “A” is the root of an A7 chord. “D” is the root of a Dm7 chord. “Eb” is the root of an Eb7 chord. The root is the main note of a chord. Enlarged or circled notes on diagrams indicate chord roots.

A chord root is the lowest bass note you can imagine in a chord. In the chord below, the lowest pitch that sounds is not the root of the chord. The bass note (on the fourth string) is “E”, but the root is “C”.

The version of the “C” chord below includes the root in the bass. The root is a “C” note, after which the chord is named.

Tonic Chord

The tonic chord (or “main chord”) is the chord you would expect the piece of music to end on. It is the chord which sounds most resolved in a piece of music. A tonic chord is used to give the most final sound at the end of a piece.

I said “you would expect” the piece of music to end on the tonic chord, because although the listener expects a song to end on the tonic chord, it doesn’t have to. A song can end with a deceptive cadence (deceptive chord sequence) where the final chord is not the tonic chord. This type of ending is intended to “trick” the listener. Although a deceptive cadence does not produce as strong a feeling of resolution, it still can be stimulating. Likewise, songs often begin on the tonic chord, but they don’t have to.

Many recorded pieces of music have a “fade-out” ending, where no distinct ending chord is played. I generally don’t like fade-out endings. I much prefer hearing the ending the band or artist would play in a live performance.

compositional techniques of establishing the tonic chord:

- ✦ Use long duration or frequent occurrence of the main chord.
- ✦ Use the root of the main chord as the continual bass note for a series of chords.
- ✦ Progressions are typically built with groups of two or four bars. A tonic chord would typically be the first chord after a two or four bar unit.
- ✦ Use a main chord which has a strong consonance. Example “a” below is the strongest consonance and example “c” has the weakest consonance.
 - a. The main chord usually has a strong tonality (is easy to establish as the main chord) in major, Dorian, Mixolydian or Aeolian mode (when major, Dorian, Mixolydian or Aeolian scales are used).
 - b. The main chord has a passive tonality (somewhat difficult to establish as a main chord) in Phrygian or Lydian mode (when Phrygian or Lydian scales are used).
 - c. The main chord has a weak tonality (quite difficult to establish as the main chord) in Locrian mode (when Locrian scale is used).
- ✦ Use the root of the main chord in a low range of pitch.

Tone Center

The tone center of a piece of music is the root of the tonic chord (the chord you expect the piece to end on). If the tonic chord is Cm7, the tone center is “C.” If the tonic chord is Ebm, the tone center is “Eb.” The roman numeral “III” on the upper right of each diagram indicates that the top fret is the third fret.

Whenever scales are shown on diagrams in this book, the tone centers are indicated by enlarged, circled, or “squared” notes:

Key

A song is said to be in a key named after the tone center. If the tone center is “A”, the song is said to be in the key of “A”. The key may be further qualified by the scale or mode type, such as “A” major, “A” minor or “A” Mixolydian.

The term “minor” is often used loosely in key names where the song may be in any mode which has a minor chord built on the tone center (e.g., Aeolian or harmonic minor). Likewise, the term major is sometimes used in reference to any mode which has a major chord built on the tone center (e.g., Mixolydian or Phrygian major).

SCALE-TONE CHORD CONSTRUCTION

In the scale-tone method of chord construction, each tone of a scale can be the root of another chord. The typical construction is with every-other tone of the scale. Scale-tone chords are most often conceived on the major scale, but other seven tone scales can be used as well.

Chords are commonly constructed with an every-other-note pattern on the major scale called thirds. In numbers, this is 1-3-5-7-2-4-6-1-3-5, etc. In letters it is F-A-C-E-G-B-D-F-A-C, etc. (notice that it includes the F-A-C-E- and Every Good Boy Does Fine sequences typically used to memorize the every-other-note patterns of lines and spaces on the staff).

Memorizing Major Scale Note Names

Since chords are constructed from major scales (or from altered major scales), you need to know the names of the notes in all major scales. [Key signatures](#) can help you memorize these note names. In written form, a key signature is written immediately after the clef in a piece of music to indicate which notes (if any) are sharped or flatted (not both) in the major scale on which the piece is based.

Major Scale-Tone Triads

Three note chords are called triads. They can be built on each tone of a major scale, using the every-other note pattern of thirds. Roman numerals are assigned to each scale tone. Due to the varying step-to-step intervals in the major scale, the chords differ. The qualities are as follows:

<u>scale tone</u>	<u>quality</u>	<u>scale tones</u>	<u>written name</u>
I	major	1, 3, 5	I
II	minor	2, 4, 6	II ^m
III	minor	3, 5, 7	III ^m
IV	major	4, 6, 1	IV
V	major	5, 7, 2	V
VI	minor	6, 1, 3	VI ^m
VII	diminished	7, 2, 4	VII ^{dim.}

Major Scale-Tone Seventh Chords

Four note chords should be called quadrads. Chords built in thirds can be called “tertian”, to indicate their structure of notes three scale tones apart (inclusive, in that “A” to “C” is three letters). Quadrads constructed with an every-other scale tone are commonly called “seventh chords”. They could more descriptively be called *tertian* quadrads.

Confusingly, “seventh chord” can refer to chord types or can be an abbreviation for a dominant seventh chord. The group of chord types including major seventh, dominant seventh, minor seventh and any chord with “seventh” in its name is called “seventh chords”. A dominant seventh chord commonly has the abbreviated name “seventh chord”. C7 (C seventh) is a C dominant seventh chord. Seventh chords with the root “C” include C major seventh, C dominant seventh, and C minor seventh.

Like triads, seventh chords can be built on each tone of a major scale, using the every-other note pattern of thirds. Roman numerals are assigned to each scale tone. Due to the varying step-to-step intervals in the major scale, the chords differ. The qualities are as follows:

<u>scale tone</u>	<u>quality</u>	<u>scale tones</u>	<u>written name</u>
I	major seventh	1-3-5	I ^{ma} 7
II	minor seventh	2-4-6	II ^m 7
III	minor seventh	3-5-7	III ^m 7
IV	major seventh	4-6-1	IV ^{ma} 7
V	dominant seventh	5-7-2	V7
VI	minor seventh	6-1-3	VI ^m 7
VII	minor seventh flat five	7-2-4	VII ^m 7 ^b 5

Memorizing Global Spellings for Seventh Chords

Every major scale uses the same seven letters (A, B, C, D, E, F, G). Every major scale uses the same cycle of letters in thirds in the primary method of chord construction (below). Therefore, it is very useful to memorize parts of the cycle of thirds. Starting on different letters.

Any seventh chord (tertian quadrad) with the letter “C” in its name (C^{ma}7, C^b7, C^{#m}7^b5) uses the same four letters. All of the chords below with “C” in their letter name have the letters C, E, G and B.

<u>chord</u>	<u>spelling</u>
C ^{bma} 7	C ^b -E ^b -G ^b -B ^b
C7	C-E-G-B ^b
C ^{#m} 7 ^b 5	C [#] -E-G [#] -B

Because of this, it is very important to memorize the spelling of all seven of the tertian quadads (seventh chords) constructed from the C major scale. For each root (C, D, E, F, G, A or B), *any* seventh chord with that root in its letter name would use the seven letters. The seven tertian quadads from the C major scale are shown below.

<u>chord</u>	<u>spelling</u>
Cma7	C-E-G-B
Dm7	D-F-A-C
Em7	E-G-B-D
Fma7	F-A-C-E
G7	G-B-D-F
Am7	A-C-E-G
Bm7b5	B-D-F-A

CHORD CONSTRUCTION BY FORMULA

Chords can be constructed by specifying the numbered tones of a major scale they use. In this formula method of chord construction, chords are conceived with their root on the tone center (step “1”) of a major scale named after the chord root. The root of a chord is the letter at the beginning of its name and any sharp or flat that may be immediately after the letter in its name. Bb (“B” flat) is the root of a Bbma13#11 chord and Bb is the root of a Bb major chord.

A major chord is constructed with the first, third and fifth tones of a major scale named after the chord root, so it uses the numbered tones “1-3-5”. The formula for a major chord is “1-3-5”. A Bb major chord uses tones 1, 3, 5 of a Bb major scale. To know the specific names of the notes in a chord, you need to know the names of the notes in a major scale on its chord root. Some chord tones may be an altered version of a major scale tone, such as a “flat three”. A minor chord uses major scale tones “1-b3-5” of a major scale on the chord root.

MAJOR SCALE-TONE CHORD PROGRESSION

Chord Root Movement

The root is the note after which a chord is named. In popular music, the roots are usually the lowest note in the chord. When the root is in the bass the chord is said to be in root position. The roots of triads move in three categories: stepwise, thirds and fourths. In each of these categories, the interval is counted in a inclusive manner, so C to E would be up a third and C to A would be down a third. The root of the C chord in a C major scale could move stepwise to D or B, in thirds to E or A and in fourths to F or G.

Types of Root Movement

Stepwise order has the chord roots moving up or down in alphabetical order. Root movement in *thirds* is an every-other-note pattern (F-A-C-E-G-B-D-F-A, etc.) and is three notes from each note to the next, inclusive. *Fourths* is every fourth note, inclusive. When roots move up or down in *fourths*, two letters are skipped from each note to the next (B-E-A-D-G-C-F-B-E-A, etc.)

In each type of root movement (stepwise, thirds and fourths), look for:

- ✦ chords of the same quality with their roots a whole step apart (IV major and V major; II minor and III minor),
- ✦ ambiguous chord progressions which could occur in different parts of a major scale, but are relatively the same progression:

I major to II minor and V major to VI minor

I major to VI minor, IV major to II minor and V major to III minor
 VI minor to IV major and III minor to I major

- progressions involving chords of different quality which are unique within the major scale (III minor to IV major).

Listen for the nature of each type of major scale-tone triad root movement. In stepwise progressions, every note changes from chord to chord, producing a “processional” effect. Example: I, II_m, III_m, IV, V, VI_m VII_{dim} (notice the pair of minor and the pair of major triads).

In triad progressions up or down in thirds, two notes stay the same and one note changes from chord to chord, producing a transforming effect and the weakest of the three types of major scale-tone triad progression. Example: II_m, IV, VI_m, I, III_m.

In progressions up or down in fourths, one note stays the same and two notes change from chord to chord, producing a “pivot” effect, characteristic of hymns, jazz standards (though they use 7th chords) and Motown. Example: VII_{dim}, III_m, VI_m, II_m, V, I, IV (notice the grouping of three minor chords and three major triads).

PARENT SCALE, CHORD SCALE AND KEY SCALE

Parent Scales Defined

Chord progressions are mainly constructed from the notes of seven tone scales. Primary seven tone scales are major, harmonic minor, melodic minor and harmonic major. Other seven tone scales can be generated by using any of these with a tone center other than the first step of the scale. These other scales are called *modes*. To play an example of a mode, you would play a scale up and down an octave, beginning and ending on the desired tone center. For example, if you wanted to create a mode on the second step of the C major scale, you would play from “D” up to “D”, then back down. This would be called D Dorian mode. There are mode names for each of the seven tones of the major scale, as shown below.

modes of the c major parent scale

major scale tone	mode name	typical example, using C major scale
1	major (Ionian)	C-D-E-F-G-A-B-C-B-A-G-F-E-D-C
2	Dorian	D-E-F-G-A-B-C-B-A-G-F-E-D-C-D
3	Phrygian	E-F-G-A-B-C-B-A-G-F-E-D-C-D-E
4	Lydian	F-G-A-B-C-B-A-G-F-E-D-C-D-E-F
5	Mixolydian	G-A-B-C-B-A-G-F-E-D-C-D-E-F-G
6	Aeolian	A-B-C-B-A-G-F-E-D-C-D-E-F-G-A
7	Locrian	B-C-B-A-G-F-E-D-C-D-E-F-G-A-B

Relative Major And Minor Keys

In the [relative major and minor system](#) of key signatures, still predominant today, pieces of music are categorized as to their basic quality being major or minor. Sharps or flats are written where necessary at the beginning of a piece of music to indicate the major scale on which it is based. A Aeolian (also called A natural minor) has the same notes as C major. C major is the relative major of A Aeolian and A Aeolian is the relative minor of C major.

If the piece of music sounds resolved on a minor chord, the key signature indicates a key in Aeolian mode, named after the letter name of the root of the chord (including any necessary sharp or flat in the name), on the sixth step of the major scale indicated by the key signature. If the piece is based on a minor chord but is not in Aeolian mode, accidentals (sharps or naturals) are writing before particular notes in the body of the music notation to alter the Aeolian mode that was indicated by the key signature.

Modes of Harmonic Minor

There are mode names for each of the modes of harmonic minor, as shown below. Harmonic minor is a variant of Aeolian mode, where the seventh note of Aeolian is raised a half step. This is equivalent to raising the fifth tone of the parent major scale. As you can see below, A Aeolian has had its seventh tone "G" raised (compare to the chart above). C major sharp five below is the altered version of A Aeolian's parent major scale, C major.

Modes Of The A Harmonic Minor Parent Scale:

harmonic minor tone	mode name	typical example, using A harmonic minor
1	harmonic minor	A-B-C-D-E-F-G#-A-G#-F-E-D-C-B-A
2	Locrian natural six	B-C-D-E-F-G#-A-G#-F-E-D-C-B-A-B
b3	major sharp five	C-D-E-F-G#-A-G#-F-E-D-C-B-A-B-C
4	Dorian sharp four	D-E-F-G#-A-G#-F-E-D-C-B-A-B-C-D
5	Phrygian major	E-F-G#-A-G#-F-E-D-C-B-A-B-C-D-E
b6	Lydian sharp two	F-G#-A-G#-F-E-D-C-B-A-B-C-D-E-F
7	"Mixolydian sharp one"	G#-A-G#-F-E-D-C-B-A-B-C-D-E-F-G#

Key Scales Defined

The key scale is named after the tone center (defined earlier). You would expect the section (or song) to end on the note after which the key is named. It is generally best to predominate a melody with key scales that retain a melodic thread which moves toward its eventual goal of the tonic chord.

Chord Scales Defined

For the purpose of considering a chord as a temporary key (to improvise on it, for example), the root of the chord can be considered a temporary tone center. You should determine in context which type of scale would be used on the chord. The chord scale for adjacent chords in a progression would typically share the same parent scale. For example, Dm could use D Dorian mode, G major could use G Mixolydian, where the parent major scale is C major (since the notes of D Dorian, G Mixolydian and C major are all the same). If too much focus is put on chord scales rather than key scales, the music can sound fragmented and disjointed.

MODULATION AND VOICE LEADING

Modulation Through Pivotal Relationships

Memorize all major scale-tone triads, seventh chords and modes. Be able to recall them in stepwise order, in thirds and in fourths; ascending and descending order. Begin to conceive major scale-tone chord progressions in many keys. Abstractly combine the chords from one major scale with those from another through (1) a chord common to both of them, or (2) use of an altered chord and a second major scale set of chords that includes the altered chord.

Compose ten triad chord progressions of four chords or more each. For the first five or so progressions, use triads exclusively from one major scale (Book 3, Chapter 25, pages 285-287). Any triad of the major scale may be the main chord (mode). Mix the root movement between stepwise, thirds and fourths (you don't have to use all three types in each progression).

For the next couple of progressions, use a pivotal chord common to two major scales. For the last couple of progressions, use of an altered chord and a second major scale set of chords that includes the altered chord.

Voice Leading

In studying the arrangement of chord tones of one chord moving to those of another, each note in a chord is called a *voice* and has a logical destination in the next chord. As a voice progresses through a number of chords, it creates a *voice path*. The study of the path created by each voice is called *voice leading*. The study of the matrix of paths created by a number of voices is called *voice mapping*. Voice leading is explained in further detail in the chapter on [voice leading](#).

RECOGNIZING CHORD PROGRESSIONS

The two most effective clues to use in recognizing which major scale a progression was constructed on are:

- Two chords of the same quality on adjacent scale steps, where you should suspect they are derived from steps two and three of a major scale if they are both minor or steps four and five of a major scale if they are both major. The chords don't need to have occurred in alphabetical order in the progression, you can re-order them.
- Two or more chords whose roots can be ordered in perfect fourths.

Unaltered Major Scale-Tone Chord Progression Exercise

Listen to each song (if you have the recording). Play the progression on Songs By Letter Name. Determine the major scale from which the chords came and the tonic chord (chord you would expect the song or section to end on). The chords won't necessarily occur in the same order in the song as they do on the Major Scale-Tone Chords reference chart. Look for:

- (1) two chords of the same quality that could be put in alphabetical order.
- (2) two or more chords that could be put in an order of fourths. Identify the major scale in which the chord qualities would match those in the song (major, minor).

<u>title</u>	<u>parent scale (of)</u>	<u>tonic chord</u>	<u>key scale (in)</u>
Afro Blue, section A	Eb major	Fm	F Dorian
Afro Blue, section B	Ab major	Fm	F Aeolian
Ain't No Sunshine	C major	Am	A Aeolian
All Along the Watchtower	Eb major	Cm	C Aeolian
Black verse	A major	E7	E Mixolydian
Blue Moon	C major	C	C major
Come To My Window	C major	C	C major
Flake verse	F major or Bb major	Dm or F	D Aeolian or F major (more likely than modes of Bb major)
Heart of Gold intro	G major	Em	E Aeolian
Heart of Gold verse	G major	G	G major
Hound Dog	C major	C	C major
How's It Gonna Be	F major	F	F major
Imagine verse and bridge	C major	C	C major
I'm Lookin' Through You	G major	G	G major
Island In the Sun	G major	G	G major
Knockin' On Heavens	A major	A	A major
Kodachrome verse	E major	E	E major
Like A Rolling Stone	C major	C	C major
Minority (exclude the B chord)	C major	C	C major

Polly verse	G major	Em	E Aeolian
Runaway chorus	A major	A	A major
Say It Ain't So verse	E major	E	E major
Save Tonight	C major	Am	A Aeolian
Soul To Squeeze (after intro)	F major	F	F major
Sympathy For Devil verse	A major	E	E Mixolydian
Time Of Your Life	G major	G	G major
Under the Boardwalk verse	G major	G	G major
Under the Boardwalk chorus	G major	Em	E Aeolian
What's It like	C major or F major	Dm	D Dorian or D Aeolian
Yellow Ledbetter	E major	E	E Major

Altered Major Scale-Tone Chord Progression Exercise

chords changed to set up a cadence

In each case, a chord on the fifth step of a major scale based on the target chord is changed from minor to major.

III^m chords of the parent major scale changed to III major (V of VI^m: V of chord scale to VI^m of parent scale)

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>V of target chord</u>	<u>target chord</u>
Put Your Lights On	C major	A Aeolian	E	Am
Runaway verse	C major	A Aeolian	E	Am
Flake chorus	F major	D Aeolian	A	Dm

II^m chords of the parent major scale changed to II major (V of V: V of chord scale to V of parent)

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>V of target chord</u>	<u>target chord</u>
Are You Lonesome Tonight	C major	C major	D	G (target chord)
Help! intro.	D major	D major	E	A (target chord)

in "Help!" intro., the progression suggests that it would end on a D major chord, but D major is never played.

VI^m chords of the parent major scale changed to VI major (V of II^m: V of chord scale to II^m of key and parent scale)

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Me and My Uncle	D major	E Aeolian	B = V of II ^m (B ^m to B major)
Kodachrome chorus	A major	A major	C# = V of VI (C# ^m to C# major), F# = V of II ^m (F# ^m to F# major)

I chords of the parent major scale changed to I7 (V of IV: V of chord scale to IV of parent)

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>V of target chord</u>	<u>target chord</u>
Are You Lonesome Tonight	C major	C major	C7	F (target chord)

chord qualities changed to alter the mood

darkening the mood by changing major chords to minor

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Sleepwalk	C major	C major	F changed to F ^m

brightening the mood by changing m7 or major seventh chords to dominant seventh

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
--------------	--------------------------	-----------------------	-----------------------

Black chorus	G major	E Aeolian (alt.)	Em7 changed to E7
--------------	---------	------------------	-------------------

brightening the mood by changing minor chords to major

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Ends verse	Bb major (alt.)	G Aeolian (alt.)	Gm changed to G
Imagine chorus of F)	C major (alt.)	C major (alt.)	Em changed to E (becomes lower chromatic)
Fly Away	G major (alt.)	Bb Aeolian (alt.)	Bbm changed to Bb, Ebm changed to Eb
In Bloom verse	Db major (alt.)	Bb Aeolian (alt.)	Bbm changed to Bb, Ebm changed to Eb B and A are upper & lower chromatics to Bb
Polly bridge	F major	D Aeolian (alt.)	Dm changed to D, Gm changed to G

darkening the mood by changing major seventh chords to dominant seventh

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Torn	Eb major	F Dorian	Bbma7 changed to Bb7 (as in a Blues in F)

mode (scale) changed to alter the mood

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>changed chord(S) and description</u>
Say It Ain't So bridge B B E	E major	B Mixolydian	G changes to B Aeolian

pivotal chords (in two or more major scales in their unaltered form)

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Help! verse	A major/D major	A major/A Mixo.	D is of A and D major, G = bVII of A Mixo, V of D
You've Got To Hide verse	G major/C major	G major/G Mixo.	C and G are of C and G major, F = IV of C, bVII in G Mixo.

extractions from longer progressions

<u>title</u>	<u>parent scale (of)</u>	<u>key scale (in)</u>	<u>altered chords</u>
Debasser	F major	F major	Gm changed to G major (suggests G would progress to C, although it doesn't). Extracted from F Bb G C, without the C.

Chord Options for a Melody

- **Expand Your Palette of Chord Options for a Melody**
- **Create or Find a Melody**
- **Determine the Core Melody**
- **Write Down the Core Melody Letter Names**
- **Define the Scale**
- **Find Chord Options for Each Core Melody Note**
- **Examples**

EXPAND YOUR PALETTE OF CHORD OPTIONS FOR A MELODY

Develop the Ability to Compose and Improvise

How do you develop the ability to compose and improvise?

- Memorize fingerings for seventh chords with roots ascending in fourths.
- Learn secondary dominants and flat five substitutes and the fingerings for them.
- Think of chords as a collection of voices, like a vocal or instrumental group and direct the movement of each voice with movement by small or predictable intervals.
- Think the rhythm for your improvisation separate from the pitches, then put the two together.
- Key scales are named after the key and are easier for the listener to predict your melody. Chord scales illustrate the sound of each chord, but you should predominate your melody with key scales, using chord scales sparingly.
- Improvise emotively. Sing your melody as you play it.
- For each recording or performance, work up a few sketches of chord progression and melody to make your performance meaningful and memorable.

Purposing Chord Options

You can use what you learn in this chapter in composing, arranging and improvising. You could determine chords for a melody (a cover song melody, your original or in your improvisation) and conceive other chord options for:

- Another song section with the melody in another key and/or another mode.
- A version of the chords to be used in an improvisation where the accompaniment is playing one progression and you suggest a different but compatible one in your improvisation.
- Another version of the original section with more elaborate chords to be played as an interlude or intro. Imagine Kingston Trio performing *Tom Dooley* on the Hootenany TV in the early sixties (the American folk era) where the Kingston trio played and sang two verses with only the simple E and B7 chords, followed by a small orchestra and choir singing a more elaborate and lush alternate version of the chords, while a harmonica plays the melody.

CREATE OR FIND A MELODY

Create an original melody or use an existing melody of three to ten notes (to make the process manageable).

DETERMINE THE CORE MELODY

The core melody has fewer notes, using the main notes of the original melody. See Part 5 of this course, including the chapters [Core Melody on Triad Chord Progression](#), [Core Melody on Quadrad Chord Progression](#) and [Core Melody Built with Duality Tones](#).

WRITE DOWN THE CORE MELODY LETTER NAMES

Write the core melody in letter names on a piece of paper from left to right *in pencil*, spaced to allow writing columns of chord names in rows beneath the row of core melody note names.

DEFINE THE SCALE

Consider a major scale (or one of 3 other harmonizable 7 note scales) that includes ALL THE MELODY NOTES. On Number & Letter Cycles page 2, look for a candidate major scale that includes all of your melody notes). For example, E-G-B are in the C major, G major and D major scale. Begin by considering one of those major scales at a time until you are more proficient. If the melody you are considering is solely the notes of a major or minor pentatonic scale (Tom Dooley is E major pentatonic), there will be three major scale candidates. Six-tone scales: if the melody is a minor pentatonic add 2 or b2 or is a major pentatonic add 4 or sharp 4, there are two major scale candidates.

FIND CHORD OPTIONS FOR EACH CORE MELODY NOTE

Choose a scale in a common mode first, like major, Dorian, Mixolydian or Aeolian. With triads, for EACH CORE MELODY NOTE “back cycle” thirds to find the three possible chord roots by going counter-clockwise on “Thirds Letter Cycles in All Keys”, below. Think of the letters with their chord names, where I, IV and V are major; II, III and VI are minor and VII is diminished. A “G” note in a C scale could have a C, E or G root. To find the C, E and G, back-cycle thirds, which means I started on “G” and went counter-clockwise in the cycle of thirds to include three letters (C-E-G) where for each letter a three note chord would include the note “G”. C-E-G is C major, E-G-B is Em and G-B-D is G major.

Thirds Letter Cycles in All Keys

For each cycle, the key letter name is below the number “1”.

WRITE CHORD NAMES FOR EACH MELODY NOTE

Write one of the possible chord names for each melody note below it, to begin forming a row of chord names. Write lightly in pencil at first, so you can easily change chord options to create sequences of chords that are likable to you and appropriate in mood and style for your developing song.

Number and Letter Cycles see the thirds on the second page Back Cycling Thirds

I Saw Her Standing There, Roots and Fifths in the Bass

This tablature provides a bass line for the song "I Saw Her Standing There," focusing on playing the root and fifth of the chords in the bass. The key signature has one flat (Bb), and the time signature is 4/4. The progression consists of 16 measures, grouped into four systems of four measures each. Chords are indicated above the staff: C7 (measures 1-4), F (measures 5-8), G7 (measures 9-12), and Ab (measures 13-16). The bass line uses a consistent pattern of eighth notes for the root and fifth of each chord, with triplets indicated by a '3' over the notes. Fingering is indicated by numbers 0-4 on the strings.

System 1 (Measures 1-4): Chords C7, F, C7. Bass line: C7 (root, fifth), F (root, fifth), C7 (root, fifth).

System 2 (Measures 5-8): Chords C7, G7, G7, G7. Bass line: C7 (root, fifth), G7 (root, fifth), G7 (root, fifth), G7 (root, fifth).

System 3 (Measures 9-12): Chords C7, F, Ab, Ab. Bass line: C7 (root, fifth), F (root, fifth), Ab (root, fifth), Ab (root, fifth).

System 4 (Measures 13-16): Chords C7, G7, C7, C7. Bass line: C7 (root, fifth), G7 (root, fifth), C7 (root, fifth), C7 (root, fifth).

BASSLINE PICKUPS

What is a Bassline Pickup?

A bassline pickup is a series of notes played before the first beat of a chord. The chord being led into is the target chord. The notes may come from an arpeggio or scale. They may represent the sound of the chord they precede or they may represent the sound of a chord that progresses to the target chord.

three-note C major scale pickup

one note pickup, using a scale-tone neighbor of the target

C major pentatonic pickup with the last note as a neighboring tone of the target chord

G major pentatonic pickup with an octave displacement to low C

The Target Chord

The target chord can be any chord in a chord progression, commonly the first chord in the chord progression. It usually begins on the first beat, but it can be on the third beat in 4/4, or even the third beat in 3/4. The target tone is the first note played at the beginning of the target chord.

The Setup Chord

The setup chord is the chord preceding the first beat of the first bar of the main chord progression. For example, G7 can precede C. G7 can be represented with a G major pentatonic, G Mixolydian mode (G major scale with flat seven = C major scale), a G major arpeggio or a G7 arpeggio.

Scales And Arpeggios Used in Pickups

arpeggios

pentatonic scales

heptatonic (7-tone) scales

arpeggios with passing tones and neighboring tones

pentatonic scales with added tones (add 4 for major, add 2 for minor)

Rhythms Used in Pickups

continuous eighths, triplets or sixteenths

Irregular rhythms

combined quarters and eighths, rhythmic words, syncopated series

The Linear Pickup

A linear pickup is a series of ascending or descending scale or arpeggio tones that precede the target chord in ascending or descending order.

Non-Linear Pickups

When a scale or arpeggio changes direction in regard to ascending or descending, it is non-linear. Pickups don't have to be entirely linear. They are usually all or mostly linear.

skipping to a neighbor of the target at the last pickup tone

resolution with an octave displacement

The Pickup Bar

The pickup bar, sometimes called bar zero in software, is the bar preceding bar one, the beginning of a section. The pickup bar can contain notes of an arpeggio or scale for the setup chord (G7) or the target chord (C).

Setup Chord Pickups During the Target Chord

Setup chord pickups can also be used during a target chord, where a setup chord (G7) is sounded in the melody, but not in the accompaniment. In such a situation, the setup chord should be one to two seconds at most, usually closer to one second. At 120 BPM, two beats is one second. Otherwise, the listener will have too long a time to ponder the “mismatching” of the melody and accompaniment chords.

The Pickup Series

Start with increasing numbers of pickups, using the pickup series.

pickup with tones (or a scale) of the setup chord

Play one note (the setup tone) of G7 as the last eighth note in the pickup bar. Then play a single triad tone of the target chord, with the smallest interval possible from the setup tone or the setup tone can be “5” of the key of the target chord (the note “G”), progressing to “1” of the target chord (the note “C”).

Progressively add more pickup notes as in the pickup series. For example, play the last eighth note in the pickup bar, then the last two eighth notes, the last three, etc.

pickup with tones (or a scale) of the target chord

Play one note of C as the last eighth note in the pickup bar. Then play a single triad tone of the target chord, with the smallest interval possible from the setup tone or the setup tone can be “5” of the key of the target chord (the note “G”), progressing to “1” of the target chord (the note “C”). Progressively add more pickup notes as in the pickup series.

Adding Chromatics

Chromatics may be added between 2 and 3 or between 5 and 6 of major pentatonic. Chromatics may be added between 4 and 5 or between b7 and 1 of major pentatonic.

The Strength Of Resolution

strength of resolution according the last pickup tone

The last pickup tone will be well-remembered by the listener, usually strongest of the pickups tones. The last pickup tone can be a setup chord tone, a neighboring tone of the target tone, a lower chromatic for the target tone. The setup tone can also be the fifth of the key of the target chord progressing to the root of the target chord. In order of strength, they are:

strong: lower chromatic of the target tone or fifth of the target chord progressing to the root

moderate: a neighboring scale tone of the target tone

weak: a chord tone that is not a neighbor of the target tone

the lower sixth and upper flatted third as neighboring tone pickups

Both of these resolve to the root of the target chord. As a lower neighboring tone, the sixth of the target chord may approach from below to the root of the target chord from below, usually in the context of a major pentatonic scale. With another minor third interval, the flat three of the target chord may approach from above to the root of the target chord.

strength according the quality of the setup chord

Setup chords that are better known to progress to target chords are stronger in their resolution to the target chord.. Dissonant V or bII of target chords are very strong in their resolution to the target chord.

DRONE AND PEDAL POINT

History

A drone is a continuous low-pitched buzz or hum. Vocally, a drone is used in chants in many world cultures. The raga, a classical East Indian Hindu musical form nearly two thousand years old, uses a drone. American Indian chants (often called pow-wow) use a drone in a pulsing fashion. Bagpipes, a commonly Scottish instrument, use a drone and are found throughout Europe, Northern Africa, the Persian Gulf, and the Caucasus. It is said that Roman Emperor Nero played bagpipes (C. Suetonius Tranquillus: “The Lives of the Twelve Caesars”, 54).

Archelological dating of paintings on cave walls and shelters in Northern Australia suggests that the Aboriginal people of the Kakadu region of the Northern Territory have been using a drone pipe instrument called the diggeridoo for at least 1,500 years.

The berimbau in Brazil is a single-stringed instrument with a gourd resonator that produces a drone. The string is rubbed with a stone. It is said that its origins are in South Africa, where there are similar instruments (Funso Afolayan: “Culture and Customs of South Africa”, page 240-241)

Beginning in the twelfth century in Europe, choral pieces sometimes included held notes in one of the voices that did not necessarily harmonize with the chords produced by the other voices. The tradition was carried over to the church organ, when church organists began a tradition of sustaining a bass note while changing chords on the keyboard above it. The device was given the name *pedal point* and later *organ tone* and *pedal tone*. The term pedal tone is ambiguous, since it also refers to the fundamental harmonic tone on tubular mouthpiece instruments.

Establishing a Tone Center

The pedal point can be a very effective device in establishing a tone center by sustaining or repeatedly playing the same note in the bass. Some pedal point chords may be part of a succession of chords that establishes an architecture important enough to forgive the dissonance of one or more of the chords. The C# diminished chord below was used in this Bach Prelude in Dm shown below, as part of a succession of chords leading to Dm.

emphasize 2-4-6

Mixolydian (on 5)
emphasize 5-7-2

Aeolian (on 6)
emphasize 6-1-3

Each set of “Open Bass Pedal Point Modal Triads” shown below uses a particular scale as its basis. When the scale is Mixolydian, it uses a major scale where the key noted in the title is on the fifth step of that major scale. Dorian is on the second step of its parent scale, and Aeolian on the sixth step.

key scale	<u>key tones</u>	<u>parent major scale</u>	<u>parent major scale tones</u>
A major	A-B-C#-D-E-F#-G#-A	A major	A-B-C#-D-E-F#-G#-A

TRIADS AS A HARMONIC OR MELODIC BASIS

Triads can be a structural basis to your comping or soloing. During a single chord, use any of the seven triads in its [parent scale](#), emphasizing those in the current chord, de-emphasizing ones not in the current chord and creating tonal and stylistic environments for any that you dwell on.

Read more about this in [Tonal Layers](#)/[Harmonic Clusters](#)/[Triads As A Harmonic Or Melodic Basis](#).

THIRDS AND SIXTHS WITH PEDAL POINT

The examples in this chapter are all I-IV-I7, in various modes. Also see the chapter “[Thirds and Sixths](#)”/ [Chords Implied by Thirds and Sixths](#).

Retain the I Chord’s Root Through All Three Chords

In each of these voicings, all the chords have three notes. The root of the I chord is retained through all three chords. As you play whichever version of I-IV-I7 you choose in the order I-IV-I7, the root will remain while the other two notes ascend in thirds or sixths.

The Two Notes Other Than the I chord Root Move in Thirds or Sixths

voice leading for close-voiced I-IV-I7 progression with three-note chords

With close-voiced I-IV-I7 chords (of any mode):

- When the I chord root is the lowest note in close-voiced I-IV-I7 progressions, the other two notes will move on the top (the highest pitches) in thirds.
- When the I chord root is the highest note in close-voiced I-IV-I7 progressions, the other two notes will move on the bottom (as the lowest pitches), in thirds.
- Close-voiced I-I-I7 progressions with the root as the middle pitch are combined with the top and bottom notes in sixths.

voice leading for open-voiced I-IV-I7 progression with three-note chords

With open-voiced I-IV-I7 chords (of any mode):

- When the root of the I chord is in the bass in open-voiced I-IV-I7 progressions, the other two notes will move above it in sixths.
- When the root of the I chord is in the middle of the three notes in open-voiced I-IV-I7 progressions, the other two notes will move above and below in tenth intervals.
- When the root of the I chord is the top voice in open-voiced I-IV-I7 progressions, the other two notes will move below it in sixths.

Make Note of the Quality of the Third or Sixths Changing or Retaining

With both close-voicing and open voicing, the thirds or sixths will change quality, then change again as you ascend I-IV-I7 in Mixolydian. In Phrygian major, they will retain, then retain again. Make note of the pattern of third or sixths in regard to “change” and “retain” for each modal I-IV-I7. This also applies to the tenths in open-voiced I-IV-I7, since a tenth is an octave and a third.

1-Major (Ionian), I-IV-I^{ma}7ⁿ3 (thirds or sixths ascend: “change-retain”)

“I-IV-I^{ma}7” indicates a I major chord, a IV major chord, then a I chord of a major seventh quality (I⁷), without a third (I^{ma}7ⁿ3). Based on a major scale named after the root of the I chord, the chords use tone the following scale tones: I is 1-3-5, IV is 4-6-1 and I⁷ no third is 1-5-7. Orient the fingerings below by keeping “1” on the same note. In I-IV-I^{ma}7ⁿ3, three moves to four, then to five. Five moves to six, then to seven.

2-Dorian, Im-IV-Im7n3 (thirds or sixths ascend: “retain-change”)

“Im-IV-Im7n3” indicates a I minor chord, a IV major chord, then a I minor seventh chord without a third (I7n3). Based on a major scale named after the root of the I chord, the chords use tone the following scale tones: Im is 1-b3-5, IV is 4-6-1 and Im7 no third is 1 -5-b7. Orient the fingerings below by keeping “1” on the same note. In Im-IV-Im7n3, flat three moves to four, then to five. Five moves to six, then to flat seven.

3-Phrygian, Im-IVm-Im7n3 (thirds or sixths ascend: “change-retain”)

Phrygian Im-IVm-Im7n3 is the same as [Aeolian Im-IVm-Im7n3](#). “Im-IVm-Im7n3” indicates a I minor chord, a IV minor chord, then a I minor seventh chord without a third (Im7n3). Based on a major scale named after the root of the I minor chord, the chords use the following scale tones: Im is 1-b3-5, IVm is 4-b6-1 and Im7 no third is 1-5-b7. Orient the fingerings below by keeping “1” on the same note. In Im-IVm-Im7n3, flat three moves to four, then to five. Five moves to flat six, then to flat seven.

7-Locrian or Aeolian flat five, Idim-IVm-Im7b5n3 (thirds or sixths ascend: “retain-change”)

Locrian and Aeolian flat five differ only in that Locrian has flat two (1-b2-b3-4-b5-b6-b7) and Aeolian flat five has natural two. The Idim-IVm-Im7b5 no third progression doesn't use a “2”, so it can be used on both scales.

“Idim-IVm-Im7b5n3” indicates a I diminished chord, a IV minor chord, then a I minor seventh flat five chord without a third (Im7b5n3). Based on a major scale named after the root of the I chord, the chords use tone the following scale tones: Idim is 1-b3-b5, IVm is 4-b6-1 and Im7b5 no third is 1-b5-b7. Orient the fingerings below by keeping “1” on the same note. In Idim-IVm-Idim7n3, flat three moves to four, then to flat five. Flat five moves to flat six, then to flat seven.

Remember to Retain the Root

The most important thing to remember in working out voicings is that note that is the root of the original chord does not change. The remaining voices move up, typically in parallel on adjacent strings.

Notes Other than the Root Move in Thirds or Sixths

The typical [voice leading](#) for this progression retains the root, moves the third and fifth up a step to the fourth and sixth, making a IV chord (IV is 4, 6, and 1). Next, the fourth and sixth each move up another step to the fifth and seventh, making a I7(no third) chord. The I7(no third) chord uses scale tones 1, 5 and 7. "5" and/or "7" may be flat, according to the mode. "5" is sharp in some modes.

The two voices other than the root move in parallel thirds. It is effectively two notes harmonized in thirds over a pedal point. With inversions, these notes other than the original root may move in parallel sixths or tenths (an octave and a third). Remember, this also applies to tenths in open-voiced I-IV-I7, since a tenth is an octave and a third.

I-IV-I7 Can be Used in Different Order

Often songs have used I-IV-I7 in reverse order: I7-IV-I.

Modal I-IV-I7 Progression

The I-IV-I7 chord progression may be based on each of many seven tone scales. Each scale may use different versions of the numbers, such as b7 for Mixolydian, but the numbers remain the same. It is very useful to note the *changes of intervals* in the I-IV-I7 progression particular to each scale. In Mixolydian, for example (I-IV-I7), the two moving notes change interval each time they ascend. They change from I to IV. They change again from IV to I7n3. In Dorian mode, they stay the same from Im to IV, then change from IV to Im7n3. Phrygian and Aeolian are identical, since the I-IV-I7 chord progression does not use scale tone two. Phrygian major is commonly usable, harmonic minor is not.

<u>mode</u> <u>scale</u>	<u>progression</u>	<u>movement of thirds in parent</u>
major (Ionian)	I-IV-Ima7n3	3 minor, 4 major, 5 major
Dorian	Im-IV-Im7n3	4 major, 5 major, 6 minor
Phrygian (same as Aeolian)	Im-IVm-Im7n3	5 major, 6 minor, 7 minor
Lydian	I-IV diminished-Ima7n3	6 minor, 7 minor, 1 major
Mixolydian	I-IV-I7n3	7 minor, 1 major, 2 minor
Aeolian (same as Phrygian)	Im-IVm-Im7n3	1 major, 2 minor, 3 minor
Locrian	I diminished-IVm-Im7b5n3	2 minor, 3 minor, 4 major
Phrygian major	I-IVm-I7n3	5 major, b6 major, b7 major

Using Modal I-IV-I7 for Secondary Roots

Secondary roots are commonly used to create substitute chord progression. You need to know the cycles of thirds and fourths. See [Number And Letter Cycles](#) in [Note Sets, Structures And Design](#).

Using secondary roots on the third or sixths create harmony parts. Secondary roots on the fifth can create harmony parts in the high range or a shift of emphasis to the “IV” chord of “I-IV-I7”.

know the chord type you are starting with

The chord quality of the chord you are enhancing can tell you its type. Major chords can be I, IV or V types; or can be a III major type which usually comes before a VIIm type (with the roots progressing up a perfect fourth).

Chords built on the first step of a major scale are major seventh. Major seventh chords are usually a I type, unless the scale has a sharp four, in which case they are a IV type.

Minor chords can be a IIIm or VIIm type, more commonly treated as a VIIm type. IIIm type is common to blues in major keys, often used in place of a V type. The only modal difference between the IIIIm type (Phrygian mode) and VIIm type (Aeolian mode) is that IIIIm type has a flat two. Since the I, IV, I7 progression doesn't use a “2”, it is the same for IIIIm type and VIIm type. So, you can usually think of IIIIm as VIIm, as far as I, IV, I7 voicings.

secondary roots on the third

Playing a I-IV-I7 progression modally on the third (of the appropriate type) of the original chord makes the original sound like a ninth.

For any scale tone chord, you need to know its numbered type (I type, V type). The secondary root on the third is two consecutive numbers higher, and is the next number *clockwise* in the cycle of thirds (see [Number And Letter Cycles](#)).

secondary roots on the sixth

Playing a I-IV-I7 progression modally on the sixth (of the appropriate type) of the original chord makes the original sound like a sixth. This can only be done on I-IV-V and IIIm chord types, which are the only major scale-tone sixth chords. Sixth chords cannot (are not acceptable) have a flattened or sharpened sixth. Modes III, VI and VII of the major scale have a flat sixth, so are not acceptable.

For any scale tone chord, you need to know its numbered type (I type, V type). The secondary root on the sixth is two consecutive numbers lower, and is the next number *counter-clockwise* in the cycle of thirds (see [Number And Letter Cycles](#)).

For the I, IV and V chords this is the relative major and relative minor relationship. The traditional relative minor of I is VIIm. Modally, the same relationship occurs for IV type chords with a relative IIIm

and for V type chords with a relative IIIm.

IIIm has what could be called a “relative VII diminished”. The “relative diminished” of Dm is B diminished.

secondary roots on the fifth

Most commonly, secondary roots on the fifth can be used to emphasize the *second* chord in the I, IV, I7 progression, the “IV chord”.

In using I-IV-I7 on the fifth of a I type (the original chord being enhanced), for example, it would be “V-I-V7”, and should emphasize the second chord “I”. Restated in letters, I-IV-I7 on the fifth of the I type C major would be G-C-G7 (I-IV-I7 in G, which is mode V of C). This should emphasize the second chord “C”, which is the original chord being enhanced.

Playing a I-IV-I7 progression modally on the fifth (of the appropriate type) of the original chord can make the original sound like an eleventh. The following types work:

original chord type	type on fifth	eleventh version of original
IIIm type	VIIm type	IIIm11
IV type	I type	IVma9#11
V type	IIIm type	V11
VIIm type	IIIIm type	VIIm11
VIIIdim type	IV type	VIIIm11b5b9

The VIIIm11b5b9 is not currently acceptable as a chord, but it works melodically as an arpeggio.

Other Pedal Point Thirds

See the chapter “[Thirds and Sixths](#)”/Chords Implied by Thirds and Sixths.

PEDAL POINT TRIADS

Using Triads to Create the Movement of Voices

While a single chord or is being played or while a bass note is being sustained, a series of triads may be played, making the music more interesting. One or more of the triads represent the current chord played by the accompaniment (or conceived by the soloist if there is no accompaniment). Scale tone triads are typically used in this situation, where some of the triads represent versions of the current chord. Other triads are transitory and move to and between the main chords that represent the current chord.

stepwise root neighbors

If C major is the chord in mind or “target chord”, chords may be played briefly and less emphasized on neighboring stepwise roots of the parent F major scale, like Bb a step below and Dm built a scale above the “C” root of the C chord. Bb and Dm would cause movement of three notes to and from the C major triad. C major triad tones C-E-G progressing to Dm would move all three notes up a scale tone to D-F-A or progressing to Bb would move all three notes (C-E-G) of the C triad to Bb-D-F.

perfect fourth root neighbors

Similarly, chords may be played on roots up or down a fourth from the C root, an F major triad rooted up a fourth or a G minor triad rooted down a fourth. Triads with roots up or down a fourth each cause two notes to move to and from the C-E-G tones of the C triad, changing to F-A-C for the F major triad or to G-Bb-D for the G minor triad.

Subset Triads

Seventh and larger chords have four or more notes and groups of three of those notes can make up a triad. Memorize the scale tone triads shown below in three inversions, in stepwise order, for the parent scale (such as the major scale) that you are using, then learn alternate names for the versions of the current target chord in mind. “nr” means no root. “n3” means no third. “n5” means no fifth.

memorize a few patterns and rules to be able to predict all these pages

Don't memorize the following pages of subset triads. Instead, memorize the order of thirds to build triads, the three parent scale numbers that make up each triad. From there, learn which parent scale numbered tone is the root, third fifth and sixth of the target chord. Learn the type of chord that always occurs with a triad on the third, the type with a triad on the fifth and the type with a triad on the sixth. Especially see [Secondary Root Triads for Each Scale Tone below](#) (about twenty pages long).

memorize the cycle of thirds

The cycle of thirds is 1-3-5-7-2-4-6-1-3-5, etc. It is a repeating cycle of 1-3-5-7-2-4-6, as expressed by the circle below. Memorize the role of each numbered parent scale tone for root, third, fifth and sixth.

thirds in all keys

In the enharmonic keys C and Db, F# and Gb, B and Cb, the pitches are the same, but given different names.

memorize the parent scale numbers for each triad

I major is 1-3-5, II minor is 2-4-6, III minor is 3-5-7, IV major is 4-6-1, V major is 5-7-2, VI minor is 6-1-3, VII diminished is 7-2-4.

major scale fingerings

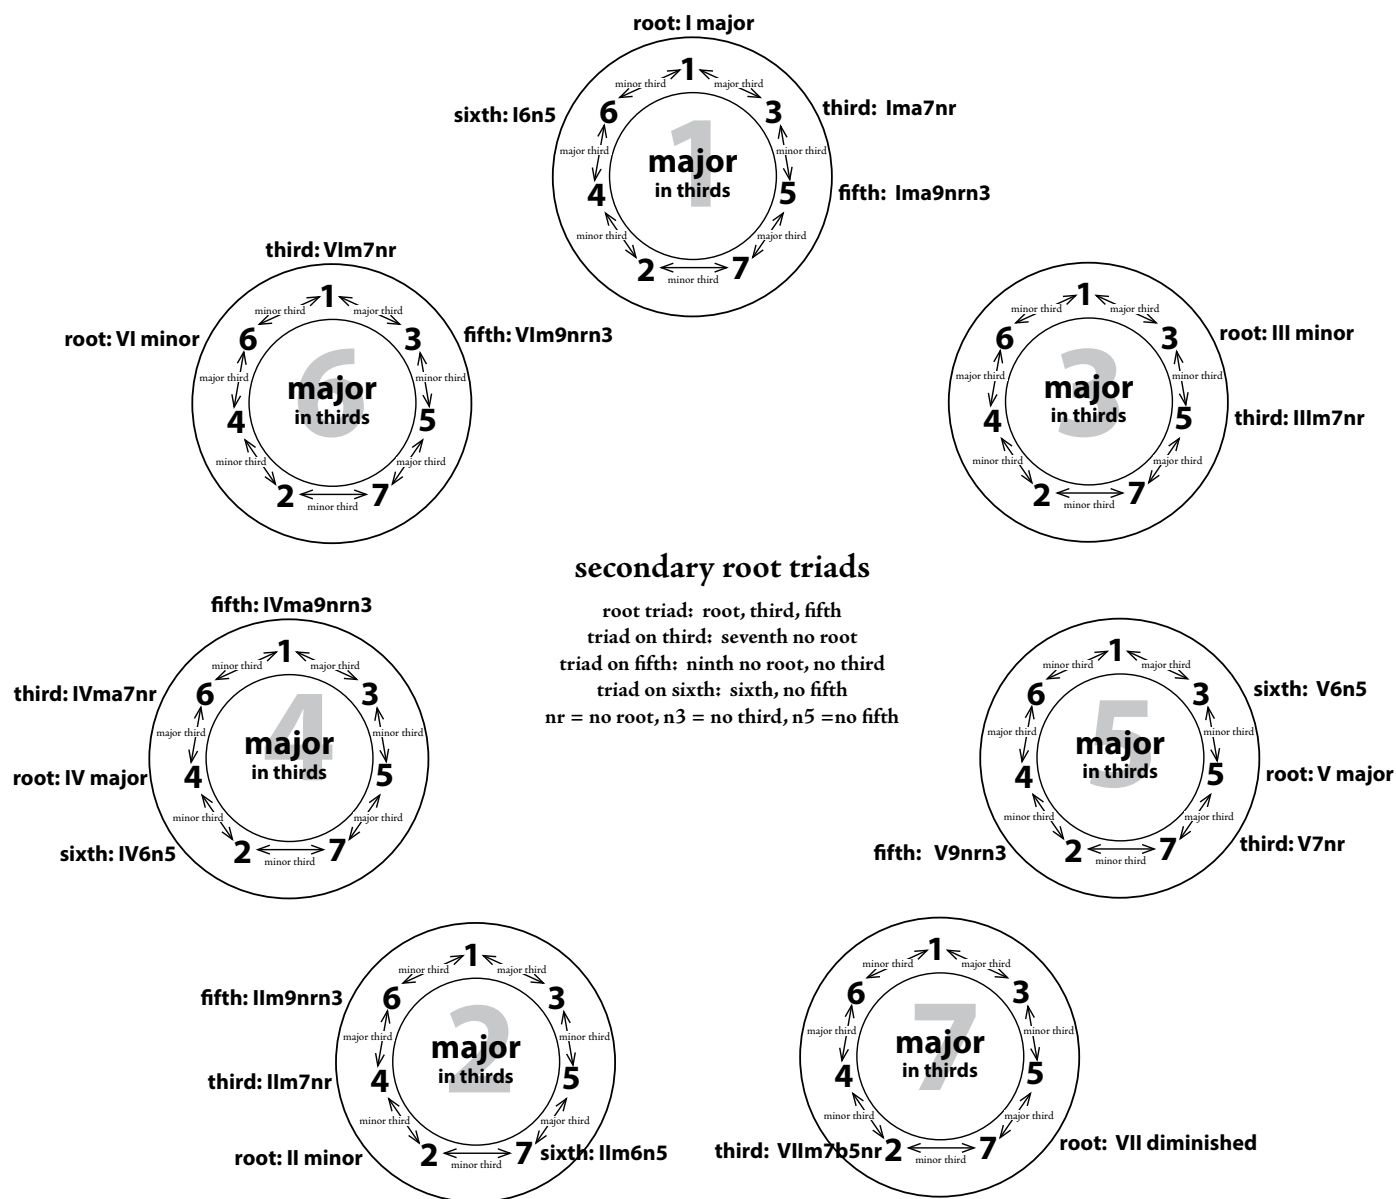

secondary root triads on the third, fifth and sixth of the target chord

nr= no root, n3 = no third, n5= no fifth. The triad on the third of a target chord is the notes of the triad up a third and is the seventh version the target chord without a root (I_{ma}7nr, II_m7nr, III_m7nr, IV_{ma}7nr, V₇nr, VI_m7nr or VII_m7b5nr). The triad on the the fifth of a target chord that can be a ninth (excluding III_m and VII dim. chords) makes a ninth chord with no root and no third (I_{ma}9nrn3, II_m9nrn3, IV_{ma}9nrn3, V₉nrn3 or VI_m9nrn3). With the four major scale tone chords that can be sixth chords (I₆, II_m6, IV₆ and V₆), the triad on the sixth of the target chord is a sixth chord with no fifth (I₆n5, II_m6n5, IV₆n5 or V₆n5).

Lettered examples below are shown in the key of F.

Secondary Root Triads for Each Scale Tone

memorizing the triads and their secondary root function

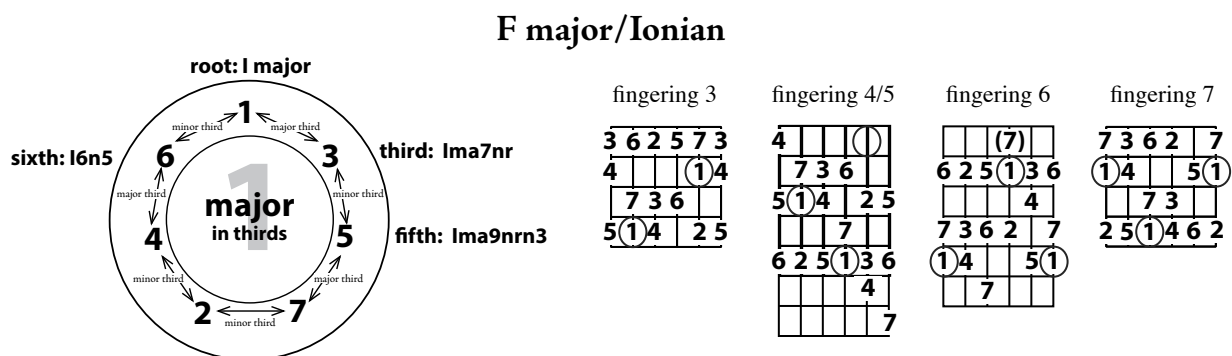

For each of the seven fingerings below play through the list of triads and their function. Start with F major, but then do it later in a variety of keys.

triads on each scale tone, in numbers and letters

F major. Play all the 1-3-5's ascending in order of pitch, then play then think them as F-A-C, for the key of F.
G minor. Play all the 2-4-6's ascending in order of pitch, then play then think them as G-Bb-D, for the key of F.
A minor. Play all the 3-5-7's ascending in order of pitch, then play then think them as A-C-E, for the key of F.
Bb major. Play all the 4-6-1's ascending in order of pitch, then play then think them as Bb-D-F, for the key of F.
C major. Play all the 5-7-2's ascending in order of pitch, then play then think them as C-E-G, for the key of F.
D minor. Play all the 6-1-3's ascending in order of pitch, then play then think them as D-F-A, for the key of F.
E diminished. Play all the 7-2-4's ascending in order of pitch, then play then think them as E-G-Bb, for the key of F.

I major (of the key of F) secondary root triads, in numbers and letters

F major. Play all the 1-3-5's ascending in order of pitch, then play then think them as F-A-C and as F major triad, for the key of F.

A minor. Play all the 3-5-7's ascending in order of pitch, then play then think them as A-C-E and as Fma7, no root (Ima7nr), for the key of F.

C major. Play all the 5-7-2's ascending in order of pitch, then play then think them as C-E-G and as Fma9 no root, no third (Fma9nrn3), for the key of F.

D minor. Play all the 6-1-3's ascending in order of pitch, then play then think them as D-F-A and as F6, no fifth (IIm6n5), for the key of F.

II minor (of the key of F) secondary root triads, in numbers and letters

G minor/G Dorian

G minor. Play all the 2-4-6's ascending in order of pitch, then play then think them as G-Bb-D and as G minor (II minor) triad, for the key of F.

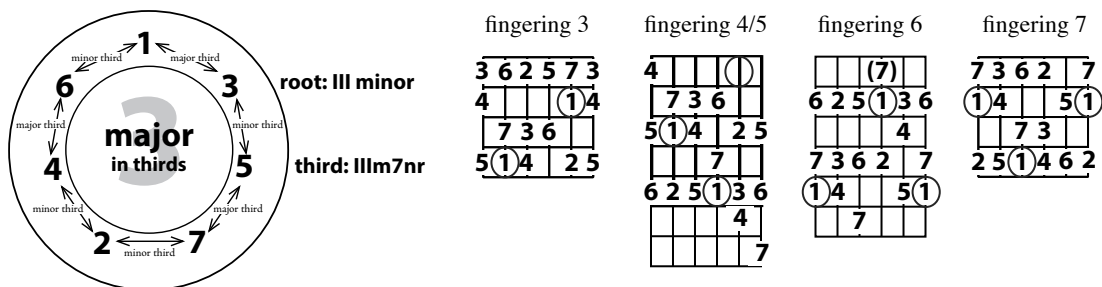

Bb major. Play all the 4-6-1's ascending in order of pitch, then play then think them as Bb-D-F and as Gm7, no root (IIIm7nr), for the key of F.

D minor. Play all the 6-1-3's ascending in order of pitch, then play then think them as D-F-A and as Gm9, no root, no third (IIIm9nrn3), for the key of F.

E diminished. Play all the 7-2-4's (E diminished) ascending in order of pitch, then play then think them as E-G-Bb and as Gm6, no fifth (IIIm6n5), for the key of F.

III minor (of the key of F) secondary root triads, in numbers and letters

A minor/A Phrygian

A minor. Play all the 3-5-7's ascending in order of pitch, then play then think them as A-C-E and as A minor (III minor) triad, for the key of F.

C major. Play all the 5-7-2's ascending in order of pitch, then play then think them as C-E-G and as Am7, no root (IIIIm7nr), for the key of F.

IV major (of the key of F) secondary root triads, in numbers and letters

Bb Major/Bb Lydian

Bb major. Play all the 4-6-1's ascending in order of pitch, then play then think them as Bb-D-F and as Bb major (IV major) triad, for the key of F.

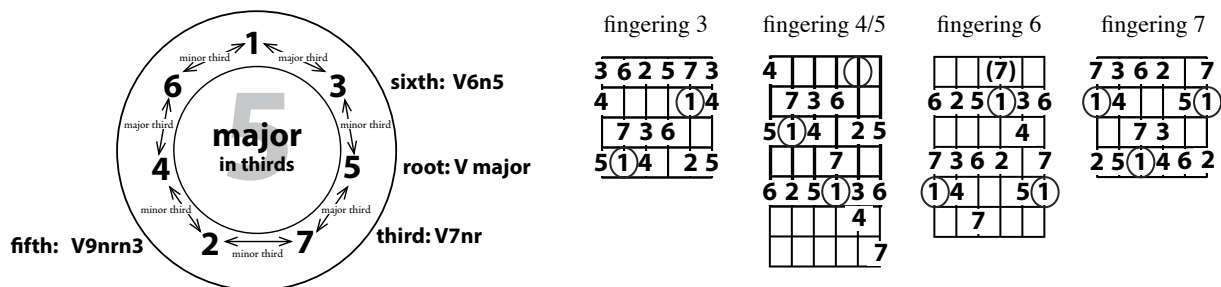

D minor. Play all the 6-1-3's ascending in order of pitch, then play then think them as D-F-A and as Bbma7, no root (IVma7nr), for the key of F.

F major. Play all the 1-3-5's ascending in order of pitch, then play then think them as F-A-C and as Bbma9, no root, no third (IVma9nrn3), for the key of F.

G minor. Play all the 2-4-6's ascending in order of pitch, then play then think them as G-Bb-D and as Bb6, no fifth (IV6n5), for the key of F.

V major (of the key of F) secondary root triads, in numbers and letters

C Major/C Mixolydian

C major. Play all the 5-7-2's ascending in order of pitch, then play then think them as C-E-G and as C major (V major) triad, for the key of F.

E diminished. Play all the 7-2-4's ascending in order of pitch, then play then think them as E-G-Bb and as C7, no root (V7nr), for the key of F.

G minor. Play all the 2-4-6's ascending in order of pitch, then play then think them as G-Bb-D and as C9, no root, no third (V9nrn3), for the key of F.

A minor. Play all the 3-5-7's ascending in order of pitch, then play then think them as A-C-E and as C6, no fifth (V6n5), for the key of F.

VI minor (of the key of F) secondary root triads, in numbers and letters

D minor/D Aeolian

D minor. Play all the 6-1-3's ascending in order of pitch, then play then think them as D-F-A and as D minor (VI minor) triad, for the key of F.

F major. Play all the 1-3-5's ascending in order of pitch, then play then think them as F-A-C and as Dm7, no root (VIm7nr), for the key of F.

A minor. Play all the 3-5-7's ascending in order of pitch, then play then think them as A-C-E and as Dm9, no root, no third (VIm9nrn3), for the key of F.

VII diminished (of the key of F) secondary root triads, in numbers and letters

E diminished/E Locrian

E diminished. Play all the 7-2-4's ascending in order of pitch, then play then think them as E-G-Bb and as E diminished (VII diminished) triad, for the key of F.

G minor. Play all the 2-4-6's ascending in order of pitch, then play then think them as G-Bb-D and as Em7b5, no root (VIm7nr), for the key of F.

F major triads in root position, on string set 3-2-1. nr= no root, n3 = no third, n5= no fifth.

Consider Major Scale Tone Triads Over Each Scale Tone

The chords in gray boxes can be emphasized and featured with the repeating pedal bass tone shown in the left column. In slash chords by number, such as IIm7/b7 the numbered tone after the slash is *in the key of the chord root*. With IIm7/b7, the “b7” is in the key of II. Am7/b7 has “G” in the bass, which is b7 in the key of A. “nr” means no root, “n3” means no third, “n5” means no fifth.

Combining Major, Harmonic Minor and Melodic Minor Triads

Major and harmonic minor scale-tone triads are frequently combined in the same chord progression.

III major or III7 chords progressing to VI harmonic minor

The III chord in a major key is commonly changed from III minor or III^m7 to III major or III⁷, making the III or III⁷ a secondary dominant to progress to the VI^m chord it typically precedes. VI harmonic minor scale is typically used during the III or III⁷ chord (also called III Phrygian dominant). The triads in such a case are modified by sharpening the fifth of the original parent major scale, which makes VI harmonic minor.

VI major or VI7 chords progressing to II melodic minor

The VI chord in a major key is commonly changed from VI minor or VI^m7 to VI major or VI⁷, making the VI or VI⁷ a secondary dominant to progress to the II^m chord it typically precedes. II harmonic minor scale is typically used during the VI or VI⁷ chord (also called VI Phrygian dominant). The triads in such a case are modified by sharpening the tone center ("sharp one") of the original parent major scale, which makes II melodic minor.

F major scale-tone triads, positions I-III

this is the parent scale for D harmonic minor and G melodic minor

D harmonic minor scale-tone triads, positions I-III

All of the "C" notes, the fifth of F major have been sharpened. The roman numeral names are based on the parent major scale, F major.

G melodic minor scale-tone triads, positions I-III

All of the “F” notes, the tone center (“1”) of F major have been sharpened. The roman numeral names are based on the parent major scale, F major.

Identifying the Changed Scale when You Alter a Note

Sharpening the five of a major scale changes the scale to major sharp five, which is has the same notes as VI harmonic minor. It changes three of the major scale tone triads. V major becomes V diminished. III minor becomes, III major. I major becomes I augmented.

Sharpening the one of a major scale (the tone center, “C” of a C major scale_ changes the scale to major sharp oone, which is has the same notes as II melodic minor. It changes three of the major scale tone triads. I major becomes #I diminished. VI minor becomes, VI major. IV major becomes IV augmented.

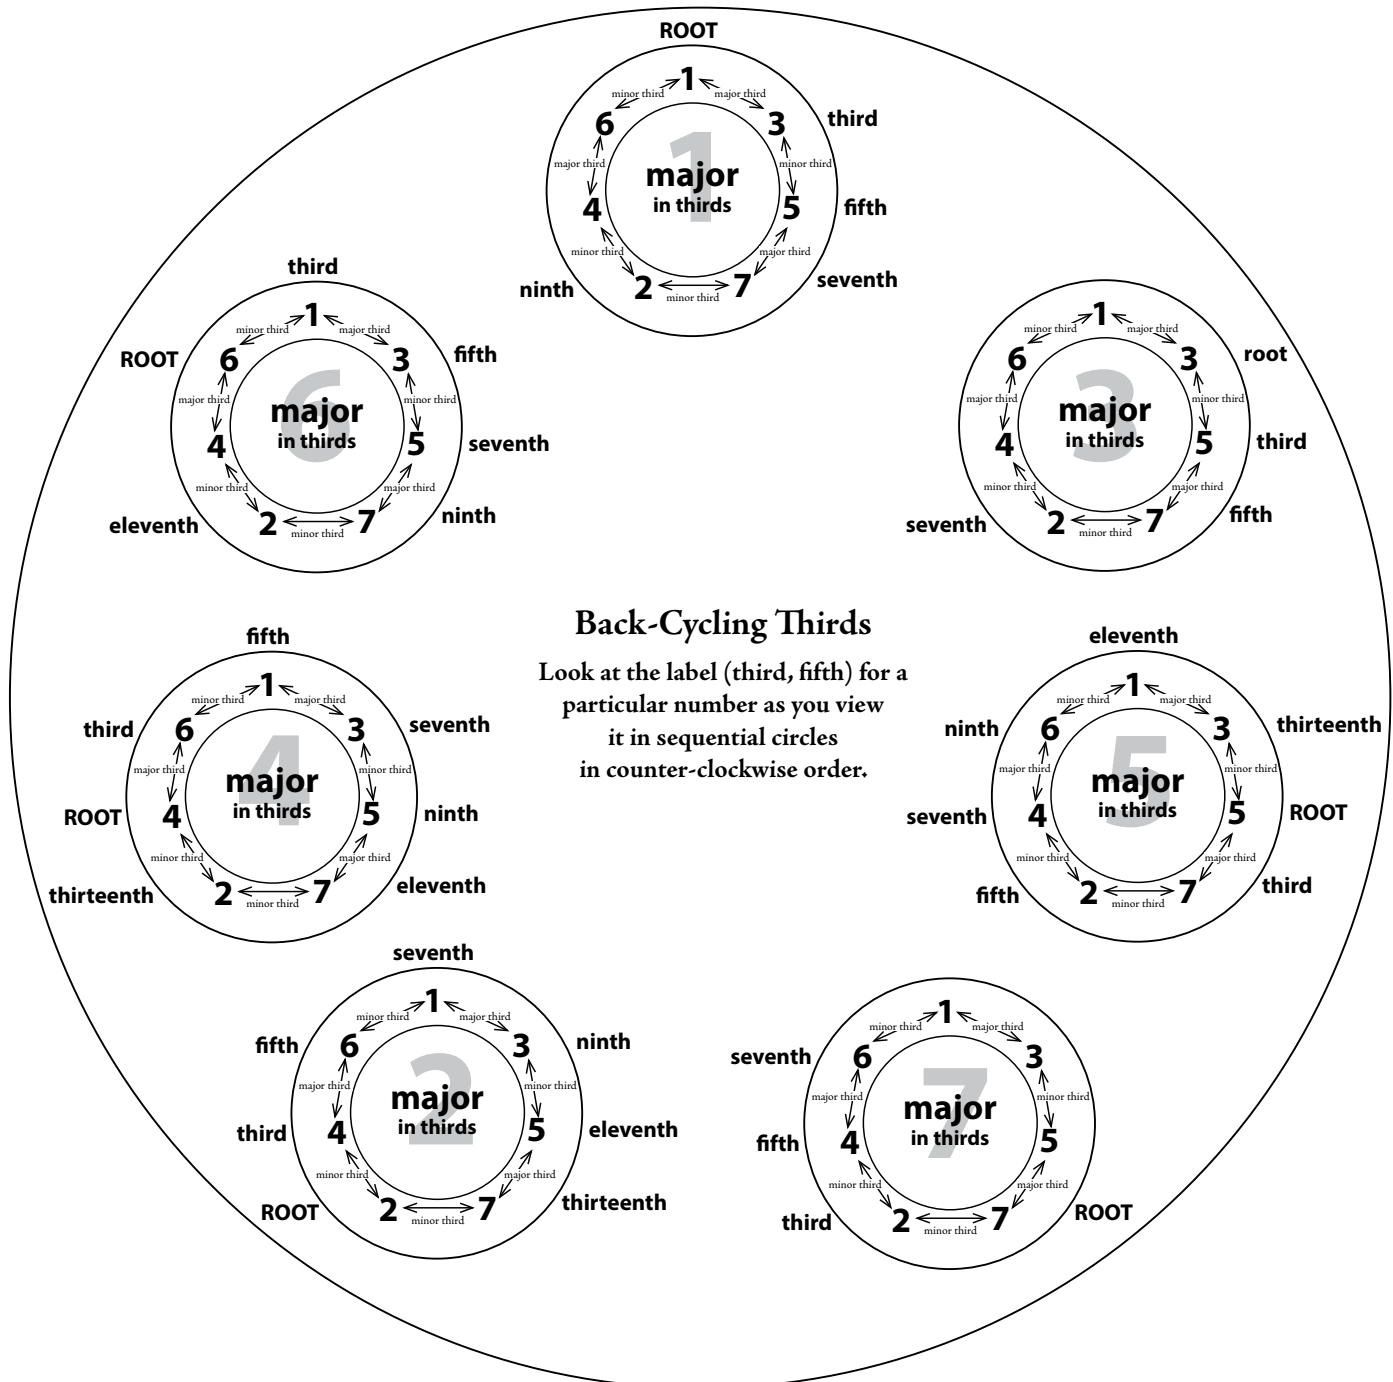

You can comprehend these changes to include other similar changes like flatting the third or sixth of a major scale with *back-cycling thirds*. With back cycling thirds, you can identify the role of a changed note to understand on which triad the changed note sharps the root, on which triad the changed note raises the third and on which triad the changed note raises the fifth. See [Finding the Harmonic Roles of a Particular Scale Tone](#) below. Once you identify the changed chords, you can concieve them in the changed scale, following through by looking at back-cycling thirds in the new scale.

Finding the Harmonic Roles of a Particular Scale Tone

To voice lead melodic tones on a chord progression, you need to recognize when a tone is in a chord and which chord tone it is (root, fifth, etc.). Learn to do this by “back-cycling thirds”, shown below.

back-cycling thirds in the major scale

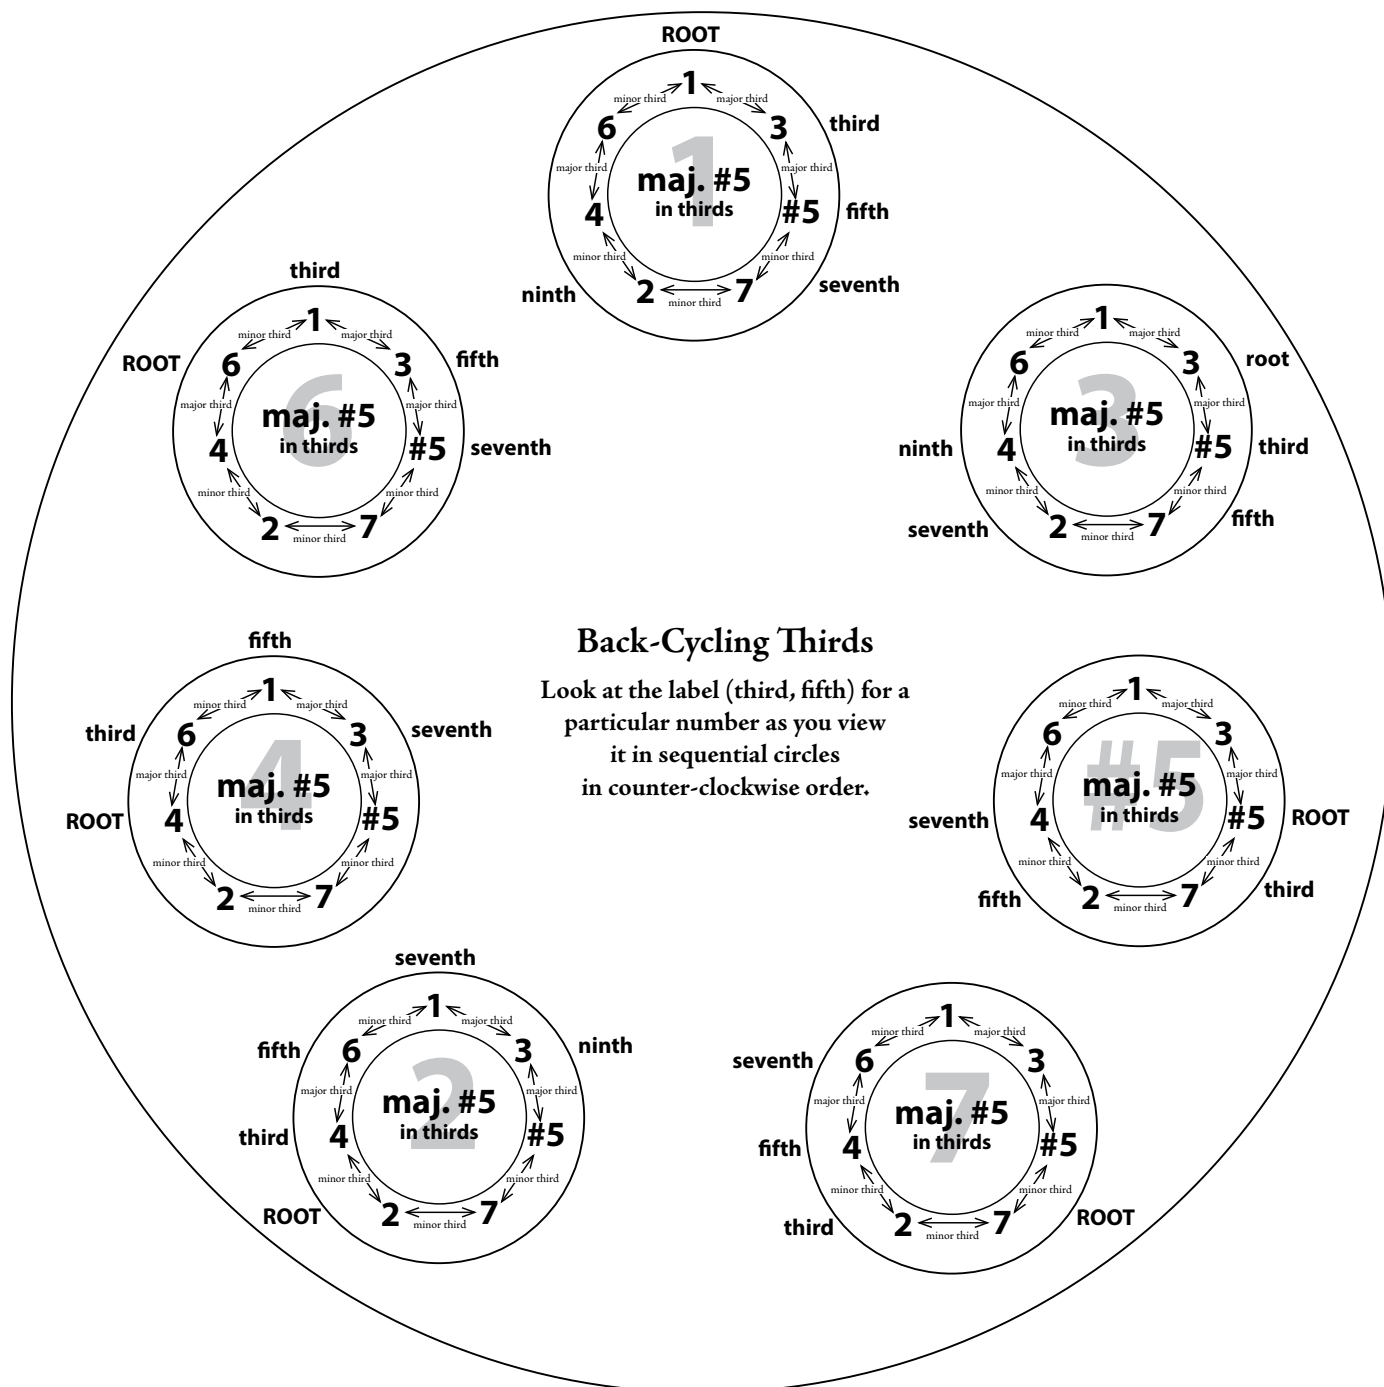

triad..... I major II minor..... III minor IV major V major..... VI minor VII dimin.
 seventh chord Ima7 IIIm7..... IIIIm7 IVma7..... V7..... VIIm7 VIIIm7b5
 ninth chord Ima9 IIIm9..... no chord IVma9..... V9..... VIIm9..... no chord

back-cycling thirds in the major sharp five and harmonic minor scale

Harmonic minor is a mode of major sharp five scale as you can see in this table:

mode names	major #5	Dorian #4	Phryg. dom.	Lydian #2	Mixo. #1	Aeolian nat.7	Locrian nat.6
major #5 scale tones	I	II	III	IV	#V	VI	VII

Psychedelic Hard Rock Use of bVII, bIII, and bVI Over I

These progressions can draw from roots on the notes of IV minor pentatonic, not to imply playing in the key of IV, but a device to determine the available notes. Examples include Got A Line On You by Spirit, Runnin' with the Devil and Unchained by Van Halen, I Can See for Miles by the Who, the Green Manalishi by Fleetwood Mac, Angel (intro) by Jimi Hendrix

Chord progressions with bIII, bVI and bVII also draw from multi-plagal chord progression. IV-I is a plagal cadence. bVII-IV-I is a double-plagal cadence. bIII-bVII-IV-I is a triple-plagal cadence and bVI-bIII-bVII-IV-I is a quadruple plagal cadence.

	triad (lettered examples are shown in the key of C)		
BASS	bVII major	bIII major	bVI major
1	bVII/C	bIII/C	bVI/C
	Bb/C	Eb/C	Ab/C
	I9sus4n5	Im7	
	C9sus4n5	Cm7	

Triad Neighbors and Roots Up or Down a Fourth

Combine any triad with upper and lower neighbors and with chords with roots up or down a fourth in the chord progression.

establishing the primary chord

Establish the primary chord by stronger emphasis of it and its root with any of the devices listed below. The key the the primary chord root is usually established with more than one device. Each device draws attention to the desired tone center (root of the primary chord). See the chapter [Establishing a Key](#). The devices that can establish a key include:

- ✦ **Using a tonic scale.** Making melody with a scale named after the tone center
- ✦ **Play it louder.** Playing the tone center louder or more often than other notes
- ✦ **Sustain it.** Sustaining the tone center or ending a phrase with it
- ✦ **Pivot tone.** Using the tone center as a pivot tone, where the melody alternates between it and other notes (see [Melodic Cells/Pivot Tone](#))
- ✦ **Establish a tonic chord.** Establishing the tone center by establishing the tonic chord in these ways (see [Establishing the Key With Chord Progression and Cadences](#) and [Modes](#)) :
 - ✦ **Starting with the desired key chord**

- ✦ **Ending with** the desired key chord
- ✦ **More frequent occurrence** of the tonic chord
- ✦ Using the tone center as a **pedal point**, which is a sustained note, usually in the bass (see [Pedal Point Chord Progression](#))
- ✦ **Resolving to the tonic chord with a cadence** (a well-known chord progression used to lead to a tonic chord). See [Secondary Dominant](#).
- ✦ **Scalar chord root movement.** A progression of chord roots up or down a scale to the root of the intended tonic chord.
- ✦ **Dissonance.** Preceding the intended tonic chord by one or more dissonant, tension-producing chords.
- ✦ **Low-pitched tonic root.** Use the root of the main chord in a low range of pitch.
- ✦ **Define a section with it.** Ending or beginning a section with a chord, where sections are typically multiples of four measures. Ending with the desired tonic chord establishes stronger tonality than beginning with it.

primary triad on the root

Combine the primary triad with neighbors on a root up a step, down a step, up a fourth or down a fourth. Emphasize the primary chord with the devices shown above (see [establishing the primary chord](#)) and de-emphasize the chords on roots up or down a step or a fourth.

triads as secondary roots

As many as four triads can be used to represent a larger chord. Ninth chords contain three triads, one on the root, third and fifth. Seventh chords contain two triads, one on the root and one on the fifth. Sixth chords contain two triads, one on the root and one on the fifth.

secondary root triad on the third

For any triad, a secondary root triad can be treated as a primary chord, building an upper harmony of the triad on the third of the triad (build Em on a C triad or Am on an F triad). This treats the triad as if it were a seventh chord on the same root, but without the root. See the chapter [Substitution](#)/Categories of Substitute Chords/1. Shared Thirds: Secondary Roots.

secondary root triad on the sixth

For any triad that can be a sixth chord in the scale it was constructed from, including I, IV, V and IIm chords with major scales, a secondary root triad can be treated as a primary chord of a sixth quality, building a harmony of the triad from the sixth. This treats the triad as if it were a seventh chord built

on the sixth of the key from which the triad was built, but without the root. See the chapter [Substitution/](#)Categories of Substitute Chords/1. Shared Thirds: Secondary Roots.

secondary root triads for major scale tone chords

Lettered examples below are shown in the key of C.

	I major (C major) acts as chord shown below	II minor (D minor) acts as chord shown below	III minor (E minor) acts as chord shown below	IV major (F major) acts as chord shown below	V major (G major) acts as chord shown below	VI minor (A minor) acts as chord shown below	VII diminished (B diminished) acts as chord shown below

NEIGHBOR TONE TRIADS

The Procedure of Finding Neighbor Tone Triads

Play major scale tone triads horizontally on a stringset like 4-3-2 or 3-2-1.

- ✦ First, name the triads with their original names.
- ✦ Chose a triad to feature as a target that will represent the chord you are playing on in a chord progression. Be aware of the step of a major scale or other seven tone scale on which that chord occurs. For example, C major as a V chord in the F major scale.
- ✦ Become aware of the harmonic elaborations that triad. C major could be elaborated to C7, C9, or C6. See the chapter [“All Scale Tone Chords”](#). Start studying the first five sections and acquire enough of knowledge to understand the table of triads, sevenths and ninths on the bottom of the first page of the “All Major Scale Tone Chords” section.

Eventually, you should work your way through the chapter to the last four sections (All Major Scale Tone Chords, All Harmonic Minor Scale Tone Chords, All Melodic Minor Scale Tone Chords, and All Harmonic Major Scale Tone Chords).

- ✦ Learn the mode name for your chosen chord. For the mode names, see the [“Modes”](#) chapter and go to the section “Modes of Four Heptatonic Scales”. C major on step V of an F major scale is C Mixolydian and can be elaborated to C7, C9, C13 or C6.
- ✦ In relation to your target triad (C major triad as V of an F major scale in C Mixolydian), play the triads with roots up a step, down a step, up a fourth and down a fourth. For C major triad in an F major scale, D minor is on the root up a step, Bb major is on the root down a step, F major triad is on a root up a fourth and G minor is on the root down a fourth. It helps to learn back-cycling in fourths to determine the root down a fourth, See the chapter [“Backcycling”](#) and go to the section Back Cycling with Major Scale Tone Fourths.
- ✦ Do the entire set of neighbor tone triads with the target chord in root position, then the first inversion (third in the bass), then second inversion (fifth in the bass).
- ✦ Do the entire set of neighbor tone triad for secondary root on the third. See the chapter [“Substitution”](#) and go to the section “Shared Thirds: Secondary Roots”. If the chord can be a sixth chord (or m6), do it on the sixth. If the chord can be a ninth, also do the neighbor tone triads (roots up and down a step, roots up and down a fourth) on the fifth.

Common Tones Between Target Triads and Neighbor Tone Triads

A target triad has no common notes with the upper and lower stepwise root triads. As the V chord of the F major parent scale, the C major triad has no tones in common with D minor nor Bb major triads.

The lower stepwise root triad and upper root triad have two common notes with one another. For the C target chord in the F major scale, the C major triad has its root “C” in common with the F triad (root up a fourth) and has the “G” note in common with the G minor triad (root down a fourth).

The triads with their roots up and down a fourth from the target triad (F and Gm for the C target triad) share no notes with one another.

Modal Neighbor Tone Triads

In this song example, modal theme and variation is demonstrated on the basis of a I-VIm-IIIm-V chord progression in the key of F. First there are four twenty-bar sections, one in each of four modes in F major: F major (I), D Aeolian (VIm), G Dorian (IIIm) and C Mixolydian (V).

In each mode, upper and lower neighbor root triads are used in the first eight bars, triads with their root up and down a fourth for the next eight bars, followed by four-bar “six-nine” progression that features the triad on the sixth of the mode (Dm/F for F Ionian) and a ninth no root, no third on the fifth of the mode (C/F for F Ionian).

After the four twenty bar sections in the four modes, summary section plays four bars in each of the four modes, in the order I-VIm-IIIm-V, followed by two bars of the Mixolydian “six-nine” progression. Finally, there’s a four-bar ending in F Ionian.

theme and variation

In each of the four twenty-bar modal sections (F Ionian, D Aeolian, G Dorian and C Mixolydian) the accompaniment and melody is relatively the same. All of the comping and melody notes in the F Ionian section were descended two scale tones to form the D Aeolian section. All of the melody and notes of the F Ionian section were ascended one scale tone for the G Dorian section and down four scale tones for the C Mixolydian section.

Many of the chords were inverted to make them easier to fret, most commonly voiced on string set 4-3-2.

modes and parent scales

target	key mode	parent scale	chord scale	upper step	lower step	up fourth	lower fourth
G7	G Mixolydian	C major	G Mixolydian	Am	F	C	Dm
C7	G Dorian	F major	C Mixolydian	Dm	Bb	F	Gm
D7	G major	G major	D Mixolydian	Em	C	G	Am
C#dim7	G Dorian #4	F major #5	C Mixolydian #1	Dm	Bb	Faug.	Gm
E7 no root = G#dim.	G Mixolydian #1	C major #5	E Phrygian dom.	G#dim	F	Caug.	Dm`
Am7	G major	G major	A Dorian	Bm	G	D	Em

VI (E) Phrygian dominant. In bar eight, we're going to give the impression that bar nine (Am7) will be A harmonic minor (it will actually be A Dorian). We'll use a secondary root by using E7 no root = G# diminished triad. To do this, we'll use E Phrygian dominant for VI (E7) in G major, which comes from a C major scale with a sharp five. VI (E) Phrygian dominant = II (Am) harmonic minor (which will become II Dorian when you get to the IIm chord) .

#IV Mixolydian sharp one (bar seven is C#dim7 which is C7 with a sharp root).

Thinking in key scale by playing I (G) Mixolydian on the I chord (G) and I (G) Dorian on the IV chord (C7). Play upper and lower root neighbor triads and upper and lower fourth root triads as in the example that follows. Note that all of the chords are exactly the same for Mixolydian and Dorian with these progressions, except G major triad changes to G minor triad.

SIX NINE: VI_m-V_m TRIADS WITH PEDAL POINT ONE

Six Nine: VI_m-V_m over One

This becomes a sixth to ninth chord change, since VI_m equals I6 no fifth and V_m equals I9 no root, no third. During a C7 chord, the two chord progression C6_n5 to C9_{nrn}3 can be represented by playing Am-Gm.

C6_n5 and C9_{nrn}3 are respectively synonyms for Am and Gm.

Don't voice the note that is the ninth of the I9_{nrn}3 too low. The voicing for the second chord in the example below doesn't do a good job of sounding a ninth chord.

Close-Voiced Six Nine Blues in G

Sheet music for "Close-Voiced Six Nine Blues in G" in 4/4 time. The music is written for guitar, showing a treble clef staff with a key signature of one sharp (F#) and a bass clef staff with a key signature of one sharp (F#). The music is divided into three systems, each with a treble staff and a bass staff. The bass staff includes a TAB (Tuning) line and a B (Bass) line. The chords are indicated above the treble staff.

System 1:

- Chords: G⁷, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹, G⁷, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹.
- TAB: 10 10, 7 9, 5 7, 8 9, 6 7, 9 7, 10 8, 12 10, 10 10, 7 9, 5 7, 8 9, 6 7, 9 7, 10 8, 12 10.

System 2:

- Chords: C⁷, C⁶, C⁹, C⁶, C⁹, C⁶, C⁹, C⁶, C⁹, G⁷, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹.
- TAB: 8 8, 5 5, 3 3, 5 7, 3 5, 5 7, 3 5, 7 5, 8 6, 10 10, 7 9, 5 7, 8 9, 6 7, 9 7, 10 8, 12 10.

System 3:

- Chords: D⁷, D⁶, D⁹, D⁶, D⁹, D⁶, D⁹, D⁶, D⁹, G⁷, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹, G⁶, G⁹.
- TAB: 10 10, 10 12, 8 11, 12 10, 12 11, 10 12, 10 12, 11 10, 12 10, 14 12, 12 14, 12 14, 7 8, 5 7, 8 9, 6 7, 9 7, 10 8, 12 10.

Six Nine Blues #1 in G

Harmonic Major Scale Tone Triads on Strings 6-5-4

on strings 6-5-4, the fingerings would be relatively the same as on strings 5-4-3

MODAL TRIAD IMPROV AND CLUSTER PLAYING

The Power of Triads

Triads can be extremely useful in improvising both melody and accompaniment parts. You need to intimately know the graphic structures on the fretboard and how to intuitively use them. You can learn to use them in more complex relationships like a composer and arranger, but to do so you must have a thorough understanding of the theory *and* be able to think [theory summaries](#).

Here are a couple of examples of theory summaries:

If you have a good theoretical knowledge of blues improv, you know that you should generally flat the third of the key when making melody on a IV7 chord, since it is constructed with 4-6-1-b3 of the key.

In improvising on a jazz blues, during the later part of IV7 before I7 (F7 before C7), IV (F) Mixolydian sharp one (F#) creates V harmonic minor and suggests the Vm part of the I7 chord. See [Melodically Superimposed Cadences/Harmonic Minor Cadences](#).

Learning Linear Triads by String Set

do it yourself

Learn to construct the linear sets of triads yourself. Don't just learn by rote. Use the sets of fingerings in this course as a confirmation, but learn to conceive and build the sets yourself.

learn to build triad arcs

In [Scale Tone Arpeggios And Pentatonics/Building Triad Arcs](#), you can go through a set of the seven major scale in-position fingerings and get an overview of the full-fretboard triad structure. Highly recommended.

string sets and triad inversions

For each inversion on each string set (4-3-2 or 3-2-1), build the library of triads for the heptatonic (seven-tone scale) you are using. For the major scale, you'll need major, minor and diminished. On the string you have chosen each step of the scale will represent the root of a chord. The three inversions are generically 1-3-5, 3-5-1 and 5-1-3 (by "generically", I mean the "3's" may be flat and the "5's" may be flat or sharp).

range of positions and choosing a string for the roots

“Position” can refer to a area of the fretboard in relation to the index finger in single-note playing of scales or arpeggios. Generally, the number of the fret at which the first finger is hovering is the number of the position.

Start by playing sets of triads in stepwise order from about positions III to XV. Choose a string on which to play the roots of the chords, starting in III position area. Play the chosen major scale on that string in single notes from the lowest fretted note up an octave (twelve frets). Determine the lowest pitch in that scale that can be part of a triad in the scale without an open string.

build a library of the chord types

During the course of playing triads on each step of the scale, you’ll need the types of triads that occur in that scale. In major scale, for example, you’ll major, minor and diminished. Make a version of those on the first scale tone you have chosen on the second string to build a library of types.

Choosing the second string for an F major scale, the note “D” on the third fret is the sixth step of the scale. During the course of playing the F major scale tone triads on string set 432 in ascending order, you will need major, minor and diminished triads. Build one of each type on the note “D”, so you’ll know the fingerings for those types as you construct the set of triad fingerings.

tracking the scale

Think the location of each scale tone as you ascend the chosen string in alphabetical order, building a triad on each step named after the note. Think the roots by scale-tone number with the appropriate quality. I, IV and V are major. II, III and VI are minor. VII is diminished. Keep your focus on the scale numbers, which I call “tracking the scale. Here are a couple of examples:

C major scale, root on third string: Am has its root on second fret and is in first position (without open strings) and is a VIIm chord.

D major scale, root on second string: C# is on the second string, and would be scale tone seven. Play the three types of C# chords, major minor and diminished. The major and minor can be played without and open string, but C# diminished would require the third string open. So, start with the next higher scale tone “D”, which can be played in second position.

learn all three inversions

Learn all three inversions in one key before going to another. Build your memories of graphic sequences and fingerings first, before explicit memory of the chord names. Then you'll be able to improvise with the chords in a range of a few frets without having to know their names.

In a small range of frets, combine the fingerings. For example, in F, from fifth to tenth position, string set 4-3-2, play triads with roots on each string in ascending order:

fourth string roots 3-4-5

(circled roots)

generic order of voices 1-3-5

third string roots 5-6-7-1

(circled roots)

generic order of voices 5-1-3

second string roots 1-2-3

(circled roots)

generic order of voices 3-5-1

multiple scales for the same progression

In many American music styles like blues, multiple parent scales are necessary. See [Modes/Modes Of I-IV-V Blues](#) and [Modes on Jazz Blues](#). In the same chord progression, a C7 chord may use the F major parent scale for melody and accompaniment parts, while a F7 chord may use a Bb major scale. You would need to know the sets of triads for both scales to improvise effectively. You often will have to deal with many major scales (or other seven tone scales). You also will have to learn to think of all these scales in terms of the note named after the key, which is modal. Though this is learnable, it is so complicated that at first you should learn the sets of triads (or other scale tone structures) and use them with aural intuition before detailed analysis.

Using Pedal Point Conceptually

While improvising over any chord, you can conceive a pedal point with the root of that chord or with its [secondary roots](#). In improvisational music, there can be many versions of the current chord. A dominant seventh chord, such as C7, could be depicted as C (major triad) C7, C9, C13, C7/6 or C6. This can be done in chords, arpeggios or single note melody that is based on the chords and arpeggios.

duality chords

Duality tones are discussed in [Tonal Themes And Schemes](#). They are notes common to both the current chord and a key scale (a scale named after the current key). *Duality chords* are an even closer relationship. They are notes common to the current chord and some version of the tonic chord. They always involve chord synonyms, two or more chords that have different names but the same notes, like Am7 and C6.

aural improv with duality chords

As you improvise aurally (by ear) using a key scale that contains all the notes of the current chord, you will find some triads or thirds (two note chords that are major or minor third intervals) that sound consonant with the current chord, making some apparent version of it. It doesn't matter so much what the name is, just that it sounds good. So, you don't need to burden your mind and distract yourself from your expression and creativity. You can name the chords later, or not. Like Duke Ellington said "if it sounds good, it is good."

I remember a Miles Davis quote that went something like "there are no wrong notes in jazz". What did he mean? That you can indiscriminately play any note at any time? Not exactly. He meant that any "unintended" note can be molded into good thematic material and then repeated with theme and variation to validate it.

My friend says his wife, who is a film director, asks anyone to scribble anything on a piece of paper, they she draws around it to make something beautiful and meaningful. Steve Allen used to have a regular segment in his late night variety show where he asked five (I can't remember) audience members to each come up and choose a note near the center of the piano. He would then immediately compose a song around the sequence of notes! I thought that was really cool. He was obviously an accomplished pianist. Wikipedia, for what its worth, says he wrote over 14,000 songs.

When you find a note, a third or triad that sounds well over the current chord, emphasize it by repeating it, sustaining it, accenting it or otherwise drawing attention to it. It is some kind of duality chord that you can name later (or not).

When you come across a note, a third or a triad that doesn't seem to be part of the current chord, don't emphasize it. Major scale tone I, IIIm, IV or V type chords each have four strong triad subsets. They can each be a ninth chord, so they have a triad subset on their root third or fifth. Ima9, for example is

made up of tones 1-3-5-7 and 9(2). The 1-3-5 part is a I major triad. The 3-5-7 part is a III minor triad. The 5-7-2 part is a V major triad.

I, II^m IV and V each also have a sixth in their mode. In the key of D, the II minor chord in the key of C, for example, the sixth tone from “D” is “B”, its sixth. So it can be Dm⁶ (1-b3-5-6 of D), using all notes of the C major scale.

If you are playing on one of these chords that has many possible versions, it will have many triad subsets. So, you can emphasize many different triads based on its parent scale.

Since chords are typically built with every other note of a scale, roots of triads that are not part of the current chord are usually one scale step away from triads that are part of the current chord. Let’s say you are playing on Cma⁹ in the key of “C”, which consists of 1-3-5-7-2 of the C major scale. You play the notes of Dm, which is 2-4-6. The “4” in that chord creates a soft dissonance against the Cma⁹. By going one step up the scale, the root (“E”, 3 of C) of the Em triad is part of the Cma⁹. Em is 3-5-7 and Cma⁹ is 1-3-5-7-2. If go one step down the scale from the root “D” of Dm to the root “C” of C major triad, obviously that is part of Cma⁹, also. So....if you are playing on big chord like a ninth that can have a sixth, the root of any dissonant triad is likely one scale step away, up or down, from a consonant one that you can emphasize.

Small Structures Connect to Larger Ones

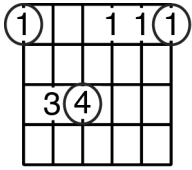

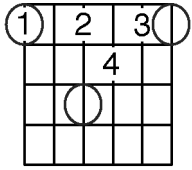

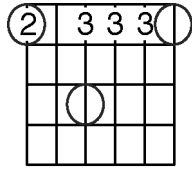

When you’re using pedal point thirds, one of the notes will often be an interval of a third or fourth that creates a triad when combined with the pedal point. When that happens, you can take the pivotal opportunity to use the triad to begin a pedal point triad series.

When pedal point triads are part of a seventh or larger chord, you can segue into an arpeggio structure representing the larger chord.

Chord Archetypes

- **The Chord Serial Number System**

THE CHORD SERIAL NUMBER SYSTEM

chord name	Cm	VIII	C7	VIII	Cm7	VIII
chord fingering						
	1 5 1 b3 5 1		1 b7 3 5		1 b7 b3 5	
serial number	151b351		10b7350		10b7b350	
serial number with fingers	151b351/134111		10b7350/102430		10b7b350/203330	

chord serial numbers

In the chord serial number system, the number 157300 represents chord tones in order from the sixth (largest) to first (smallest) string. Each number represents a major scale tone in the key of the chord root. The number “0” (zero) indicates that a string is not played. If a number is flatted or sharped, it indicates an altered major scale tone in the key of the chord root. The large circles on chord diagrams in this course show the location of the chord root (note after which the chord is named, such as the Bb root of a Bbma7 chord). When the large circle is empty, it shows the location of a chord root that is not played in the chord, as a point of reference.

The numbers 151b351 would represent the tones one, five, one, flat three, five, one, from the sixth string (largest) to the first string. In the key of “C”, these notes would be C-G-C-Eb-G-C. See the first diagram above.

The numbers 10b7350 would represent the tones one on the sixth string, no note on the fifth string, flat seven on the fourth string, three on the third string, five on the second string and no note on the first string. In the key of “C”, these notes would be C-(no note)-Bb-E-G-(no note). See the middle diagram above.

The serial number system applies to all fretted chords only, not open string chords. “1” represents the root, “3” the third, “5” the fifth and “7” the seventh of the chord. Zeros (“0”) represent a string that is not to be sounded.

chord serial numbers with finger numbers

The serial numbers can be appended with numbers for the fingers. In this case, the serial number is followed by a forward slash, then numbers to represent the fretting hand fingers in order from the sixth to first string. When a string is not fretted, a zero is shown. The first chord above would be 157300/142300 and the second chord would be 001357/004321. Notice that these are not hyphenated: “157300” indicates six numbers, which would be written with hyphens as “1-5-7-3-0-0”. “157300” does not indicate “one hundred fifty seven thousand, three hundred.

SEVENTH CHORDS WITH ROOT OR FIFTH IN THE BASS

memorize these archetypal major seventh chord fingerings

Notice that the first three fingerings have roots (labeled "1" below the string) in the bass, and the last three have fifths (labeled "5" below the string) in the bass.

Each pair of fingerings below are on the same string set. For example, the first two chords are fingered on strings 6, 4, 3 and 2. For each pair of chords, the first has the root in the bass and the second has the fifth in the bass.

creating five versions from each archetypal seventh chord fingering

Modify the first fingering in each row by accumulatively flattening the seventh, third, fifth. Then flat the seventh again (double-flatted), leaving the third and fifth flat. These modifications are shown progressively in each row, from left to right.

<p><i>major 7</i></p> <p>1 5 7 3</p>	<p><i>7</i></p> <p>1 5 b7 3</p>	<p><i>m7</i></p> <p>1 5 b7 b3</p>	<p><i>m7b5</i></p> <p>1 b5 b7 b3</p>	<p><i>diminished 7</i></p> <p>1 b5 6 b3</p>

4,320 VARIATIONS OF A TRIAD

Quadrad And Tertian Defined

A quadrad is a four-note chord. A tertian chord is constructed in thirds, by an every-other-note pattern in a seven-tone scale. A tertian quadrad is a four-note chord constructed in thirds. Tertian quadrads are commonly called seventh chords. Confusingly, the term seventh chord is also used as an abbreviation of the dominant seventh chord, with the numeric formula based on a major scale with the same letter name: 1, 3, 5, b7 (see Change Quality below). Sixth, minor sixth, major add nine and minor add nine are quadrads, but not tertian. They are add-tone chords.

Access To 3,888 Seventh Chord Fingerings

Most seventh chords can be derived by making the modifications described below to the 157300 and 135700 seventh chord fingerings. "Chord serial numbers" such as 157300 were defined earlier in [The Chord Serial Number System](#). There are:

1. 20 qualities
2. four options inverting the chord on the same string set (strings on which the chord is fretted)
3. three options (averaged) by changing string set
4. three options by inversion (raising the fifth or seventh an octave)
5. three options by omitting the root or fifth.

Primary Chord Archetypes

Two primary chord archetypes are shown here. Other versions on different strings could be used, but these show the basic of the structures well. Performing the five variations above to one of the primary chord archetypes below provides 2,160 chord fingerings. Applying the the variations to both of the primary chord archetypes below provides 4,320 chord fingerings. A third or half of them are practical to use, but this is a very efficient way to access them: get quick at following the construction path rather than just rote memorization.

major 7
serial number 157300

major 7
serial number 001357

Change Quality (20 options)

There are eighteen quadrad qualities in use. A chord root is the letter name after which a chord is named. The letter name expressing the chord root may be followed by a flat or sharp, showing that it is a half step above or below a natural letter name. Natural letter names are those with not sharp or flat. When a natural needed for clarity, the symbol “ \natural ” can be used to represent natural.

A chord formula is a numerical expression in relation to a major scale named after the chord root. The chord formula may require flats or sharps before numbers to show where chord tones are half steps (one-fret intervals) above or below chord tones.

Quadrad Formulas by Chord Family

<u>major</u>	<u>dominant</u>	<u>minor</u>	<u>diminished</u>
major 7 (ma7) = 1-3-5-7	7 (dominant seventh) = 1-3-5-b7	minor seventh = 1-b3-5-b7	diminished seventh (= m6b5) = 1-b3-5-bb7 (= 6)
ma7b5 = 1-3-b5-7	7b5 = 1-3-b5-b7		m7b5 = 1-b3-b5-b7
ma7#5 = 1-3-#5-7	7#5 = 1-3-#5-b7		
6 (ma6) = 1-3-5-6		m6 = 1-b3-5-6	
	7sus.4 = 1-4-5-b7	m(ma7) = 1-b3-5-7	
	7sus.2 = 1-2-5-b7		

Quadrad Formulas, Written Forms and Spoken Forms

<u>written</u>	<u>formula</u>	<u>spoken</u>	<u>other written forms</u>
ma7	1-3-5-7	major seventh	Δ, Δ7, maj7, M7
7	1-3-5-b7	dominant seventh	dom.7

m add 9	1-2-b3-5	minor, add nine	m/9

Find Chord Tones With Major Scale Fingerings

Use the seven in-position major scale fingerings shown below to find chord tones. The circled number should be placed on the note that names the chord root. The remaining numbers correspond to the chord formula.

If a formula designates a flatted note, move the location for that numbered tone one fret toward the head of the guitar. If a formula designates a sharped note, move the location for that numbered tone one fret toward the bridge of the guitar.

When a note is out of reach, it can be moved to the next larger or smaller string as necessary. Notes duplicate on adjacent strings four or five frets away (not counting the fret on which you begin). When a note becomes out of reach toward the head of the guitar, it can be moved up five frets toward the guitar body on the next larger string (four frets from the second to third string). When a note becomes out of reach toward the body of the guitar, it can be moved down five frets toward the head of the guitar on the next smaller string (four frets from the third to second string). These relationships can be seen on the full-fretboard diagram at the right.

For a more detailed description of chord construction, read the [Encyclopedia Of Chord Fingering](#).

In-Position Major Scale Fingerings

In playing a scale where there are duplicate notes on strings two and three, play either note (not both).

Three Note Per String Major Scale Fingerings

Begin With 157300 and 135700, Modify to Most Seventh Chord Fingerings

major 7
serial number 157300

major 7
serial number 001357

Inversions on the Same String Set (four options)

With inversions on the same string set, each chord tone is moved up the neck on the same string to the next higher chord tone. “1” moves up to “3”, “3” moves up to “5”, “5” moves up to “7” and “7” moves up to “1”. This can be illustrated by clockwise movement on this inversion cycle:

Examples of these inversions are shown below:

1573 primary chord

1573, fifth up an octave

1573, seventh up an octave

1357 primary chord

some of these are impractical to finger

1357, fifth up an octave

and next to highest note moved to next larger string

some of these are only usable in other qualities

Change String Set (two, three or four options)

It seems most organized to begin with the chord on the largest set of strings, then move each note in the chord to the next smaller string. Remember, when changing string set by moving all notes to the next smaller string, any note moving from the third string to the second string must relatively be moved up one fret.

In the set of chords below, the first chord has scale tones 1-5-7-3 respectively on strings 6-5-4-3. As the tones are moved to strings 5-4-3-2 in the next diagram, the note labeled “3” below the diagrams moves from the third to second string and must move relatively one fret higher than the other notes. This is due to the fact that notes repeat at five fret intervals between each pair of strings (not counting the fret on which you begin), *except* between the third and second string, where notes repeat at four fret intervals. This relationship is evident in the tuning method of comparing each string fretted at the fifth fret to the same note on the next smaller string open, *except* the third string is fretted at the fourth fret and compared to the second string open.

In the next set of chords below, the first chord has scale tones 1-3-7 respectively on strings 6-5-4. Moving the notes to strings 5-4-3 requires no change, since there is no issue regarding changing notes from the third to second string. As the tones are moved from strings 5-4-3 to strings 4-3-2 in the next diagram, the note labeled “7” below the diagrams moves from the third to second string and must move relatively one fret higher (closer to the guitar body) than the other notes. In the last two diagrams, the note labeled “3” moves from the third to second string relatively one fret higher (closer to the guitar body). This last move may look as if the notes labeled “1” and “7” have moved down a fret (toward the head of the guitar), which they are. It is *relatively* the same thing.

Invert (three options)

raise the fifth one octave

In the diagrams below, the fifth of the first chord has been moved up an octave in the second chord. The second chord can then be modified to all of the various qualities, inversions on the same string set and changing string sets.

raise the seventh one octave

In the diagrams below, the seventh of the first chord has been moved up an octave in the second chord. The second chord can then be modified to all of the various qualities, inversions on the same string set and changing string sets.

Omit the Root or the Fifth: Three Note Seventh Chords

omit the fifth

This is the original 157300 chord and its variation without a fifth.

The 107300 chord can be modified to many seventh chord types. This family (with 107300 and variations with altered "7" and "3") can be used where a chord with a b5 or #5 is specified, but where the altered fifth is not essential. The version below begins with an inversion of the original 157300 chord (above) on the second string set. Notice that each tone of the 513700 chord has moved up one chord tone (see the previous section: Inversion on the Same String Set).

Omit The Root

This is the original 157300 chord and its variation without a root.

Voice Leading

Voice leading is a designed movement for each of the notes in a chord to a designated note in the next chord. Conservative voice leading is usually best, where each note moves to the closest note in the next chord. If a note can remain in the next chord, it should. Notes that must change are routed to the closest note, spanning the smallest interval possible.

Conservative Voice Leading

With conservative voice leading for major scale-tone chord progression with roots ascending in fourths, the root and third of the current chord remain to become the fifth and seventh of the next chord, respectively. The fifth descends to become the root of the next chord. The seventh descends to become the third of the next chord. See [Voice Leading/Descend Five and Seven Voicings](#).

FINGERING FAMILIES OF SEVEN SEVENTH CHORD TYPES

Going down the column of four chords in each string set plays ascending inversions.

String Set 6-4-3-2 (drop 3 voicing)

	major 7	7 (dominant)	minor 7	minor 7b5	diminished 7	7#5	7b5

MEMORIZE FULL-FRETBOARD CHORD TONES

Visualize Fifths (roots and fifths)

By visualizing full-fretboard perfect fifths, you can choose any adjacent pair of notes (making a fourth or fifth) and add to them to create triads and seventh chords. If a chord has a $\sharp 3$ and $\sharp 7$, or $b3$ and $b7$, those notes are a perfect fifth from on another also, so they can be visualized as such.

By visualizing full-fretboard diminished fifths, you can choose any adjacent pair of notes (making a fourth or fifth) and add to them to create diminished triads and minor seventh flat five chords.

If a chord has a $\sharp 3$ and $b7$ (dominant seventh type chords), or $b3$ and $\sharp 7$ (minor major seventh chords), those notes are a diminished fifth from on another also, so they can be visualized as such.

Dominant seventh chords are easy to construct, since the interval from the third to the flatted seventh is the same when it is inverted. That is, the interval up or down from $\sharp 3$ to $b7$ is the same, and the interval up or down from $b7$ to $\sharp 3$ is the same.

Visualize Serial Intervals

Stacked major seconds. Six of them make $9b5\sharp 5$ = whole tone scale

Stacked minor thirds. Four of them make a diminished seventh chord

Stacked major thirds. Three of them make an augmented triad.

Stacked perfect fourths (each analyzed from lower pitch, up):

three notes: $7sus4n5$, $sus4$, $sus2$

four notes: $m7/11\sharp 5$, $7sus4$, $sus2/4$, $6sus2$

five notes: unusable chord, $m7/11$, instable root, instable root, $ma6/9$

Notice that the stacked perfect fifths shown below create the same lists of chords as the stacked perfect fourths in reverse order.

Stacked perfect fifths (each analyzed from lower pitch, up):

three notes: $sus2$, $sus4$, $7sus4n5$

four notes: $6sus2$, $sus2/4$, $7sus4$, $m7/11n5$

five notes: $ma6/9$, instable root, instable root, $m7/11$, unusable chord

START WITH THREE-NOTE SEVENTH AND SIXTH CHORDS

Before fingering and voicing four, five and six-note chords, play basic blues and jazz progressions as Freddy Green did with Count Basie, using three-note seventh chords. Learn the theory of construction later, but first just play some chord progressions. Learn the root in the bass versions first, then fifth in the bass. See the examples that follow.

Fingering Library

root in the bass (root position)

	major seventh	dominant 7	major 6	minor 7	m7b5	dim. 7	m6

CONSTRUCTING MAJOR SCALE-TONE SEVENTH CHORDS

the tertian cycle

The traditional method of building chords with the major scale is to use every-other note. Pairs of notes in this cycle such as 13, 24, 35, 46, 57, 61, are said to be an interval of a scale-tone third. The continuous cycle of thirds is called the *tertian cycle*. This makes use of the number cycle shown below:

tertian quadrads

Four notes in a row from this cycle, such as 1357, 2461, 3572, etc., form a major scale-tone seventh chord. Four note chords can be called *quadrads*. Four note chords specifically constructed in thirds (such as 1357) can be called *tertian quadrads*, but are more typically called *scale-tone seventh chords*. The term *seventh chord* is ambiguously used to refer to the family of seventh chords of various qualities. Major seventh, minor seventh, dominant seventh, etc., are collectively referred to as “seventh chords” also. Sad, but true.

major scale-tone seventh chords by roman numeral

Roman numerals (I, II, III, IV, etc.) are used to number the steps of a major scale one which chords are built. The letter name of a chord is a letter A through G, and may be followed by a sharp or flat, indicating its modification up or down a half step (one fret). To make a chord progression transposable (changable to other keys) and to compare it to other progressions, names are replaced with roman numerals. The description of the chord quality that followed the letter name remains the same. In the key of F (where Bb is the fourth step of the F major scale), Bbma7b5 would be written as IVma7b5.

major scale tone	1	2	3	4	5	6	7

second inversion (fifth in the bass) - 051073

Combine Root Position A Form (015037) and E Form (150370)

PERFECT FOURTH CADENCES

Harmonic cadences are devices to establish a chord as the expected ending chord, and therefore its root as the tone center. This can be established for the piece of music as a whole, and for secondary and temporary tone centers during the piece.

The oldest cadence in music history is “V to I”, where the chord on the fifth step of the key scale (called the **dominant**) leads to the chord on the first step of the key scale. This chord on the fifth of the scale of the intended tonic is commonly a dominant seventh type chord (or altered dominant seventh in jazz). When the intended tonic is not the first step of the parent major scale, the the seventh type chord on the fifth of the intended tonic is called a *secondary dominant*. See [Secondary Dominant](#).

In jazz, a [flat five substitute](#) chord replaces the chord on the fifth with one a flat fifth above or below the root of the chord on the fifth of the tonic. The note a flat fifth above or below any given note is the same note. The [flat five substitute](#) becomes a chord built on the upper chromatic neighbor to the tonic, on the root up a half step (one fret) from the root of the intended tonic chord.

The 7-3-6-2-5-1-4 Series of Perfect Fourths

This is the most common structural source for cadences. The major scale is the only scale whose notes can be ordered in a continuous series of seven perfect fourths.

Four-note scale-tone chords constructed in thirds can accurately be called *major scale-tone tertian quadrads*, but are commonly called *major scale-tone seventh chords*.

Major Scale-Tone Seventh Chords in Perfect Fourths, 3-Note Voicings

Recognizing II-V-I Cadences in Chord Progressions

Memorize letter names in perfect fourths. The sequence is B-E-A-D-G-C-F with every note flat, followed by B-E-A-D-G-C-F (all natural), then B-E-A-D-G-C-F with all notes sharp, as shown below.

the perfect fourth series

B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb

Any consecutive seven of the letters in the perfect fourth series constitutes the numbered tones “7-3-6-2-5-1-4” for a particular major scale. Notice that “1” is the next to last letter in the series, so the major scale for any seven consecutive letters would be the next to last letter (reading left to right).

“II-V-I” would be the fourth through sixth letters of any consecutive seven letters, where the sixth letter is “1”. Go through a jazz fake book and look for “II-V-I” occurring multiple times in the same piece. The “II-V-I’s” will often occur in many keys in the same song. Next, you’ll need to determine whether those “II-V-I’s” are major or minor.

Recognizing II-V-I cadences is a beginning. You’ll then look for longer sequences of fourths in the “7-3-6-2-5-1-4” order: VIIIm7b-IIIIm7 (usually III7)-VIm7-IIIm7-V7-Ima7-IVma7.

Major II-V-I Cadences

In major mode, “IIIm7-V7-Ima7” is a “II-V-I” cadence. IIIm7 may be IIIm9 or other versions of IIIm7 that include 2, 4 or 6 in the key of the chord root. V7 may be V9, or other versions that include 2, 4 or 6 in the key of the chord root. Ima7 may be Ima9, I6, or other versions that include 2 or 6.

Minor II-V-I Cadences

In minor mode, “IIIm7b5-V7-Im7” (Bm7b5-E7-Am7) is a “II-V-I” cadence. Their origin is VIIIm7b5-III7-VIm7 of the parent major scale (C major scale), where the key is established on VI minor. The chord roots are then re-numbered, so VIIIm7b5 becomes IIIm7b5 ((Bm7b5))=, III7 becomes V7 (E7) and VIm7 becomes Im7. The III7 chord (functioning as V7) may optionally have #5, b9 or #9.

II V I Cadences of Four Parent Scale Types

major scale	IIIm13	V13	Ima9
harmonic minor scale	IIIm7b5	V7b9b13	Im
melodic minor scale	IIIm7b5	V9b13	Im
harmonic major scale	IIIm13b9	V9b13	Ima9

other options:

melodic minor VIIb5#5b9#9 for the II chord, harmonic minor V and Im
V13b9#9#11 using half/whole diminished scale

IIm7-V7

The most common cadence in jazz is IIm7 to V7 in major mode. Here are some of the better fingerings for the key of G, where IIm7 is Am7 and V7 is D7.

10b7b350 and inversions, descend five and seven

Am7 V	D7 III	Am7 VII	D7 VII	Am7 X	D7 X	Am7 XIII	D7 XII

10b7b350 to 015b730 and inversions

Am7 V	D7 V	Am7 VII	D7 VII	Am7 X	D7 XI	Am7 I	D7 II

015b7b30 and inversions, descend five and seven

Am7 XII	D7 XI	Am7 II	D7 II	Am7 V	D7 V	Am7 IX	D7 VII

015b7b30 and 3015b70 and inversions

Am7 XII	D7 XII	Am7 II	D7 III	Am7 V	D7 VII	Am7 IX	D7 X

010b7b35 descend five and seven

Am7 XII	D7 X	Am7 II	D7 III	Am7 V	D7 V	Am7 VIII	D7 VII

IIm7b5-V7

The minor version of the II-V cadence is IIm7b5 to V7 (optional #5, b9, #9). Its origin is VIIIm7b5-III7 of its parent major scale. Here are some of the better fingerings for the key of G minor, where IIm7b5 is Am7b5 and V7 is D7.

10b7b350 and inversions, descend five and seven

10b7b350 to 015b730 and inversions

015b7b30 and inversions, descend five and seven

015b7b30 and 3015b70 and inversions

Major Scale-Tone Sevenths in Fourths, Descend Five and Seven

The remaining progressions this section are “Descend Five and Seven” voicings, where the root and the fifth of each chord are retained in the next chord, while the fifth and seventh of each chord descend one scale tone in the next chord. The following voice leading occurs:

- ✦ The root of each chord is retained and becomes the fifth of the next chord
- ✦ The third of each chord is retained and becomes the seventh of the next chord
- ✦ The fifth of each chord descends to become the root of the next chord
- ✦ The seventh of each chord descends to become the third of the next chord

See Voice Leading/[Descend Five and Seven](#).

Major Scale-Tone Sevenths in Fourths, Descend Five and Seven, Bass on Sixth String (five to seven-fret span)

alternating root & fifth in bass on sixth string - 107350 (drop 3) & 503710 (drop 3)

To see the families these chords use, start with the last chord in each row and play every other chord for four chords: IVma7, V7, VIIm7 and VIIIm7b5.

MAJOR SHARP FIVE SCALE-TONE STEPWISE SEVENTH CHORDS

To show the relationship to major scale-tone chords, harmonic minor scale-tone chords are shown as major #5. If the tone center is placed on step six of major sharp five, the scale (or mode) is harmonic minor (Aeolian natural seven).

Seventh chords built on first and sixth steps of major sharp five, $I_{ma}7\#5$ and $VI_{m}(ma7)$, are rarely used. Instead, this set is commonly combined with major scale-tone chords.

F Major Sharp Five Creates D Harmonic Minor on Its Sixth Step

See Melodically Superimposed Cadences/Harmonic Minor Is Mode VI of Major Sharp Five/[the modes of major sharp five in all keys](#), showing the harmonic minor scales they create on their sixth step.

$I_{ma}7\#5$	$II_{m}7$	$III7$	$IV_{ma}7$	$\#Vdim.7$	$VI_{m}(ma7)$	$VII_{m}7b5$
$F_{ma}7\#5$ I	$G_{m}7$ III	$A7$ V	$Bb_{ma}7$ VI	$C\#dim.7$ VIII	$D_{m}(ma7)$ X	$E_{m}7b5$ XII

Combining Major and Major Sharp Five Scale-Tone Chords

In this common composite of major and major #5, $I_{ma}7$ and $VI_{m}7$ are major scale-tone chords; $III7$ and $\#Vdim7$ are major sharp five scale-tone chords; $II_{m}7$, $IV_{ma}7$ and $VII_{m}7b5$ are common to both.

major and major #5 numbering for the columns of chords below:

$I_{ma}7$	$II_{m}7$	$III7$	$IV_{ma}7$	$\#Vdim7$	$VI_{m}7$	$VII_{m}7b5$
-----------	-----------	--------	------------	-----------	-----------	--------------

Aeolian mode and harmonic minor numbering for the columns of chords below:

MELODIC MINOR SCALE-TONE STEPWISE SEVENTH CHORDS

Melodic minor is used in classical music with a different version for ascending and descending. It ascends as major with flat three and descends as major with flat three, flat six and flat seven. We will use the ascending form only, as major with flat three. The first and third chords, Im(ma7) and IIIma7#5, are rarely used. Instead, this set is commonly combined with major scale-tone chords.

string set 6-4-3-2, 107350 voicing

Im(ma7)	IIIm7	IIIIma7#5	IV7	V7	VIIm7b5	VIIIm7b5
Fm(ma7) I	Gm7 III	Abma7#5 IV	Bb7 VI	C7 VIII	Dm7b5 X	Em7b5 XII
1 7 b3 5	1 b7 b3 5	1 7 3 #5	1 b7 3 5	1 b7 3 5	1 b7 b3 b5	1 b7 b3 b5

Combining Melodic Minor Scale-Tone Triads and Sevenths

Since the Im(ma7) and IIIIma7#5 are rarely usable, triads are substituted.

string set 6-4-3-2, 107350 voicing

Im	IIIm7	III augmented	IV7	V7	VIIm7b5	VIIIm7b5
Fm I	Gm7 III	Abaug IV	Bb7 VI	C7 VIII	Dm7b5 X	Em7b5 XII

ENHANCING A SINGLE CHORD

Add Harmony in Thirds

Add Tones Other Than Thirds

Creating Sequences with Alternating Tones

alternating five and six

alternating seven and six

alternating four and three

alternating a minor chord's five-sharp five-six-sharp five (James Bond)

alternating a major chord's 5-6-7-5-6 (Dance of the Sugar Plum Fairies)

Creating Sequences with Linear Scale Tones

scalar descent from chord tones

scalar ascent from chord tones

Creating Sequences with Chromatic Scale Tones

chromatic descent from a minor chord root

chromatic descent from a major chord root

chromatic ascent from a minor chord fifth

chromatic ascent from a minor chord fifth

CLUSTER PLAYING

Creating Tension with Dissonance

alternating tension and release

chord voicings with half and whole steps

add tone chords with notes a whole step or half step from a chord tone

Pedal Tone Concept with Long-Duration Neighbor Tone Triads

To create more dissonance, the duration of the neighbor tone chords is longer.

stepwise root neighbors

roots a fourth above or below

alternating neighbor tones and target chord tones in a progression

CHANGING MOODS WITH CHORD QUALITIES AND MODES

Ascend Major Scale Tone Modes In Fourths To Brighten The Mood

Descend Major Scale Tone Modes In Fourths To Darken The Mood

Substitute Minor II V For Major II V

CADENCES IN FOURTHS WITH OPTIONAL FLAT FIVE SUBSTITUTES

The Order of Perfect Fourths in the Major Scale

The Order of Fourths in Harmonic Minor

The Order of Fourths in Melodic Minor

The Order of Fourths in Harmonic Major

Changing Fourths to Chromatic with Flat Five Substitutes

DIMINISHED-SOUNDING DOMINANT PROGRESSION

Minor Seventh Flat Five in Minor Thirds

Ninth No Root in Minor Thirds

13b9 Over Flat Two in Minor Thirds

7b9 in Minor Thirds

7#9 in Minor Thirds

Diminished Scale and Parts of 13b9#9#11 in Minor Thirds

CHROMATIC PASSING CHORDS

Passing Chromatic Chords of the Same Quality

Use One or Two Lower Chromatic Neighbor Embellishment Chords

Flat Five Substitute Chromatic Sequences

Linear Chromatic Descent from Root

Linear Chromatic Ascent from Minor Chord Fifth

Mixing Passing, Lower, Flat Five and Linear Chromatic

VOICE LEADING WITH A MELODY, A SCALE OR CHROMATICALLY

Harmonize a Pentatonic Scale with Chords

Harmonize a Heptatonic Scale with Chords

Harmonize a Chromatic Scale with Chords

Top Voice Lead a Melody by Harmonizing It

Voice Lead a Melody in the Bass by Harmonizing It

Voice Lead a Melody in as Middle Voice by Harmonizing It

NEIGHBORING SCALE-TONE CHORDS

Pedal Tone Concept with Short-Duration Neighbor Tone Chords

To avoid dissonance, the duration of the neighbor tone chords should be shorter.

stepwise root neighbors

roots a fourth above or below

alternating neighbor tones and target chord tones in a progression

ELABORATING WITH A COMMONALITY CHORD

Use Voicing to Feature One or More Common Tones

Create a Scalar Passage or Melody with Notes Not in Common

QUARTAL CHORDS USED ABSTRACTLY

Major Scale Tone Quartal Chords

Exotic Effects with Upper Chromatic Neighbor or Flatted Secondary Roots

Harmonic Minor Scale Tone Quartal Chords

Melodic Minor Scale Tone Quartal Chords

Harmonic Major Scale Tone Quartal Chords

SEQUENCED ELABORATION

Combine the Elements Shown Earlier in This Section with Purpose

ABBREVIATION

- **Purposes of Abbreviating Chord Progression**
- **Abbreviating Chord Qualities**
- **Omitting Unessential Chords**
- **Omitting Cadences**
- **Summarizing with a Commonality Chord**

PURPOSES OF ABBREVIATING CHORD PROGRESSION

Abbreviating chord progression may include any of the following purposes:

- Simplifying a chord progression, making it easier to comprehend for the listener.
- Making it conceptually easier to improvise or compose on a progression.
- Facilitating performance at faster tempos on a chord progression.

Simplifying a Chord Progression

Simplifying a complex or lengthy chord progression is often effective in the initial presentation of the chord progression so the listener can more easily understand it when it is elaborated to the complex version.

Making it Conceptually Easier to Improvise or Compose

Abbreviating a chord progression can make it easier to improvise or compose with fewer chords to accommodate.

Facilitating Faster Tempos

To be able to perform chord changes at faster tempos, abbreviating a chord progression can help. Abbreviating the progression also makes it more effective to start cadences earlier in the setup bar at faster tempos. See [“Modal II-V-I Cadences and Turnarounds”/II-V-I Comping Pickup and Push Rhythms/Cadence to the Target I Chord with a Pickup/progressive late to early pickup, top-voiced jazz blues cadences.](#)

ABBREVIATING CHORD QUALITIES

See the chapter [Chord Naming Conventions](#).

When You Should Include the Root

In a familiar chord progression, the listener can imagine a chord root in context, but that isn't always the case. Here are a few situations where you should not omit the root:

- If you are playing the only instrument where other instruments won't be playing the root and you want the root to be heard.
- In a fundamental style like bluegrass, punk or fifties rock where the root is usually present.
- When the root is the tone center and you want it heard.
- When you want to make a classic chord progression like I-VIm-IIIm-V clearly audible, so you include the root of each chord.

Preferred Essential Chord Tones

These tones should be included if possible. Other tones are optional. General rule: include the third, the seventh (if involved) and any other note implied by the chord name.

examples of preferred essential chord tones

chord name	numbered tones	preferred essential tones
7	1-3-5-b7	3-b7
9	1-3-5-b7-9	3-b7-9
ma7	1-3-5-7	3-7
ma9	1-3-5-7-9	3-7-9
6	1-3-5-6	3-6
m6	1-b3-5-6	b3-6
13	1-3-5-b7-9-11-13	3-b7-13
13#11	1-3-5-b7-9-#11-13	3-b7-#11-13
13b9#11	1-3-5-b7-b9-#11-13	3-b7-b9-#11-13
m9(ma7)	1-b3-5-7-9	b3-7-9
9sus4	1-4-5-b7-9	4-b7-9
dim7 add 4	1-b3-4-b5-bb7 (bb7=6)	b3-4-b5-bb7
m9b5	1-b3-b5-b7-9	b3-b5-b7-9
7#5b5#9b9	1-3-b5-#5-b7-b9-#9	3-b5-#5-b7-b9-#9
13b9#9#11	1-3-5-b7-b9-#9-#11-13	3-b7-b9-#9-#11-13

Simplify Ninth or Thirteenth to Seventh

ma7 family

ma9, ma9#11, ma13, ma9/6 can all be played as ma7.

dominant 7 (7) family

9, 9#11, 13, 9/6 can all be played as 7.

minor 7 (m7) family

m9, m11, m13, m9/6 can all be played as m7.

minor 7b5 (m7b5) family

m7b5, m9b5, m11b5, m13b5, m9/6b5 can all be played as m7b5.

minor major 7 (m<maj7>) family

m9(ma7) can be played as m(maj7).

Omit #9, b9, add 9, 6, #11, b13

Unless it is a signature chord sound, like E7#9 in Purple Haze, D7#9 in Taxman or E7b9 in I Want You (She's So Heavy), the sharp nine (#9) or flat nine (b9) can be omitted.

Any of these found at the end of a chord name can be omitted: add 9, 6, #11, b13.

Omit the Bass Note in Slash Chords

Usually, the bass note indicated after the slash in a slash chord name ("A" in the B/A chord) can be omitted. Sometimes, the bass note after the slash is in effect the root of a suspended chord, such as G/A (G-B-D/A) being A9sus4 no fifth (A-D-E-G-B without "E").

Retain the Third and Fifth of the Triad Basis

Play only the triad part, only the seventh chord part or only the sixth chord part, optionally omitting the root.

major triad basis

ma7, ma9, 7, 9, 13, 6, add9, 6/9 all have a major triad basis with 1-3-5.

minor triad basis

m7, m9, m(maj7), m9(ma7), m11, m13, m6, m add9, m6/9 all have a minor triad basis with 1-b3-5.

diminished triad basis

diminished 7, m7b5, m9b5, m11b5, m13b5, m6b5, all have a diminished triad basis with 1-b3-b5.

augmented triad basis

7#5, 9#5, 13#5, ma7#5, ma9#5, all have an augmented triad basis with 1-3-#5.

suspended fourth (sus4) triad basis

7sus4, 9sus4, 11, 13sus4, ma7sus4, ma9sus4, all have a suspended fourth triad basis with 1-4-5.

suspended second (sus2) triad basis

7sus4, 9sus2, 13sus2, ma7sus2, all have a suspended second triad basis with 1-2-5.

major flat five triad basis

ma7b5, ma9b5, 7b5, 9b5, 13b5, all have a major flat five triad basis with 1-3-b5.

retain b5 or #5

If a chord has a flat five or sharp five, it should be retained.

#11 and b13 Can Be Omitted While Retaining the Fifth

sharp eleven (#11)

When a chord has a “#11”, it still has an unaltered fifth, in effect it has both a natural fifth and flat fifth.

flat thirteen (b13)

When a chord has a “b13”. Sharp five is enharmonically the same as flat. Flat 13 (b13) is flat six (b6) up an octave. A chord with a “b13” still has an (unaltered) fifth. In effect it has both a natural fifth and sharpened fifth.

Dominant Eleventh Is Usually a 9 Suspended Fourth Chord

Almost always, a dominant eleventh chord (C11) is voiced without a third, making it 9sus4.

OMITTING UNESSENTIAL CHORDS

Define Essential Chords to Conceive Unessential Chords

Once you define the essential chords, the ones you will keep, you can consider omitting some of the remaining unessential chords.

The most essential chord is the tonic chord, the chord the key is named after. The second most essential chord is most often the V chord. The cadence from V to I is the *authentic cadence*. This would be G to C in the key of C major or G to C minor in the key of C minor. The plagal cadence is IV-I and is nicknamed the “amen cadence” because of its use at the end of Christian hymns.

Two-chord songs can illustrate possibilities of essential chords. Two-chord progressions used in songs include:

I-V

I-II^m

I-IV

II^m-V (I^m-IV in the key of II^m)

III-IV (I-bII in the key of III)

V-IV (I-bVII in the key of V)

VI^m-IV (I^m-bVI in the key of VI^m)

Chords with fewer tones in common with an essential chord that they follow or precede are less essential. However, a V chord (5-7-2) has the fifth of the key in common with the I chord (1-3-5), yet is more important than the II chord (2-4-6), which has no tones in common with the I chord (1-3-5). This is due to our familiarity with the authentic cadence (V-I) as a strong means of establishing the key on the I chord. So, authentic cadences (and plagal cadences to a lesser degree) tend to make the V chord and the IV chords essential.

Arbitrary Essential Chords

Two adjacent chords with shared tones, like II^m7 (2-4-6-1) and V9 (5-7-2-4-6), which share 2-4-6 can be replaced with one of them. Using only the II^m7 is softer and more bluesy. Using only the V9 stronger and more harsh.

Chromatically Raised Tones in Secondary Dominants

When scale-tone chords are modified to secondary dominants, notes are changed chromatically. See the chapter “[Secondary Dominant](#)”.

Some scale-tone secondary dominant chords raise a note chromatically. II^m7 (2-4-6-1) changes to II⁷ (2-#4-6-1) with a sharp four of the key. III^m7 (3-5-7-2) changes to III⁷ (3-#5-7-2) with a sharp five of the key. VI^m7 (6-1-3-5) changes to V⁷ (6-#1-3-5) with a sharp one of the key.

Other scale-tone secondary dominant chords lower a note chromatically. I^ma7 (1-3-5-7) changes to I⁷ (1-3-5-b7) with a flatted seventh of the key. I^ma7 (1-3-5-7) changes to I⁷ (1-3-5-b7) with a flatted seventh of the key.

More colorful and dissonant secondary dominants may alter multiple tones, some raised chromatically, some lowered chromatically. III^m7 (3-5-7-2) changes to III⁷#5b9 (3-#5-7-2-4) with a sharped fifth of the key and an added fourth of the key. III^m7 (3-5-7-2) changes to III⁷#5#9 (3-#5-7-2-5) with both a sharped fifth of the key and an unaltered fifth of the key. V⁹ (5-7-2-4-6) changes to V⁷#5#9 (5-7-#2-4-#6) with a sharped second and a sharped sixth of the key.

Preserving Signature Chords

Chromatically changed notes may be a signature aspect of the chord progression where chords with chromatic changes should be retained.

Hesitation Blues

See “[Summary of Chord Progression Types](#)”/Blues/ [Hesitation Blues - Starting with Four Bars of VI^m](#).

The second chord in *Hesitation Blues* by the Hot Tuna needs to be dominant seventh, not minor seventh, to sound like the song. In the C parent major scale for *Hesitation Blues* in the key of A minor, the chords were largely composed with the C major scale, where chord on the third step of the scale is E^m or E^m7, but E^m7 was changed to E⁷, making it a secondary dominant to lead more strongly to the A^m chord.

As *Hesitation Blues* continues, it uses C⁷ and F⁷. C⁷ changes the I^ma7 (1-3-5-7) of the parent C major scale to C⁷ (1-3-5-b7) flatting the seventh of the C major scale for a more bluesy chord sound. Likewise, F⁷ changes the IV^ma7 (4-6-1-3) of the parent C major scale to F⁷ (4-6-1-b3) flatting the third of the C major scale for a more bluesy chord sound.

Ignoring Chords in Lieu of the Key Tonality

While the listener hears the chords change during a chord progression, they also have a sense of the overall key, which is usually more important. Melody often speaks to the key and ignores brief chords along the way, even when those brief chords are essential chords.

the two-second rule

When a melody is sounding the key briefly during a chord that is dissonant with the key for less than two seconds, the listener is usually not disturbed by the temporary dissonance and harmonic disagreement. If the duration of the harmonic disagreement is over two seconds, the listener is more likely to recognize the dissonance.

In the first few bars of Hesitation Blues, mentioned earlier, where the chord progression is alternating two beats of Am and two beats of E7, melody could be used that continuously sounds A minor. The listener would be satisfied with the aural reference to the key of Am, even though, at 120 beats per minute (for example), the E7 chord keeps periodically sounding for one second.

OMITTING CADENCES

Cadences punctuate the important (essential) chords in a progression. Sometimes cadences may be distracting and may make the chord progression too busy.

You often may want to omit one of the chords in the cadence. You may want V-I , instead of II-V-I for example. Sometimes the abbreviation of cadences is for simplicity's sake, sometimes for practicality when the tempo is too fast to play and hear all of the chords.

SUMMARIZING WITH A COMMONALITY CHORD

See the chapter “[Commonality Chords](#)”.

Scale-Tone Commonality Chords

roots in fourths

When scale tone chords progress with their roots ascending in fourths, the root, third and fifth of a chord are the fifth, seventh and ninth of the next chord. You could treat the chords as a triad made with those common tones. In the key of C, the root, third and fifth of C major are C-E-G and are the fifth, seventh and ninth of F major ninth. So a melody on a C major triad sounds well over both chords.

roots in thirds

When scale tone chords progress with their roots ascending in thirds, the third, fifth and seventh of a seventh chord are the root, third and fifth of the next chord. You could treat the chords as a triad made with those common tones. In the key of C, the third, fifth and seventh of C major seventh are E-G-B and are the root, third and fifth of E minor. Alone, E-G-B is an E minor triad, so a melody on an E minor triad sounds well over both C major seventh and E minor (or Em7) chords.

facilitate more commonality with altered versions of chords

By thinking of a C chord as C6 (C-E-G-A), it then has the same notes as Am7 (A-C-E-G). Likewise, thinking of Am as Am7 (A-C-E-G), it then has the same notes as C6. This allows you to play over C-Am as C6 or Am7.

C6 and Am7 are chord synonyms (see the “[Commonality Chords](#)”/[Chord Synonyms](#)). Chords don’t have to be complete synonyms to have many common tones. Add tones to one of the chords that is in the other chord. In playing Gm-C (G-Bb-D to C-E-G), you could add “Bb” and “D” notes to the C chord, making C9, which then has G-Bb-D in common with Gm.

Triads Common to Multiple Scale-Tone Triad, Seventh or Ninth Chords

6 1 3
4 5
2 7

The most common cause of commonality chords is shared thirds, where the chords involved were build from the same cycle of third, the *tertian* cycle. “Tertian” refers to a series of thirds. In full-tertian arpeggios, each note is a scale tone third from the next in a continuous series of every-other-note, using the numbered cycle 1-3-5-7-2-4-6 (see the circle at the left). They can build major scale-tone arpeggios constructed in thirds (every-other-note).

“back-cycling” thirds

Notice that each of the the groups of three chords in the commonality examples below involve three chord roots in descending thirds, counter-clockwise on the 1-3-5-7-2-4-6 cycle shown above. I-VIm7 and IVm9, for example use the root cycle 1-6-4, three counter-clockwise numbers in the 1-3-5-7-2-4-6 cycle.

In each of the groups below, the third chord is a ninth. Major scale-tone ninth chords are not acceptable on steps III nor VII. IIIIm7b9 are VIIIm7b5b9 are not currently acceptable. However, if the thirds of each are changed to major thirds (altering the parent major scale), the III7b9 and VII7b5b9 chords are acceptable (VII7b5b9 is quite dissonant, though).

use these full-tertian fingerings to test the commonality groups below

In C major, any “1” above would be on “C. In the same black or gray color, on the same diagram, play 1-3-5 for I major (C major), 6-1-3-5 for VIm7 (Am7) and 4-6-1-3-5 for IVma9 (Fma9).

I major commonality

chord	I major	VIm7	IVma9
parent scale tones	1-3-5	6-1-3-5	4-6-1-3-5

II minor commonality

chord	II minor	VIIIm7b5	V9
parent scale tones	2-4-6	7-2-4-6	5-7-2-4-6

III minor commonality

chord	III minor	I _{ma} 7	VI _m 9
parent scale tones	3-5-7	1-3-5-7	6-1-3-5-7

V major commonality

chord	V major	III _m 7	I _{ma} 9
parent scale tones	5-7-2	3-5-7-2	1-3-5-7-2

VI minor commonality

chord	VI minor	IV _{ma} 7	II _m 9
parent scale tones	6-1-3	4-6-1-3	2-4-6-1-3

Finding Commonality Chords in a Progression

In summary as described in detail below, an effective procedure is to look for root movement in thirds, fourths or fifths in the parent major scale.

analyze the progression by number in the parent major scale

Work with chord progressions made from a single parent scale first. Convert the letter names to numbers (C_{ma}7-Am7-D_m7 is I_{ma}7-VI_m7-II_m7).

memorize the I major, II_m, III_m, V major and VI_m root groups

Each of the groups “backcycles” thirds presenting three possibilities in the reverse order of thirds (the 1-3-5-7-2-4-6 cycle shown earlier in reverse order). I major is 1-6-4, II minor is 2-7-5, III minor is 3-1-6, V major is 5-3-1, VI minor is 6-4-2. The root groups are respectively 1-6-4, 2-7-5, 3-1-6, 5-3-1 and 6-4-2.

the goal is to find two or all three chords from the same root group

You need to find two or three chords in the chord progression with their roots in the same root group. They must be contiguous (next to each other) in the chord progression but can be in any order. For example, I major and IV_{ma}9 qualify as commonality chords, because they are both in the I major commonality group, even though they are not continuous in the I-VI_m7-IV_{ma}9 order in which they were conceived.

look for root movement in thirds, fourths or fifths

Look for two or three consecutive chords with their root movement in thirds, fourths or fifths. They need to be part of the 1-6-4, 2-7-5, 3-1-6, 5-3-1 or 6-4-2 groups described above. For each of the root intervals (thirds, fourths and fifths), there is an implication of which tones in the root group they would involve. In the list of those implications below, the thirds are the first two or the last two numbers in forward or reverse order and the fourths or fifths are the first and last numbers in forward or reverse.

shared-tone triad	I major	II minor	III minor	V major	VI minor
group	1-6-4	2-7-5	3-1-6	5-3-1	6-4-2
thirds	1-6 or 6-4	2-7 or 7-5	3-1 or 1-6	5-3 or 3-1	6-4 or 4-2
fourths or fifths	1-4	2-5	3-6	5-1	6-2

Turnarounds with Two Common Tones

descend five and seven voice leading rules

In this voice leading for complete four-note scale-tone seventh chords or arpeggios, four things happen, one to each note:

1. The root the current chord is retained to become the next chords' fifth.
2. The third of the current chord is retained to become the next chords' seventh.
3. The fifth of the current chord descends one scale tone in the parent scale to become the root of the next chord.
4. The seventh of the current chord descends one scale tone in the parent scale to become the third of the next chord.

Turnarounds with Three Common Tones

descend seven voice leading rules

In this voice leading where scale-tone seventh chords or arpeggios become a ninth chord or arpeggio with its root up a perfect fourth, four things happen, one to each note:

1. The root the current chord is retained to become the next chords' fifth.
2. The third the current chord is retained to become the next chords' seventh.
3. The fifth of the current chord retained to become the next chords' ninth. The ninth should not be the bass, so the fifth of the current chord should be in the upper or mid range of pitch.
4. The seventh of the current chord descends on scale tone in the parent scale to become the third of the next chord.

In summary, scale tone seventh chord retains its root, third and fifth to become the fifth, seven and ninth of the next chord. The seventh of the current chord descends in the parent scale to become the third of the next chord. The next chord will be a ninth chord with no root.

Descend seven voice leading can be applied to a major scale tone *III*m7, *VI*m7, *II*m7, *V*7 and *I*ma7 chords or arpeggios. It doesn't work beginning with a *IV*ma7, because the next chord would be *VII*m7b5b9, a currently unacceptable chord quality. It can work from *VII*m7b5 to *III*7b9 no root, where the *III*m7 chord has been changed *III*7, a dominant seventh, allowing a *III*7b9.

Using Substitute Chords to Create Commonality Chords

Choosing from all the types of substitute chord options shown in “[Substitution](#)”/ [Categories of Substitute Chords](#), you can find a substitution for one chord that provides common tones with an adjacent chord in a chord progression. There is usually more than one substitution option that will produce commonality. You can sometimes use substitutes for both chords.

harmonic awareness in a commonality context

Exercises like the three tables below can build your ability to more quickly find commonality chords for a given progression.

Commonality of key tones 1-3-5 for the I-VI-II^m-V chord progression in the key of C. In each column, the original chord is shown at the top, followed by substitute options below. All substitute chords include tones 1-3-5 of the key of C.

original chord	C	A7	Dm7	G7
substitutes	Cma7	A7#9	Dm11	G13sus
	C7	Am9	D9sus4	Fm6 (neg. harm.)
	C7#9	Eb6=Cm7	Fma9	
		Eb13	Abma7#5	

Commonality of key tones 3-5-7 for the I-VI-II^m-V chord progression in the key of C. In each column, the original chord is shown at the top, followed by substitute options below. All substitute chords include tones 3-5-7 of the key of C.

original chord	C	A7	Dm7	G7
substitutes	Cma7	A9	none	G6
	Em7	Am9		G13

Commonality of key tones 3-5-b7 for the I-VI-II^m-V chord progression in the key of C. In each column, the original chord is shown at the top, followed by substitute options below. All substitute chords include tones 3-5-b7 of the key of C.

original chord	Cma7	A7	Dm7	G7
substitutes	C7	A7b9	none	G7#5#9
	Edim,Em7b5			

using commonality to abbreviate I-VI-II-V to I-II^m

I Got Rhythm/One Note Samba Example

I Got Rhythm	Bbma9	Gm7	Cm7	F7
One Note Samba	Dm7	Db7	Cm11	B7b5
substitutes	Bb7	Bb7b9#9	F9sus4	F9#11

One Note Samba's substitutes for I-VI-II-V "rhythm changes"

George Gershwin's *I Got Rhythm* is based on the I-VI-II-V chord progression, Bbma7-Gm7-Cm7-F7 in the key of Bb. Carlos Antonio Jobim's *One Note Samba* is also in the key of Bb, yet begins on a Dm7 chord. The first chord should be thought of as Bbma9 no root, the source of the hidden root chord, Dm7. See "[Substitution](#)"/[Categories of Substitute Chords/Hidden Roots](#),

The second chord of One Note Samba is Db7, which is a flat-five substitute for Gm7, the second chord in I Got Rhythm (see "[Substitution](#)"/[Categories of Substitution/Flat Five Substitute](#)). The third chord, Cm7, is unchanged. The fourth chord, B7b5 (=Cb7b5), is a flat five substitute for F7.

using substitutes and commonality to abbreviate One Note Samba to I-V

I Got Rhythm	Bbma9	Gm7	Cm7	F7
One Note Samba	Dm7	Db7	Cm11	B7b5
substitutes	Bbma7	Bb7b9#9	F9sus4	F9#b5

Bbma9 is the “hidden root” basis of Dm7. Bb7b9#9 has Bb major tones 1-3-5 in common with Bbma9, Bb7b9#9 also includes all the tones of Db7. This allow treating the first two chords as a Bb major triad while having the option to elaborate each to the complete chord. Thinking the third chord as F9sus4, includes all the tones of Cm11, in the context of the V chord (F). Thinking of the last chord (Bb7b5) as its synonym F7b5 would allow thinking in F during the last two chords. By thinking of the last chord as F9b5, it then shares the root, flatted seventh and ninth with F9sus4, while the fifth of F9sus4 is flatted in F9b5 and the fourth of F9sus4 (Bb) becomes the major third (A).

an interesting chromatic voice leading in One Note Samba

The root, fifth and seven of each chord descend chromatically to the next chord except the fifth of Cm7 descends a whole step to the flatten fifth of B7b5.

The diagrams below allow visualizing the chromatic voice leading on strings 5-4-3.

The diagrams below allow visualizing the chromatic voice leading on strings 4-3-1.

The diagrams below allow visualizing the chromatic voice leading on strings 4-2-1. These are wide spans. Be careful not to stress your hand.

Bbma9nr VIII

Cm7 VI

B7b5 V

Comping Strategies

- **Communicate to Coordinate Parts**
- **Summarizing the “Comper”**
- **Multiple Chording Instruments**
- **Keeping Time Parts**
- **Isolate by Pitch**
- **Isolate by Time**

- **Jazz Piano and Guitar Commentary**

Charlie Christian, Oscar Moore, Barney Kessel, Herb Ellis, Joe Pass, Wes Montgomery, Pat Martino, George Benson, Russell Malone, Ron Eschete, Jim Hall, Pat Metheny, Frank Vignola, Bireli Lagrene, Bill Frissel, John McLaughlin

COMMUNICATE TO COORDINATE PARTS

Awareness is everything. It really helps to talk to the other musicians about the game plan to make all of the parts audible and to bring out the important parts for the listener.

Clearly State Your Intention with Your Part

If the other chording instrument doesn't give you part of the bar or a range of pitch, try harder to clearly state your part. Repeat the part you intend, like playing on beats two and four, over and over. Use eye contact, body language, or verbal language (if you have the opportunity). Do your best to communicate and make it happen. Sometimes, you just have to revert to just keeping time or lay out (don't play) on a section and talk about it later.

SUMMARIZING THE COMPER

Summarize the Comper (Other Accompaniment Player)

If you can summarize what another comper is playing with a set of rules like the EXAMPLE below (listen for patterns in two bar segments):

starts every two bars on one
most commonly pushes three
never plays on two

Once you have summarized the comper's part, you should be able to duplicate the part, elaborate on it or play in spaces between it to make an ensemble part (ensemble parts are usually hard to make work).

If You Cannot Summarize

If you cannot summarize, play a keeping time part or play at a different rhythmic level if there is enough room in the arrangement for your added. Like verbal conversation, it hard to understand more than two or three significant voices (or parts) at once. Likewise in music, don't try to add another significant part if two or three are already going on.

Anticipate The Soloist as You Do Another Comper

The process is very similar in this communication mode. With another comper, you tend to duplicate or make ensemble parts, rarely making more than one significant statement together. Comping with a soloist, you find fewer points of common accent. You'll typically find yourself duplicating accents on more like a quarter or less of the soloists points of emphasis, as opposed to over half of these played by another comper.

Use a Looper Pedal

The best accompaniment to practice with is other musicians. Other musicians are not always available to back you up while you practice. The second best accompaniment to practice with is a looped pedal.

looper pedals with quantizing

Most looper pedals, like the Boss RC series (RC-1, RC-3, RC30, etc.) have quantizing, where they anticipate your tempo and cause the loop to repeat at the nearest beat. The longer the loop is, the more difficult you will find it to tap the pedal and make a seamless loop. For longer loops, listen to a metronome which you record the loop.

I like the idea of not saving loops, but demanding yourself to keep playing the accompaniment each time. Good practice.

looper pedals without quantizing

The TC Electronics Ditto looper is a great looper. It has no quantizing, so your loop may seem perfect. However, you may have slightly rushed or dragged the tempo and not noticed it.

get both

If you can afford it, get an RC-1 and a Ditto. The RC-1 will make it more clear when you have not retained your tempo. Then you can apply that skill to using the Ditto and have the very slight discrepancies recorded into the loop, so it has a human feel.

Five Common Steps With Software Players

These software applications play or generate comping rhythms. They are all different, and there is a preferred order in which to use them for our purposes. The software players are generally good to train yourself to play with a regular tempo, but you should regularly move on to using a looper or playing with another musician.

Chops and Impro-visor

Chops (Mac only) and Impro-visor (cross-platform) are not random. They the same comping rhythm over and over. Chops 1.2 (no new release available as of March, 2014) has fifteen styles and is \$4.99 for Mac. Impro-visor (v 5.16) has 131 styles and is free! On a Mac, you must (at your own risk) open system preferences/Security & Privacy, unlock (lower left) and temporarily make the setting "Allow applications downloaded from: Anywhere (you can change it back after installation).

Band In A Box

Band In A Box (midi versions) generates different parts for each section, but every time you play the section, it plays the part the same. It has hundreds (800?) midi styles. I don't like the idea of their audio loops, and only use the midi version, so I can discretely edit the midi.

Ireal Pro

Ireal Pro has a random generator, but follows a style. It is available for Mac, IOS (iPad and iPhone) and Android, but not PC (there are emulators, but that gets complicated). The random generator is a great test of your skills in the later part of your comping development. Use the five-se

which software in which order

So, if you had all of these programs, the best order of use would be Chops, Impro-visor, Band In A Box (midi versions), then Ireal Pro. At least use the free Impro-visor and learn to change the styles.

five steps to comping

1. Summarize a few bars of the comper from a recording. The predictably ranges from Chops (easiest) to Ireal Pro (most difficult). Play back the recording and see if you were right, repeat if necessary.
2. Play with the recording. Try to anticipate and play the same parts of the bar as the comper. Start with "keeping time", like just quarter notes (play on each beat). Where you can, play what you expect the "comper" to play. If the comper part is really easy to anticipate, play it with slight elaborations, like some "keeping time".

When anticipating is not working, play a keeping time part, like all quarter notes. Try cautiously to go back to anticipating a little at a time, as you can.

Going back and forth from keeping time to anticipating is very effective.

3. Sample a larger region of the tune, like twelve or sixteen bars and make a general summary. Usually there is so much more information in summarizing a larger section (12 bars instead of four) that you need to generalize. If the part was not random-generated (Ireal Pro only) and you can listen to it again, listen and see if you were right. If you are using Ireal Pro, try to record it, so you can play it back to see if you were right,

When you change a style in any of these programs the summary rules change, like playing with a different person.

4. Now play along with the longer section (step 4). Like with the smaller sampling, but more cautiously, play and combine anticipating, keeping time and elaborating on the other comping part. Of the software mentioned here, Ireal Pro is the best one to use before playing with another musician. Like people, Ireal has a random generator and plays differently every time, but within a style.
5. Play with an actual human being-the ultimate musical experience.

MULTIPLE CHORDING INSTRUMENTS

The Keyboardist

A piano has a range of seven octaves, roughly the same as an entire orchestra! Comping guitar is roughly the middle two octaves. A wise keyboard player will listen to the comping guitarist and be aware of the range in which the guitar is sounding, visualizing it on the keyboard and either avoiding that range or careful building ensemble parts with the guitar.

Likewise, a comping guitarist can visualize what part of the keyboard range they are playing in and watch the keyboardist to coordinate range and rhythm so the guitar and keyboard can both be heard. Middle "C" is the second string, first fret, equivalent to the third string, fifth fret or the fourth string, tenth fret.

The Other Guitarist Or Other Chording Instrument

Hopefully, you use at most two guitars. Three is really challenging. Any chording instrument needs consideration in coordinating parts, including keyboards, chording string instruments like banjo, accordion, melodica, harmonica and so on.

Like with a keyboard, two or more chording instruments should be aware of one another's range of pitch and placement in the bar rhythmically.

“KEEPING TIME” PARTS

Staccato Quarter Note Chords

Keep time by playing chords of the same value like all quarter notes. In the common time signatures like 4/4 and 3/4, quarter notes are one beat. In larger bands or orchestras of over four instruments, it is typical that the guitar plays staccato quarter notes (about half their duration, like an eighth note and an eighth note rest).

rhymic feel with two or more instruments “keeping time”

When two or more instruments just keep time (with all quarter notes, for example), each chord usually takes a slightly long period of time to sound than it would on one of the instruments. If you listen to Charlie Christian with Benny Goodman, for example, he often doubles staccato quarter notes with his chords as the bass player is playing a staccato walking bass (or other quarter note bass). Probably due to the resonance of the bass (and its longer wave length as my friend Larry Frick suggested), the bass notes linger longer than the guitar chord. The event starts with both of them (often including a snare also), but the bass continues a few milliseconds after the guitar has died out. The bass player and guitar player can work with this rhythmic dynamic and make the bass linger more or less and create different rhythmic feels.

One of the instruments can intentionally “slice” the beat and play ever so slightly before or after the beat. Before sounding aggressive and anxious, after sounding relaxed.

Other Durations of “Keeping Time” Parts

half or whole notes

If the mood directs less activity (in a ballad, for example), longer durations are appropriate. They are also useful in making your part audible with other parts when there is a lot of chordal activity. If the piano is playing fast syncopated eighth chords, you can duplicate or be different. By playing half or whole note chords, you are at a different rhythmic level and can be heard. To make your part “hipper” you may want to “push” the beat at the beginning of the chord and play on the “and” of the beat before the chord starts on the chart (or conceptually).

eighth or sixteenth notes

Similarly to using chords of longer duration, you can play eighth, eighth triplet or sixteenth (sixteenths are rare) in duplicating the snare or other chording instrument (piano or guitar). Of course, you can use them also if the drummer and other chording instrumentalist is playing long durations against you.

Thematic “Keeping Time” Parts

“Keeping time” parts don’t have to be uniform, such as all quarter note or eighth note chords. They can also be short and repetitive rhythmic themes. As Charlie Christian, Barney Kessel and Herb Ellis have illustrated, they also can be single note themes, single notes mixed with chords or top voiced chords.

Start With Common Tone Voicing

Learn to play the cadences for each chord in the 7362514 sequence that is the backbone of chord root movement with any particular tone of the parent major scale as the highest note (1, 2, 3, 4, 5, 6 or 7). Play through a jazz blues doing this, for example.

Here are the chords for Charlie Parker’s Au Privave or Now’s The Time (same chords) with common tone “1”.

Now’s tZhe Time or Au Privave (each cell is one bar)

<div>F13 VI</div> <div></div> <div>b7 3 6 1</div>	<div>Bb9 V</div> <div></div> <div>3 b7 2 5</div>	<div>F13 VI</div> <div></div> <div>b7 3 6 1</div>	<div>F13 VI</div> <div></div> <div>b7 3 6 1</div>		
<div>Bb7 VI</div> <div></div> <div>1 b7 3 5</div>	<div>Bdim7 VI</div> <div></div> <div>1 6 b3 b5</div>	<div>F13 VI</div> <div></div> <div>b7 3 6 1</div>	<div>A7#5 V</div> <div></div> <div>1 b7 3 #5</div>	<div>D7#9 IV</div> <div></div> <div>1 3 b7 #9</div>	
<div>G7 IV</div> <div></div> <div>5 1 3 b7</div>	<div>C7sus4 III</div> <div></div> <div>1 5 b7 4</div>	<div>F13 VI</div> <div></div> <div>b7 3 6 1</div>	<div>D7#9 IV</div> <div></div> <div>1 3 b7 #9</div>	<div>Gm7 III</div> <div></div> <div>5 1 b3 b7</div>	<div>C7sus4 III</div> <div></div> <div>1 5 b7 4</div>

See [Voice Leading/Jazz Blues/Common Tone](#) for more.

Learn Top Voice Leading

The process in voicing chords for comping over a melody requires an extensive knowledge of top voice leading. Joe Pass, Barney Kessel and Herb Ellis were leading experts. You need to be able to voice any cadence with any possible top voices and not conflict with the melody. Even when comping during an improvised section on the same chord progression as the head, it is good practice to know how to not conflict with the melody.

You need to conceive the important melody notes on each of the beats or “pushes”. Quarter note melody is clear, one note per beat. With an eighth note melody, the important notes are on the beat. With syncopated eighths, the important notes are those on the beat and those that “push” the beat (are on the “and” before the beat without a note on the beat the note precedes).

You need to thoroughly study the important cadences to songs with consideration of their top voice-leading relationship to the melody.

First Voice Existing Cadences

To be progressive (and to make sure you get started), begin with common tone voicing on existing cadences in songs. There’s plenty of work to do in that category before enhancing the progression with added cadences .

Once you have a handle on playing the basic changes to a song with common tone [voice leading](#) you can begin scalar [voice leading](#) (see [Most Usable Voice Leading](#)).

Next, Superimpose Cadences

Like with the basic changes on a tune, start superimposing cadences to target chords with [common tone voice leading](#).

Listen to the other chording instruments and try to match the mood of the scale type, generally using major (see [II-V-I](#) and [I-VI-II-V](#)), [chromatic](#), [harmonic minor](#) or [melodic minor](#) cadences with like kind. As you practice each type, you will become able to recognize its sound when others play it.

Thoroughly study [Melodically Superimposed Cadences](#).

ISOLATE BY PITCH

Three note chords, can more easily “claim a range”. Even if you use four-note chords, work with the piano player to each play in separate ranges of pitch.

ISOLATE BY TIME

Playing Different Parts of the Bar

Create an ensemble part with the piano, where you play part of the bar, and they play another part. For example, while they play on beats one and three in 4/4, you play on beats two and four.

Play at a Different Rhythmic Levels

If the piano is playing at the quarter note level, play at the eighth, half or whole level. If the piano is at the eighth level, play at the sixteenth, quarter or half level.

“Keeping Time” Ensemble Parts

Keeping time parts can be a composite of two or more instruments, each playing on a different part of the bar. Tower of Power does a superb job with this, as do most Afro Latin and Afro Latin ensembles and big bands in general.

JAZZ GUITAR AND PIANO COMMENTARY

These recordings are available on subscription sites like rdio.com, <http://www.rhapsody.com/> and other subscription sites. Or, you can buy them at amazon.com or itunes.com (or itunes store accessed from your device).

Charlie Christian

title

[Flying Home](#)

album

Charlie Christian/Genius of the Electric Guitar or The Essential Benny Goodman or Benny Goodman's Greatest Hits or Benny Goodman/Benny Goodman Sextet

comments

Moderato tempo. Staccato quarter notes accented on two and four with bass (see below). Two and four is called the "back beat" (one and three being the primary metric accents). Due to the resonance of the bass, the bass lingers slightly longer on each note than the guitar chord.

title

[Star Dust](#)

album

Charlie Christian/Genius of the Electric Guitar or Benny Goodman/Benny Goodman Sextet

comments

Slow tempo. "Tuba" style root and fifth bass on one and three with staccato quarter notes on all four beats. This reverses the rhythmic levels as compared to "Flying Home".

title

[Rose Room](#)

album

Charlie Christian/Genius of the Electric Guitar or Benny Goodman/Benny Goodman Sextet

comments

Moderate tempo. "Tuba" style root and fifth bass on one and three with staccato quarter notes on all four beats (same as "Star Dust", above).

title

[Seven Come Eleven](#)

album

Charlie Christian/Genius of the Electric Guitar or Benny Goodman/Benny Goodman Sextet

comments

Fast tempo. Charlie repeats a single note theme during the vibes solo and staccato quarter notes with the bass during the clarinet solo. Now, the guitar and bass have identical rhythms.

<u>title</u>	<u>album</u>	<u>comments</u>
Gone with "What" Wind	Charlie Christian/Genius of the Electric Guitar or Benny Goodman Sextet/Vintage Jazz	Fast tempo. Staccato quarter note chords with the bass, like "Seven Come Eleven", above.

<u>title</u>	<u>album</u>	<u>comments</u>
Grand Slam (Boy Meets Goy)	Charlie Christian/Genius of the Electric Guitar or Benny Goodman Sextet/Charlie Christian & Benny Goodman	Fast tempo. Lay out during clarinet solo. Muted staccato quarter note chords with the bass during the vibe solo (like "Seven Come Eleven", above).

<u>title</u>	<u>album</u>	<u>comments</u>
Air Mail Special	Charlie Christian/Genius of the Electric Guitar or The Essential Benny Goodman	Fast tempo. Staccato quarter note chords with the bass. Single note enesemble themes during head.

<u>title</u>	<u>album</u>	<u>comments</u>
Six Appeal	Charlie Christian/Genius of the Electric Guitar or Benny Goodman/Benny Goodman Sextet	Moderate tempo. Staccato quarter note chords on all four beats with bass on one and three (like Star Dust, but a faster tempo). Single note enesemble themes during head. Offbeat hits with vibes and piano starting at 1:53.

Oscar Moore (with Nat King Cole)

<u>title</u>	<u>album</u>	<u>comments</u>
Beautiful Moons	Nat King Cole/100 Unforgettable Hits or The Complete Capital Recordings	Moderally staccaato quarter notes, heavily ahead of the beat (not on the "and", just a small fraction before the beat). Doesn't push the beat (play on the "and" before the beat, then not on the beat) when the piano does.

<u>title</u>	<u>album</u>	<u>comments</u>
Don't Blame Me	Nat King Cole/100 Unforgettable Hits or The Complete Capital Recordings	Moderally staccaato quarter note chords, heavily ahead of the beat (not on the "and", just a small fraction before the beat). Some single note connection of chords. Secondary melody ensembled with the piano during the verses. Arpeggiated chords just before the bridge (especially at 2:54). Sounds worked-out, like Russell Malone's parts often do.

<u>title</u>	<u>album</u>	<u>comments</u>
I'm in the Mood for Love	Nat King Cole/100 Unforgettable Hits or The Complete Capital Recordings	Moderally staccaato quarter note chords, heavily ahead of the beat (not on the "and", just a small fraction before the beat). Apart from Nat pushing beats on the "and". He some-times "slices" before it with Oscar. Scalar top voice leading . Some single note connection of chords. Sounds worked-out.

<u>title</u>	<u>album</u>	<u>comments</u>
I'm Lost	Nat King Cole/100 Unforgettable Hits or The Complete Capital Recordings	Moderately staccato quarter note chords, heavily slicing before the beat (not on the "and", just a small fraction before the beat). Scalar top voice leading . Some single note connection of chords. Sounds worked-out.

<u>title</u>	<u>album</u>	<u>comments</u>
Straighten up and Fly Right	Nat King Cole/100 Unforgettable Hits or The Complete Capital Recordings	Staccato quarter note chords, slicing before the beat. Scalar top voice leading .

Barney Kessel

<u>title</u>	<u>album</u>	<u>comments</u>
Jeepers Creepers	Barney Kessel/Kessel Plays Standards	Ensemble rhythm combines guitar and piano with quarter note chords and syncopated eighths during the tenor sax solo, starting at 1:40. At 2:14, ensemble rhythm combines guitar and the left hand of the piano during the piano solo, using lots of offbeat chords played nicely together.

<u>title</u>	<u>album</u>	<u>comments</u>
Prelude to a Kiss	Barney Kessel/Kessel Plays Standards	Secondary melody in top voice leading during the oboe head melodies.

<u>title</u>	<u>album</u>	<u>comments</u>
I Didn't Know What Time It Was	Barney Kessel/Kessel Plays Standards	Secondary melody in top voice leading during the oboe head melodies.

<u>title</u>	<u>album</u>	<u>comments</u>
64 Bars on Wilshire Avenue	Barney Kessel/Kessel Plays Standards	Ensemble rhythm combines guitar and piano with quarter note chords and syncopated eighths during the piano and sax solos. Seems to be carefully softer during the piano solo as Barney follows the pianists left hand.

<u>title</u>	<u>album</u>	<u>comments</u>
Seven Come Eleven	Oscar Peterson/The Essential Oscar Peterson	Too bad. Really awful guitar tone. Good performance otherwise. Staccato quarter note chords during the piano solo. Sometimes the time is a little out. It must have been really difficult at the fast rate Oscar P. was playing. Still... a man's got to know his limitations.

<u>title</u>	<u>album</u>	<u>comments</u>
I'm Glad There is You	Barney Kessel/Plays for Lovers	Melds nicely with the piano with legato quarter note chords, some half notes, some eighths during the vibe and piano solos.

<u>title</u>	<u>album</u>	<u>comments</u>
My Funny Valentine	Barney Kessel/Plays for Lovers	Arpeggiated chords, “bass-mid-top” comping during flute head. Arpeggiated thirds at 2:04. Top voice-lead secondary melody at 2:17 (end of head, before solo).
<u>title</u>	<u>album</u>	<u>comments</u>
Just in Time	Barney Kessel/Let’s Cook!	Rhythmic comping based on style of pianist left hand during piano and vibe solos. Elaborates on piano comping by sustaining at the end of the bar.
<u>title</u>	<u>album</u>	<u>comments</u>
Contemporary Blues	Barney Kessel/To Swing or not to Swing	Consistent staccato quarter note chords during the sax and piano solos. During the trumpet solo, Barney combines staccato quarter notes with mirroring of the solists rhythmic themes.
<u>title</u>	<u>album</u>	<u>comments</u>
Indiana	Barney Kessel/To Swing or not to Swing	Consistent staccato quarter note chords during the sax, trumpet and piano solos.
<u>title</u>	<u>album</u>	<u>comments</u>
On a Slow Boat to China	Barney Kessel/Kessel Plays Standards	Pairs with the piano making syncopated eighth comping rhythms during the piano and tenor sax solos.
<u>title</u>	<u>album</u>	<u>comments</u>
I’ve Told Ev’ry Little Star	Sonny Rollins	Pairs with the piano making syncopated eighth comping rhythms during the tenor sax solos. Elaborates on the piano with sustain pushes.
<u>title</u>	<u>album</u>	<u>comments</u>
Yardbird Suite	Hampton Hawes!!! with Barney Kessel, Shelly Mann & Red Mitchell	Consistent, soft staccato quarter note chords during piano solo. Sustains in cadences. Syncopated hits with Oscar’s left hand in the “B” section of the head at 5:43. Sliding arpeggio tones cadencing out of the “B” section at 5:48.
<u>title</u>	<u>album</u>	<u>comments</u>
Watch What Happens	Peterson, Kessel, Niels-Henning Orsted Pederson at Ronnie Scotts 1974	Barney was sitting between the bassist and Oscar so they could watch Oscar’s left hand. Secondary melody with top voice leading in the “A” section of the head (during to sustained melody notes). Note the offbeat response with Barney’s chords to each of the last four notes of the “A” section (0:40). Staccato quarter note chords in the “B” section. Swing eighth chords during piano solo, muting on the upbeat/upstroke, except sustaining chords in cadences at the end of the section. Ending cadences with piano left hand.

<u>title</u>	<u>album</u>	<u>comments</u>
Wes' Tune	Oscar Peterson/History Of An Artist	Intro: hits on the "and after two". Backbeat (two and four) staccato quarter notes in the "A" section. Evil Ways (Santana)/Night Train (Wes Montgomery) rhythmic accent during the "B" section (0:57-1:01).

<u>title</u>	<u>album</u>	<u>comments</u>
Cheek To Cheek	Oscar Peterson/85 Essential Tracks	Consistent staccato quarter note chords during head (that's a good boy, Bernard).

<u>title</u>	<u>album</u>	<u>comments</u>
Take The "A" Train	Oscar Peterson/Plays Duke Ellington	Consistent staccato quarter note chords except three- chord offbeat hits at 1:40. Offbeat hits start the "B" section at 2:05.

Herb Ellis

<u>title</u>	<u>album</u>	<u>comments</u>
But Not For Me	Monty Alexander, Ray Brown, Herb Ellis/Triple Scoop	Ther head is a half time feel as if slow 4/4 with staccato eighth note chords, but written as 4/4. Staccato quarter note chords in the piano solo with chromatic voice leading . During the bass solo, the left hand of the piano and the guitar merge with the guitar occasionally pushing one (playing on the "and after four" and not on one). Full-band accents at 0:55 and 4:40 on the "and after two" and on four. End with full band pushes to beats 2, 3, 4 and 1.

<u>title</u>	<u>album</u>	<u>comments</u>
When Lights Are Low	Monty Alexander, Ray Brown, Herb Ellis/Triple Scoop	Moderate tempo. Guitar plays moderately staccato quarter note chords along with the bass during the head, with the bass playing half notes at the end (0:52). During the piano and solos, Herb uses moderately staccato quarter note chords with chromatic progression employing ascending diiminished and flat five substitutes descending chords.

<u>title</u>	<u>album</u>	<u>comments</u>
Have You Met Miss Jones?	Herb Ellis/Ellis in Wonderland	Moderate tempo. Moderately staccato quarter note chords. Chromatic progression employing ascending diiminished and flat five substitutes descending chords.

<u>title</u>	<u>album</u>	<u>comments</u>
Naptown Blues	Oscar Peterson/Hello Herbie	Herb uses up-tempo swing-style top-voiced chord licks to comp. Hard to come up with anything with Oscar's intensity. Not much room left. He's got the attention. But at 3:00, after Oscar just fired off his nuclear arsenal of cool harmonized licks, Herb finds a secondary melody style and starts responding. At 3:20 Herb plays a repetitive reflection. He could have done better, if he would sat back and listen to Oscar, summarizing his melody and reflecting themes back. Summarize and reflect. Keep a simple elegant core. Okay at 3:30, he's getting it. Great! Ride the wave! You got it man!

<u>title</u>	<u>album</u>	<u>comments</u>
Seven Come Eleven	Oscar Peterson/Hello Herbie	Nice chromatic secondary melody comping starting at 2:30. Ascend diminished chromatic diminished, descend chromatic flat five substitutes . More. Come on Herb, I can hear it. You can do it.
My Romance	Ron Carter Trio/ Something Else (with Kenny Barron)	In the waltz beginning of the head, Herb makes an ensemble part with Ron, where the bass note begins the figure, then two offbeat chords (“and after one” and the “and after two”) and on three. The waltz is followed by a moderate swing, walking bass 4/4, where the guitar softly supports Kenny Barron’s left hand, mostly duplicating it. Back to the waltz at 0:26. 4/4 supporting piano left hand again at 0:40. I would have liked the guitar mixed up a little louder in the piano solo starting at 0:54, where Herb supports the piano left hand again. Can’t hear it? Listen again, the guitar is in there, around 2:10, for example.
Summertime	Ron Carter Trio/Jazz, My Romance	Nice, supportive mildly staccato quarter note chords through the beginning of the head. Then, at 1:03, Herb vamps with a swing I IV I7 (like All Blues), followed by staccato quarter note chords as if with a walking bassline, against Ron’s bass solo. This walking part is paralleled by the piano left hand. After a descending chromatic chordal figure in the piano against a pedal bass figure, the piano solo is accompanied with walking bass and mildly staccato quarter note chords to parallel it and add harmony.
Sweet Lorraine	Ron Carter Trio/ Something Else (with Kenny Barron)	Mildly staccato quarter note chords, chromaticized mostly with descending flat five substitutes .
All The Things You Are	Herb Ellis/The Jazz Masters or Jazz Guitar Legends (Ray Brown-bass, Serge Ermoll-piano)	Guitar and left hand piano largely duplicating, with typical jazz piano rest pushes (playing on the “ands”). The guitar adds nice color. At 2:49, the guitar starts to add some more consecutive eighth syncopation, thematically.
Au Privave	Herb Ellis/The Jazz Masters or Jazz Guitar Legends (Ray Brown-bass, Serge Ermoll-piano)	Guitar and left hand piano largely duplicating, with typical jazz piano rest pushes. At 1:04, Herb adds a little secondary melody in octaves. Mildly staccato quarter notes during the bass solo that follows, with ascending diminished and descending flat five substitutes . Thematic swing-style licks in octaves during the piano solo, like Charlie Christian style played by Wes.
Autumn Leaves	Herb Ellis/The Jazz Masters or Jazz Guitar Legends (Ray Brown-bass, Serge Ermoll-piano)	At 2:48, Herb uses a staccato “Charleston” theme for his comping, with main accents on one and the “and after two”.

<u>title</u>	<u>album</u>	<u>comments</u>
I Love You	Herb Ellis/The Jazz Masters or Jazz Guitar Legends (Ray Brown-bass, Serge Ermoll-piano)	The tempo is fairly fast, about 210 BPM. Ray Brown begins the head with this bass figure, rhythmically duplicated in chords by the guitar and piano. The piano makes an exception to “cap off” the phrase in the fourth bar, shown with stems up:

At 0:21, the bass starts fast walking bass. Against it, the piano and guitar setup this four-bar theme:

In the piano solo, the left hand piano and guitar feature offbeat accents. In the beginning of the sax solo, lay out, letting the bass and drums carry it. As the sax solo continues, build the piano and left hand team gradually resume the intensity of their offbeat accents.

<u>title</u>	<u>album</u>	<u>comments</u>
Triste	Herb Ellis/The Jazz Masters or Jazz Guitar Legends (Ray Brown-bass, Serge Ermoll-piano)	Ray Brown sets up a two-bar bass theme (stems down) and Herb slyly counters with a pairs of eighth note chords (stems up) using an upward chromatic slur.

The idea is abstracted a little.

Many tunes have big open spaces, begging for an obligato response. About one of every three or four songs have this. These include Autumn Leaves, All the Things You Are, Black Orpheus, Blue Bossa, Cantelope Island, Caravan, Footprints, Golden Lady, Groovin' High, Have You Met Miss Jones?, How High The Moon, Meditation, Misty, Road Song, Song for My Father, Summertime, The Way You Look Tonight and You Are the Sunshine of My Life.

With tunes like Triste, Autumn Leaves, Caravan, In a Mellow Tone, you may wonder if the composer intended improvisation in the open spaces. With others like How Insensitive, you would want to be careful not to clutter.

So.....Herb took advantage of the space and played a secondary melody in the open spaces. This could have been chordal. If it was Barney Kessel or Oscar Peterson in that role, it probably would have been a top-voiced chordal secondary melody.

In the piano and flute solos, Herb reflects off the sidestick snare and plays a samba rhythmic theme. During the flute solo, the left hand of the piano, the sidestick snare and the guitar work together and are largely the same. If it was Oscar Peterson on piano, I doubt he would have laid out with his left hand during the piano solo. I like it both ways. I can enjoy Oscar's domination or Serge's team playing, either way.

Joe Pass

<u>title</u>	<u>album</u>	<u>comments</u>
Joy Spring	Joy Spring or Joe Pass/Capitol Vaults Jazz Series	Starting at 4:42, guitar and piano just comp together. Was that the plan. They're playing well together, but was that the plan? It's pretty uneventful until the piano solo. During the piano solo at 5:25 Joe cops hits with the piano players left hand.

<u>title</u>	<u>album</u>	<u>comments</u>
Jive At Five	Count Basie/Kansas City Five	Staccato quarter notes with some pushes (especially to “1”), sometimes accenting the backbeat (two and four).
One o’ Clock Jump	Count Basie/Kansas City Five	Staccato quarter notes with some pushes (especially to “1” and “3”), sometimes accenting the backbeat (two and four). Duplicating alot of Count Basie’s (pano) left hand during the Milt Jackson (vibes).
Cakewalk	Oscar Peterson/The Quartet Live, featuring Joe Pass	Staccato quarter notes with some pushes (especially to “1”), sometimes accenting the backbeat (two and four). In the “B” section at 0:40, Oscar uses alot of eighth rest-pushes (playing on the “and” before the beat, then not on the beat). Here’s a typical example:
		
After a minute (at 1:41) Joe joins in and mimics.		
Caravan	Oscar Peterson, Joe Pass, Ray Brown/The Giants	During the piano solo, Joe comps at 360 BPM staccato quarter note chords briefly, then plays little flurries of eighths with down-up strumming. Courageous!
I’m Getting Sentimental over You	Oscar Peterson, Joe Pass, Ray Brown/The Giants	Moderately staccato quarter note chords during the piano solos. Some chromatic downward flat five substitutes , but mostly straight-forward voice leading with a single chord every two or four beats.
Who Cares	Oscar Peterson, Joe Pass, Ray Brown/The Giants	Syncopated eighth comping during the piano solo with some downward chromatic flat five substitutes (especially bII on beat four to target on beat one). Piano and guitar (mostly just guitar) play double whole note chords and whole note chords together during the bass solo.

Wes Montgomery

<u>title</u>	<u>album</u>	<u>comments</u>
Au Privave	Au Privave*guitar+piano-Wes Montgomery, Cannonball Adderley (alto), Ray Brown. Victor Feldman (piano/vibes), Louis Hayes (drms)	Wes locks tightly to duplicating the snare rhythms during the first alto sax solos (1:05-1:50) with seventh and ninth chords, employing chromatic descending flat five substitutes . During the bass solo, he uses two and three note chords with conservative voice leading . In the piano solo, he used an ostinato (repeating), pair of eighth note octaves as a pedal point followed by basic chords.

<u>title</u>	<u>album</u>	<u>comments</u>
Billie's Bounce	The Best of Wes Montgomery	Can't hear Wes. He appears to have laid out. It would have be awesome if he had copied the left hand piano and added occasional harmonies.

<u>title</u>	<u>album</u>	<u>comments</u>
Baubles, Bangles And Beads	The Best of Wes Montgomery	During the piano and vibes solos (1:06-2:02), syncopated, staccato eighths, about three or four chords to the bar, mirroring the left hand piano. Alone with the vibes at 2:28, using whole note chords. The piano joins in for the ending turnaound. No bass nor drums durig the ending vibe solo.

<u>title</u>	<u>album</u>	<u>comments</u>
Hymn for Carl	The Best of Wes Montgomery	Wes starts comping during the tenor sax solo at 0:57 with accents on the "and after one" and on three, along with the left hand of the piano. Then he plays whole note chords pushing one (on the "and after four"), while the piano left hand plays more busy syncopated eighths. At 1:24, he resumes a couple of offbeats per bar, then back to whole note chords (1:29), this pattern repeats with the chord progression.

<u>title</u>	<u>album</u>	<u>comments</u>
Full House	Full House (live at Tsubo in Berkeley, California)	Beginning at 3:56 and through the sax and piano solos, Wes syncopates the fast waltz with chords on the upbeats, relecting on the left hand piano and snare. Sections end with sustasined dotted half note chords.

<u>title</u>	<u>album</u>	<u>comments</u>
Sundown	Wes Montgomery/ Impressions-The Verve Jazz Sides	At 2:47, Wes mimics the left and piano with syncopated eighth note chords. At 3:12, he uses common tone flat three on top. At 4:47, he uses upward chromatic diminished voice leading to harmonize with the horn section.

<u>title</u>	<u>album</u>	<u>comments</u>
Unit 7	Wes Montgomery/ Impressions-The Verve Jazz Sides	<p>To comp solos, Wes composed an accompaniment, rather than improvising. He used m7 to m6 in eighth note chords on one and the "and after two", with a single eighth note fifth-of-chord pickup on the "and after four". He made a 12 bar blues variation with m7 to m6 as follows:</p> <p>Gm, Gm, Gm, Gm (four bars so far), Cm, Cm, Gm, Bbm (that's four more bars)</p> <p>Ab (ma7 to 6), Abm, Bm7b5 to C7 (unique), Dm. On "and four and", he cadenced back in with Am7 Abm7 Gm7. Then he pushes one (on the "and after four") with six whole-note chords for most of his bridge (Gm7, C9, Fma7, A7b9, Dm7, G7), until ending with a four-chord cadence using the "and after one" and on three for Bb7, A7, Ab7, G7.</p> <p>Then on to a colorful modern swing blues in C, using a swing-sounding sixth lick on the I and IV chords with a IIm9 bII7#9 cadence. Each chord is played on "1", followed by the lick.</p> <p>This is innovative, but also predictable and not so much improvised comping.</p>

<u>title</u>	<u>album</u>	<u>comments</u>
Four on Six	Wes Montgomery/ Impressions-The Verve Jazz Sides	At 2:30, the piano solo starts with no guitar comping until 3:02, when he comes in with a few staccato hits on offbeats (starting with the Charleston “one” and the “and after two”) and pairs of chords with flat five substitutes during the cadences. At 4:40 he plays fast pairs of chords with lower chromatic embellishment (coming in from a half step below) and various versions of the chord to provide top voice leading (root on top, flat third on top, etc.). At 4:47, he ends with a fast flurry of triplets, most of which is just octaves.
<u>title</u>	<u>album</u>	<u>comments</u>
Four on Six (live)	Wes Montgomery/ Impressions-The Verve Jazz Sides	Starting about 3:20 on this live recording, you can hear Wes again combining octaves with top voice-lead chords to play fast flurries. This is more of a solo, but its elements can be used in comping.
<u>title</u>	<u>album</u>	<u>comments</u>
No Blues	Wes Montgomery/ Smokin’ at the Half Hote	Around 6:40-7:18, Wes comps the piano solo with staccato common tone chords.
<u>title</u>	<u>album</u>	<u>comments</u>
Oh, You Crazy Moon	Wes Montgomery/ Smokin’ at the Half Hote	Tremolo (amp effect) chords! Wes uses sustained, mostly half note chords (2:36) during the piano solo. Note the arpeggiated cadences at 3:15.
<u>title</u>	<u>album</u>	<u>comments</u>
One for My Baby	The Montgomery Brothers/Groove Yard or So Much Guitar!	Quarter and half note sustained chords during the piano solos on the B section (first at 2:16). He plays more staccato stabs with offbeat chords during the piano solo at 5:54.
<u>title</u>	<u>album</u>	<u>comments</u>
Cariba	Full House (live at Tsubo in Berkeley, California)	During the piano and sax solos (starting at 1:38), Wes plays offbeat, staccato chords reflecting on the drummer’s sidestick rhythm. At 4:06, during the sax solo, he reflects upon the piano left hand as well as the sidestick for rhythm.
<u>title</u>	<u>album</u>	<u>comments</u>
Freddie Freeloader	Portrait of Wes	Organ, not piano (more sustain than a piano). During the organ solo, Wes pairs with the snare for rhythm. Most of his chords are staccato, but he occasionally ends cadences with a sustained chord (nice effect).
<u>title</u>	<u>album</u>	<u>comments</u>
Here’s that Rainy Day	from Jazz Casuals, Ralph Gleason TV show	During the piano solo, Wes pairs with the snare for rhythm with staccato chords.

Pat Martino

<u>title</u>	<u>album</u>	<u>comments</u>
Blue in Green	Pat Martino/Mission Accomplished	Pat comps with staccato quarter note chords, generally duplicating the left hand piano, sometimes laying out, sometimes continuing when the piano sustains. I would have liked more duplication of the piano left hand on the guitar.

<u>title</u>	<u>album</u>	<u>comments</u>
Sugar	70's Jazz Pioneers	Pat comps with staccato quarter note chords, generally duplicating the left hand organ.

<u>title</u>	<u>album</u>	<u>comments</u>
Sunny	Pat Martino/Live!	During the piano solo (5:50), Pat comps generally with quarter and eighth note chords, based on the typical rhythmic theme for the song:

Starting at 6:54, the piano soloist used the one-bar “rhythmic theme 1” (below) four times, then the two-bar “rhythmic theme 2” a couple of times. Pat played along cautiously, doing a good job of duplicating. During “rhythmic theme 2,” Pat was probably not sure where the accents were going to be placed, so went to playing continuous eighth note chords, also serving to build momentum to the end of the phrase.

George Benson

<u>title</u>	<u>album</u>	<u>comments</u>
Hipping the Hop	from Absolutely Live video	Awesome comping with Joe Sample's piano solo at 2:12. Joe is playing two or three chords a bar and George is elaborating with colorful chords and some octaves, like Wes.

<u>title</u>	<u>album</u>	<u>comments</u>
All Blues	George Benson/Witchcraft	At 6:30 George comps responsively to the snare and left hand piano: pushing two (on the “and after one”) with the snare and piano, reflects triplets from the piano at 7:30 and 7:53.

<u>title</u>	<u>album</u>	<u>comments</u>
Love for Sale	George Benson/ Witchcraft	George tends to use rhythmic themes in his comping. His comping with piano solo starts at 6:58 with this four-bar phrase:
		
		Starting at 7:28. this two-bar phrase:
		

<u>title</u>	<u>album</u>	<u>comments</u>
Oleo	George Benson/Jazz on A Sunday Afternoon, vol. 2 (Cafe Caribe 1973) or George Benson Quartet Live at Casa Caribe Club	Yeah, you'll need butter, this is blistering.! Since this tune is played at 350 BPM, George comps (starting at 4:05) at the half note level, playing chords mainly on beats one and three, occasionally on all four beats. The chord changes four two-bar sets of "rhythm changes" (I VI IIm V), except the third set of two bars is Vm7 I7 IVm7 bVII9 (or IVm6). The piano player is generally doing a simpler version of the same thing. They create syncopation by briefly sustaining on beats two or four. George adds occasional licks.

<u>title</u>	<u>album</u>	<u>comments</u>
There Will Never be Another You	George Benson/Jazz on A Sunday Afternoon, vol. 2 (Cafe Caribe 1973) or George Benson Quartet Live at Casa Caribe Club	During the piano solo at about four through six minutes, George comps with a lot of attention to the pianists left hand. Here is a typical rhythm:
		
		Listen for cool upward chromatic passages.

<u>title</u>	<u>album</u>	<u>comments</u>
Witchcraft	George Benson/Jazz on A Sunday Afternoon, vol. 2 (Cafe Caribe 1973) or George Benson Quartet Live at Casa Caribe Club	George improvises a funky comp style, closely following the pianists left hand and the snare. Nice top-voice leading and chord colors. Here is a typical four-bar example:
		

<u>title</u>	<u>album</u>	<u>comments</u>
All the Things You Are	George Benson/Jazz on A Sunday Afternoon, vol. 2 (Cafe Caribe 1973) or George Benson Quartet Live at Casa Caribe Club	The piano solo starts at four minutes. George comes in around 4:50. Generally the guitar and left hand piano are played well together, but just after George starts around 5:00, a funny thing happens (its during the last eight bars of the chord progression). George and the pianist are pushing different beats (see below). To me, the result is a little muddled. Shortly afterward, they get back in sync.

<u>title</u>	<u>album</u>	<u>comments</u>
The Cooker	The George Benson Cookbook	Though this cut uses organ, not piano, the organ chords are generally short and similar in duration to those on piano. During the sax solo (starts at 2:43, the organ and guitar play funky sixteenth syncopations that are similar enough to work:

<u>title</u>	<u>album</u>	<u>comments</u>
Take Five	Bad Benson (Philip Upchurch, rhythm guitar)	Like a Wes Montgomery comping part, this Philip Upchurch comping is very regular and guaranteed to fit, but not improvised. It may be a little monotonous, but who's listening to Philip?

Russell Malone

<u>title</u>	<u>album</u>	<u>comments</u>
Jingles	live at Umbria Jazz 1999 with Benny Green (piano), Christian McBride (bass)	Russell lays out through Benny's piano solo. Sometimes that's best.

<u>title</u>	<u>album</u>	<u>comments</u>
I Can't Get Started	Ron Carter Trio/I Can't Get Started	During the head, the piano plays the melody and Russell arpeggiates chords. In the long bass solo (hey, it's Ron Carter!) that follows he continues arpeggiating for a while, then goes to legato quarter note chords (about 3/4 of a beat each) with common tone, scalar and chromatic top voice leading .

<u>title</u>	<u>album</u>	<u>comments</u>
Autumn Leaves	Ron Carter Trio-youtube	After playing the “A” section of the head with Ron, Russell plays staccato quarter note chords with scalar top voice leading through the “B” section. Back to melody and runs to begin the recap of the “A” section, followed by whole note chords in a newly composed section the trio added to the song. The piano solo follows the head with Russell playing quarter notes staccato chords. He uses alot of chromatic voice leading here, caused by flat five substitutes . A guitar solo follows, then a bass solo where Russell lays out. Russell plays melody in the ending head, rather than comping.

<u>title</u>	<u>album</u>	<u>comments</u>
There Will Never be Another You	Billy Taylor Trio (Billy Taylor piano)-youtube	The piano player is leaving it wide open for Russell by playing predominantly whole-note chords. This example of bars 17-20 of the piano solo show Russell’s rhythmic themes allowed by all the space.

Ron Eschete (“Esh-tay”)

<u>title</u>	<u>album</u>	<u>comments</u>
This Can’t be Love	Gene Harris Quartet/ Listen Here!	Ron comes in section “B” of the head (bars 9-12, at 0:12) with a complex rhythm, but plays it tightly against the piano (below). The rhythms he uses smartly predict the rhythms played with the piano in bars 5-8 of section “B”:

Ron ends the head with a bomba/cha cha combination, played against a quarter-note piano part.

Ron generally uses half note chords in comping the piano solo. He’s wise to play it safe by making “three” his first choice for pushes (the “and after two”). Like a good drummer on his snare, Ron is very attentive and echoes back most repeated phrases that Gene plays by repeating Gene’s rhythmic theme. Ron has probably worked out main ideas of the scalar and chromatic [voice leading](#) he is using.

<u>title</u>	<u>album</u>	<u>comments</u>
This Masquerade	Gene Harris Quartet/ Listen Here!	Standard staccato quarters during the head. Ron slices just before the bass player’s notes on the beat, playing early by only 5-10%. Listen ot the “B” section, starting at 1:19. Just that slice is worth the price of admission.

<u>title</u>	<u>album</u>	<u>comments</u>
Blue Bossa	Gene Harris Quartet/ Black and Blue	Check out the guitar and left hand piano action on the first nine bars of the head (starting at 0:25):

The image displays two staves of musical notation for the first nine bars of the head of 'Blue Bossa'. The top staff is labeled 'guitar' and the bottom staff is labeled 'piano'. Both staves are in 4/4 time. The guitar part features a melodic line with eighth and quarter notes, often beamed together. The piano part provides a harmonic accompaniment with chords and single notes, including some grace notes. The notation is in treble clef.

This seems like an effective compromise between pre-composed comping parts like Wes Montgomery's popular recordings and improvised comping. I suspect Ron worked out ideas in a sketch manner and wisely left much of it to improvisation for a "live feel". Effective approach.

Quartal and Quintal Harmony

- **Six-String Major Scale-Tone Quartal Chords**
- **Five-String And Major Scale-Tone Quintal Chords**
- **Quartal and Quintal Triads**
- **Modal Stacked Fourths**
- **Modal Stacked Fifths**
- **Minor 6/9 Quartal Stack Exceptions**
- **Quartal Stacks on All Seven Major Scale Tones**

SIX-STRING MAJOR SCALE-TONE QUARTAL CHORDS

The major scale can be ordered by number in perfect fourths as 7-3-6-2-5-1-4. In letters, this is B-3-A-D-G-C-F in the key of C. For all keys, 7-3-6-2-4-1-4 would be seven consecutive letters in the series B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb, starting the seventh step of the desired scale.

Key

C# B#-E#-A#-D#-G#-C#-F#

F# E#-A#-D#-G#-C#-F#-B

B A#-D#-G#-C#-F#-B-E

E D#-G#-C#-F#-B-E-A

A G#-C#-F#-B-E-A-D

D C#-F#-B-E-A-D-G

G F#-B-E-A-D-G-C

C B-E-A-D-G-C-F

F E-A-D-G-C-F-Bb

Bb A-D-G-C-F-Bb-Eb

Eb D-G-C-F-Bb-Eb-Ab

Ab G-C-F-Bb-Eb-Ab-Db

Db C-F-Bb-Eb-Ab-Db-Gb

Gb F-Bb-Eb-Ab-Db-Gb-Cb

Cb Bb-Eb-Ab-Db-Gb-Cb-Fb

Perfect-Fourth Stacks on Six Strings

Perfect fourths can be fretted on six strings as 7-3-6-2-5-1 or 3-6-2-5-1-4, as shown below.

FIVE-STRING MAJOR SCALE-TONE QUINTAL CHORDS

These four quintal chords can each be sustained at once:

E6/9 | F6/9 | G6/9 | A6/9 |

QUARTAL AND QUINTAL TRIADS

Major Scale-Tone Quartal and Quintal Triads

The I major pentatonic and the VI minor pentatonic share the same notes, 1-2-3-5-6 of a major scale. Add a tone a fourth above and below each tone of the I major/VI minor pentatonic and produce quartal triads. Or, or add a tone a fifth above and below each tone of the I major/VI minor pentatonic and produce quintal triads. For C major, this creates the chords below. Each triad has the *same* notes whether it is a I major/VI minor pentatonic tone with a fourth above and a fourth below or if it is a I major/VI minor pentatonic tone with a fifth above and a fifth below.

nr = no root, n3 = no third, n5 = no fifth

scale tone number	1	2	3	5	6
letter in C major	C	D	E	G	A
quartal/quintal triad numbered tones of parent C major	5-1-4	6-2-5	7-3-6	2-5-1	3-6-2
quartal/quintal triad lettered tones of parent C major	G-C-F	A-D-G	B-E-A	D-G-C	E-A-D
I major chord names	I sus.4	I6/9 nr,n3	I ma7/6 nrn5	I sus2	I6/9 nrn6=5

exotic quartal and quintal voicings

Chords can be approached from a half step above or flatted to produce exotic or bluesy effects. The effect is bluesy or eastern/exotic, depending on the mode. In major, for example, chords a half steps above 3 and 6 are bluesy; and half steps above 1, 2 and 5 are eastern/exotic.

Melodic Minor Scale-Tone Quartal and Quintal Triads

Harmonic Minor Scale-Tone Quartal and Quintal Triads

Harmonic Major Scale-Tone Quartal and Quintal Triads

MODAL STACKED FOURTHS

fourths in the major scale

Major scale fourths can be memorized with the fourths diagrams below. The “stacks” or sequences of fourths are connected with lines. Note that each pair of notes in the series of fourths “7-3-6-2-5-1-4” are on the same fret, except from the third to second string, the note on the second string is one fret closer to the guitar body. Also note that the interval from “4” to “7” is an augmented fourth, making “7” one fret higher on the next smaller string. When “4” is on the third string, both of these exceptions come into play and “7” is *two* frets toward the body of the guitar from “4”.

fourths in major scale sharp five

Fingerings for fourths in major sharp five are a modification of [fourths in the major scale](#). The “stacks” or sequences of fourths are connected with lines. Placing the tone center on “6” of major sharp five scale makes harmonic minor in the key of “6”. Note that it is *diminished fourth* from “#5” up a scale tone fourth to “1”, making a major third. Also note that “2” to “#5” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “#5”.

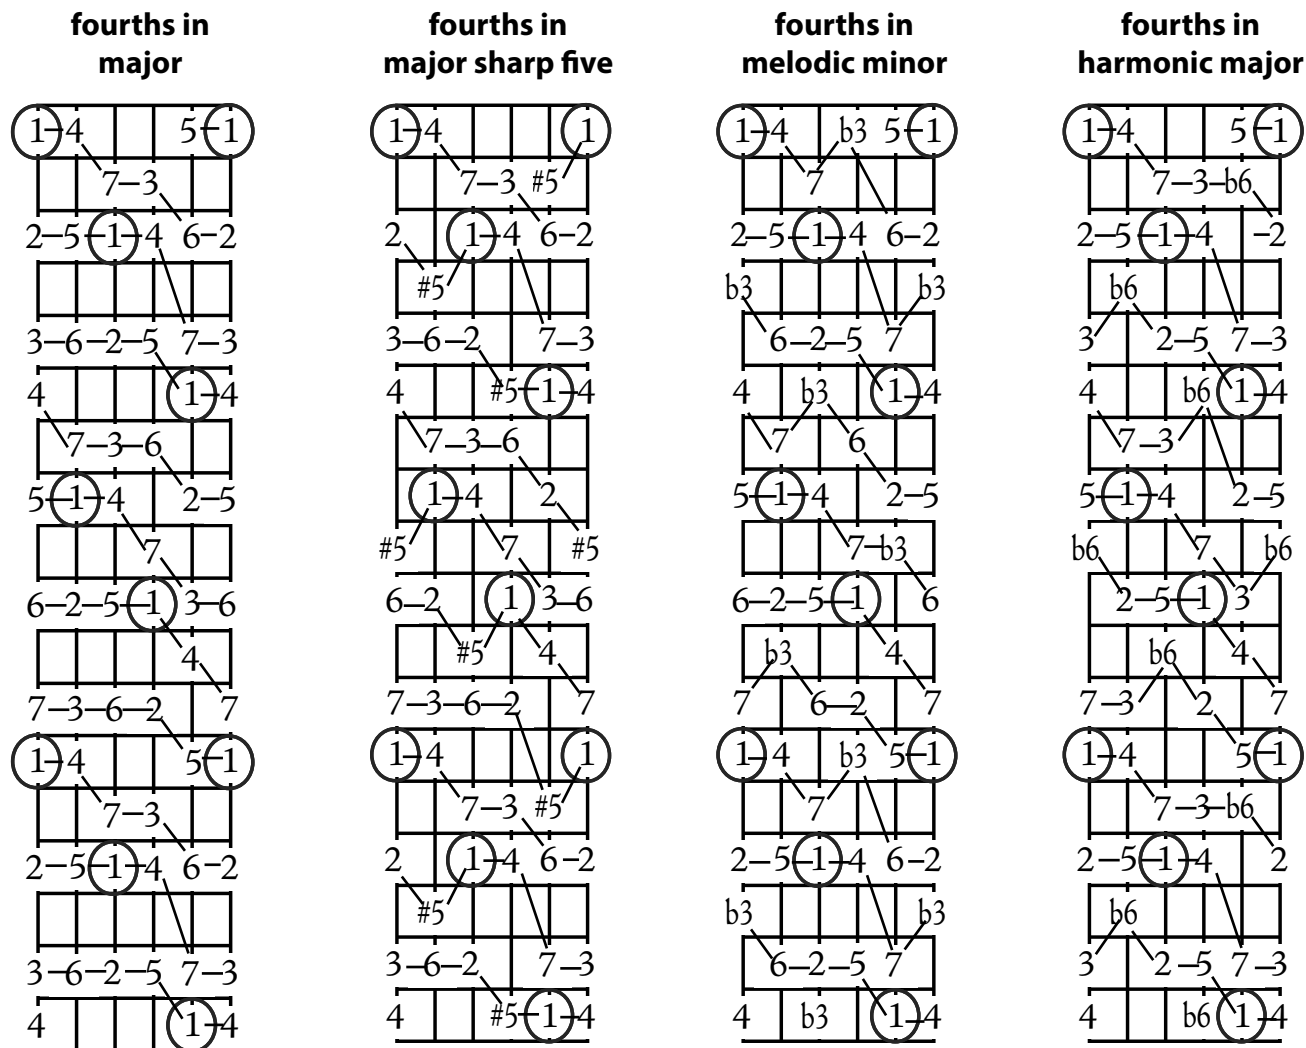

fourths in melodic minor

Fingerings for fourths in melodic minor are a modification of [fourths in the major scale](#)). Note that it is *diminished fourth* from “7” up a scale tone fourth to “b3”, making a major third. Also note that “b3” to “6” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “b3”.

fourths in harmonic major

Fingerings for fourths harmonic major are a modification of [fourths in the major scale](#). The “stacks” or sequences of fourths are connected with lines. Note that it is *diminished fourth* from “3” up a scale tone

fourths in major	fourths in major sharp five	fourths in melodic minor	fourths in harmonic major
C D E F G A B C	C D# E F G A B C	C D E F# G A B C	C D E F G A# B C

MODAL STACKED FIFTHS

fifths in the major scale

Major scale fifths can be memorized with the fifths diagrams below. The “stacks” or sequences of fifths are connected with “back slash” diagonal lines. Note that each pair of notes in the series of fifths “4-1-5-2-6-3-7” form a diagonal line that spans two frets, except from the third to second string, where the diagonal line spans *three* frets. Also note that the exceptional interval from “7” to “4” is an diminished fifth, where the diagonal line spans *one* fret. When “7” is on the third string, both of these exceptions come into play and “4” is *two* frets toward the body of the guitar from “7”.

fifths in major scale sharp five

Fingerings for fifths in major sharp five are a modification of [fifths in the major scale](#). The “stacks” or sequences of fourths are connected with lines. Placing the tone center on “6” of major sharp five scale makes harmonic minor in the key of “6”.

Sharping the fifth modifies two of the fifth intervals: “1” to “#5” is an augmented fifth and “#5” to “2” is a diminished fifth. As with the major scale, “7” to “4” is a diminished fifth.

fifths in melodic minor (ascending version)

Fingerings for fifths in melodic minor are a modification of [fifths in the major scale](#). Melodic minor is a major scale with a flatted third. Flatting the third modifies two of the fifth intervals: “6” to “b3” is a diminished fifth and “b3” to “7” is an augmented fifth. As with the major scale, “7” to “4” is a diminished fifth.

fifths in harmonic major

Fingerings for fifths in harmonic major are a modification of [fifths in the major scale](#). Harmonic major is a major scale with a flatted sixth. Flatting the sixth modifies two of the fifth intervals: “2” to “b6” is a diminished fifth and “b6” to “3” is an augmented fifth. As with the major scale, “7” to “4” is a diminished fifth.

MINOR 6/9 PENTATONIC QUARTAL STACK EXCEPTIONS

Three-note chords shown in the rows of diagrams below each are built with the preference of stacked fourths. They are the 4-7-3-6-2 part of the 7-3-6-2-5-1-4 cycle of fourths shown below. 4-7-3-6-2 are the parent scale tones of IIm6/9.v

three-note m6/9 quartal fingerings by string set (with exceptions)

These are numbered below by parent scale. They are all part of V13 no root, no 11 and IIm6/9. IIm6/9 is a chord or a pentatonic scale. It is preferred to build the “stacks” of three tones ascending in fourths, but parent scale tones “1” or “5” are not allowed, in order to preserve the pure IIm6/9 chord color. Where the next tone up a fourth would be “1” or “5”, ascend a third instead.

6-2-5 would be fourths, but since “5” is not allowed, 6-2-4 is used, ascending an third from 2 to 4. 2-5-1 would be three notes ascending in fourths, but since “1” is not allowed, 2-4-7 is used instead. This substitutes “4”, a third above “2”, since “5” isn’t allowed. Then it continues from “4” up a fourth to “7”.

They can be used to build melodic structures that adhere to one of those chord sounds. Add one or both of the remaining notes of IIm6/9 pentatonic

	IIm	IIIsus4	VII dim.	VIIsus4	VIIb5sus4
string set 3-2-1					
string set 4-3-2					
string set 5-4-3					
string set 6-5-4					

three-note m6/9 quartal fingerings with neighbor m6/9 notes in gray

Notes in black are the three-note quartal stacks (with exceptions). Gray notes complete the IIIm6/9.

	IIIm	IIIsus4	VII dim.	VIIsus4	VIIb5sus4
string set 3-2-1					
string set 4-3-2					
string set 5-4-3

CADENCE AND VOICE LEADING DEFINED

See the chapter [Summary of Chord Progression Types with Improv/Voice Leading and Cadences](#).

A harmonic cadence is a familiar short chord progression (around two or three chords) that is known to establish a chord as a key by sound. We have heard the dominant chord (V or V7 type) so often before the tonic (I or Im type) that we have an automatic association with the tonic (I) being the key. The cadence from V to I is called the *authentic cadence*. This succession uses perfect fourths.

The entire sequence of perfect fourths in the major scale is VII-III-VI-II-V-I-IV (7-3-6-2-5-1-4). In the unaltered major scale, the triad versions of these chords are VII diminished-III_m-VI_m-II_m-V-I-IV. Notice the consecutive successions of three minor chords (III_m-VI_m-II_m) and three major chords (V-I-IV). The seventh chord qualities of these chords are VII_m7b5-III_m7-VI_m7-II_m7-V7-Ima7-IVma7.

Since V is known to lead to I, II can also lead to V, since it is the “V of V”. This leads to the chord progression II-V-I, which is the most common three chord cadence.

In establishing the key on VI, we precede it with III, so as to go up a fourth, as with V to I. To make the progression stronger, III is commonly changed to major if a triad or to a dominant seventh. VII dim-III-VI_m or VII_m7b5-III7-VI_m has become the most common minor cadence in establishing VI_m as the key. See the chapter [Secondary Dominant](#).

Voice leading is the creative design of voices in chords, treating the chords as an ensemble, made of voices. The succession of all of the top notes of a series of chords creates the top voice, commonly called the soprano. The succession of all of the bottom notes of a series of chords creates the bottom voice, commonly called the bass. With four voices, the next-to-top voice is called the alto and the next to bottom voice is the tenor. So, a series of chords can be thought of as a collection of voices or parts.

Characteristics of Voice Movement

retain common tones

It is preferred that notes are retained (don't change from chord to chord), when possible. This makes less work for the listener and allows the listener to focus on other important parts of a composition.

move by small intervals

It is also preferred that when notes cannot be retained, they change by small intervals, making it easier for the listener. An exception is moving all voices up on the same chord, which is easy for the listener to follow.

voiced chords versus traditional counterpoint

The type of voice leading discussed here is “voiced chords”, where all voices play in rhythmic unison (called *first species counterpoint*). Voiced chords would have the same number of notes in each chord, or at least a similar number of notes. In the other four species of traditional counterpoint, voices generally occur in rhythmic unison, but non-chordal tones also pass between the “stacked” chord tones.

Guitar Comping in Ensembles Uses Predominantly Top Voice Leading

top and bottom are most noticed

In time-based entertainment, like plays, music and public speaking, the audience remembers the beginning and end best. Likewise, listeners are most aware of musical parts at the top and bottom of the range of audible pitch. Those highest and lowest parts of an arrangement tend to stand out for the listener.

Guitarists can often represent the upper range of an arrangement, but in an ensemble (band or orchestra), the bass player (or other bass instrument like a keyboard) will grab the attention in the low range. This leaves the upper range for the guitarist.

Given the reasons mentioned above, guitarists playing in an ensemble should concentrate on making design in the sequence of highest notes from chord to chord, which could be called *top voice leading*.

Emulating the Melody in 7-3-6-2-5-1-4 Song Examples

core melodic tones

[Core melodic tones](#) are those that are both in the scale or arpeggio you are using in improv *and* in the current chord. They can also be called Duality Tones, which you can read about in [Core Melody Built with Duality Tones](#).

emulate the head during the solo

It is common that an improviser thinks the head melody while improvising on the same changes as the head. In doing this, you can analyze the most important notes in the head melody and use them as a basis of both comping and soloing. Things will be moving by quickly when you are improvising so the notes you feature that relate to the head melody should have a simple basis. Core melodic tones are very effective in doing this.

In the examples, below, I'm featuring one core melody tone for each four bars. Your awareness of common tone voice is instrumental (pun intended) in this. First play these changes with common tone top voice leading, then emulate the common tone in soloing. You can also use the mass of notes in each chord as a template of important notes for soloing in the same fretboard area.

The Way You Look Tonight, bars 1-4

During bars one through four of the head melody (beginning at section A), "two" of the key is prominent ("G" in the key of "F"). It starts bar three and is all of bar four. Since it can work as a common tone through all the chords in bars one through four, I'm using it.

The Way You Look Tonight, bars 5-8

"Three" ("A" in the key of "F") could be used for bars five and six. "Four" works for bars seven and eight, since "3" would clash with the melody note on "4" in each bar 7 and 8.

the diminished phenomenon allowing flat nine in the bass

In bar six, I used D7b9 (VI7b9 in the key of "F") instead of D7 to be a little more dramatic and use a harmonic minor V type chord for the key of G minor, the next chord (Gm in IIm of the key of "F", for bar 6). D7b9 has "b9" (of "D") in the bass. Generally, we don't use ninths in the bass, since they imply some other root than what we intend (usually implying the bass note as a root). When a chord has a diminished seventh subset though, "b9" can be in the bass. D7b9 no root is F#dim7 = Adim7 = C dim7 = D#dim7. Since diminished seventh chords are constructed with a serial (repeating) pattern of all minor thirds, they are easy for the listener to imagine the notes continue above and below the sounding chord. To experience this, play a diminished seventh chord in the middle of a piano and gradually extended it above and below in minor thirds. You'll see that you can easily "hear" the next note before playing it.

The Way You Look Tonight, bars 9-16

Top voice “1” (“F” in the key of “F”) works well for bars 9-16. It is the only melody note in bars 9-10 and 13 of the A section head. There is no melody in bars 14-16. “2” (“G” in the key of “F”) would work well on bars 11-2, but I wanted to keep it simple, so I’ll stick with top voice “1”.

The Way You Look Tonight, bars 17-20 and 25-28

“Section B in is the key of “b3”. If section “A” is in the key of “F”, section “B” is in “Ab” (the “b3” of “F”). Bars 17-20 of section B (continuing the numbering from section A) obviously needs to use common tone “3” (“3” of “Ab”, which is “C”). It’s the only note in bars 17-18, it starts bar 19 and half of of the notes in bars 17-20 are “3”. Note that F7b9 no root is Adim7.

“5” (“Eb” in the key of “Ab”) is the only note in bars 25-26, it starts bar 27 and over half of of the notes in bars 25-28 are “5”. Instead of actually using “5” (“Eb”), lets use “3” again, which is a third below “5” and will harmonize with it. This allows us to repeat what we played for 21-24.

The Way You Look Tonight, bars 21-24

Given that I want to use “3” (“C”) before and after 21-24 (in 17-20 and 25-28), I’m using the nearby tone, “2” (“Bb”). It starts bar 21 and is a basic part of each of the last two chords. “6” (“F”) could have been a good choice otherwise, but would skip too far from the common tone “3” used before and after.

The Way You Look Tonight, bars 29-32

In 29-32, I’m using a scalar top voice leading. After starting with “3” (“C”), I top voice-lead with “7, 1, 2, #1” (G, Ab, Bb, A in Ab). This voice-leads back to the “2” top voice (“G”) in bar one. The last two chords could be thought in the original key (not changing the notes, just a different point of view), where the top-voice tones would be “4” and “3” of the original key (“Bb” for the Gm7 chord and “A” for the C13).

Autumn Leaves, Preview Scalar Voice Leading

Swing Eighths

The score is for a piece titled "Autumn Leaves, Preview Scalar Voice Leading" in 4/4 time, Swing Eighths. It consists of five systems of music, each with a treble and bass staff and a tablature staff. Chords are indicated above the staff, and fingerings are shown in the tablature.

System 1: Chords: Cm7, Cm7, B7, Bbmaj7, Eb6, Ebmaj7. Tablature: 8, 11, 10, 8, 6, 8, 10, 8, 10, 4, 7, 5, 6, 5, 8, 6.

System 2: Chords: Am7(b5), Am7/11, Ab7, Gm7, F#o7, Gm7, Gm11. Tablature: 8, 6, 8, 3, 5, 6, 4, 3, 1, 5, 4, 3, 6, 5, 3, 3.

System 3: Chords: Am7(b5), D7, Gm7. Tablature: 8, 6, 8, 5, 5, 5, 4, 6, 8, 8, 7, 5, 5, 3, 3, 3.

System 4: Chords: Cm7, F7, Bbmaj7, Ebmaj7. Tablature: 4, 3, 7, 5, 5, 3, 2, 1, 1, 7, 8, 9, 10, 8, 12, 10, 8, 7, 12, 10, 8, 7, 11, 10, 8, 6.

System 5: Chords: Am7(b5), D7, Gm7, Gb7, Fm11, E7(b5). Tablature: 8, 6, 8, 7, 7, 10, 10, 6, 6, 6, 7, 10, 10, 6, 6, 4, 6, 5, 5, 5, 4, 3, 3.

System 6: Chords: Am7(b5), D7, Gm7, Am7, Ab7, Gm7. Tablature: 8, 6, 8, 5, 5, 7, 5, 5, 7, 5, 5, 4, 3, 3, 6, 5, 4, 3.

VOICE LEADING PAIRS OF SEVENTH CHORDS

Pairs of chords built on two consecutive scale tones can be very useful in comping and chord soloing. I studied them extensively as a logical structure before discovering that Joe Pass used them extensively in his chord solos. They are relatively easy to finger and memorize.

By using the application options shown below, one pair of chords can be used for many chords in a progression by emphasizing one or another as either a chord named after its root or as a [secondary root](#), as described in [Substitution](#).

application producing sevenths and ninths

chord type	I ^{ma} 7	II ^m 7	III ^m 7	IV ^{ma} 7	V7	V7	VI ^m 7	VII ^m 7b5
use	II ^m 7 - III ^m 7	II^m7 - III^m7	II ^m 7 - III ^m 7	VI ^m 7 - VII ^ø 7	V7 - VI ^m 7	VI ^m 7 - VII ^ø 7	V7 - VI ^m 7	VI ^m 7 - VII ^ø 7
emphasize	III ^m 7	II ^m 7	III ^m 7	VI ^m 7	V7	VII ^m 7b5	VI ^m 7	VII ^m 7b5
logic	I ^{ma} 9 = 1-3-5-7-2, III ^m 7 = 3-5-7-2	root	root	IV ^{ma} 9 = 4-6-1-3-5 VI ^m 7 = 6-1-3-5	root	V9 = 5-7-2-4-6, VII ^m 7b5 = 7-2-4-6	root	root

application producing sixths (these work better in swing-related styles)

chord type	I ^{ma} 7	II ^m 7	III ^m 7	IV ^{ma} 7	V7	VI ^m 7	VII ^m 7b5
use	V7 - VI ^m 7	VI ^m 7 - VII ^ø 7	n/a	II ^m 7 - III ^m 7	II ^m 7 - III ^m 7	n/a	n/a
emphasize	VI ^m 7	VII ^m 7b5		II ^m 7	III ^m 7		
logic	VI ^m 7 = 6-1-3-5, I6 = 1-3-5-6	VII ^m 7b5 = 7-2-4-6, II ^m 6 = 1-3-5-6	sixths must have a major sixth	II ^m 7 = 2-4-6-1, IV6 = 4-6-1-2	III ^m 7 = 3-5-7-2, V6 = 5-7-2-3	sixths must have a major sixth	sixths must have a major sixth

II-V-I AND II-bII-I TOP VOICE LEADING

major II-V-I and II-bII-I

Common tones: 1, 2, 3, b3 4, 5, 6 or b7. All can be II-bII-I.

Three-tone sequences (include retrograde such as 1-2-3 and 3-2-1): 1-#1-2, 1-2-3, 1-2-b3, 1-b-3-4, 2-#2-3, 2-3-4, 2-3-5, b3-4-5, 3-4-5, 3-5-6, 4-5-b7, 4-5-6, 5-#5-6, 5-6-7, 5-6-b7, 5-6-1, 5-b7-1, b6-b7-1, b6-7-1, 6-#6-7, 6-7-1, 6-b7-1, b7-7-1, 7-1-2 .

minor II-V-I. II bII Im and IIIm bII Im

Common tones 1, 2, b3 4, 5, or b7. All can be II-bII-Im.

Three tone sequences: 1-#1-2 , 1-2-b3, 1-b3-4, 2-b3-4, b3-4-5, b3-4-5, 4-5-b7, 5-b6-b7, 5-b7-1, b6-b7-1, b6-7-1, b7-7-1, b7-1-2.

Key Scale

Key scale refers to any permanent or temporary tone center, where the tone center is numbered "I".

Major II-V-I and Minor II-V-I

Major II-V-I cadences are literally drawn from IIIm-V-I major scale-tone chords (Dm7-G7-Cma7). Minor II-V-I cadences are drawn from VIIIm7b6-III7-VIm7 major scale-tone chords (Bm7b5-E7-Am7), where they are renumbered to II-V-I, so the tone center is on VI minor, the relative minor (of "I"). The III chord of the parent major scale is usually changed to major or dominant seventh (E7), making it a stronger "V" chord in leading to the key on parent scale VIm7 (Am7).

bII chords should usually use the chord scale Lydian dominant, which is mode IV of bVI melodic minor. When the top voice leading is conducive, bVIm(ma7) bII7 Im is preferred to IIIm-bII-Im. The bVIm(ma7)-bII7-Im cadence (Abm[ma7]-Db7-Cm) uses melodic minor Im(ma7) to IV13#11 in the key of flat six (Ab melodic minor for the key of C).

Interchangeable Major and Dominant Seventh and Ninth

Major seventh (i.e. Cma7) can usually be replaced by dominant seventh (i.e. C7) by lowering the seventh a half step (one fret toward the head of the guitar).

Dominant seventh (i.e. C7) can usually be replaced by major seventh (i.e. Cma7) by raising the seventh a half step (one fret toward the body of the guitar).

Major ninth (i.e. Cma9) can usually be replaced by dominant ninth (i.e. C9) by lowering the seventh (not the ninth) a half step (one fret toward the head of the guitar).

Dominant ninth (i.e. C9) can usually be replaced by major ninth (i.e. Cma9) by raising the seventh a half step (one fret toward the body of the guitar).

Flat Five Substitute

II7-bII7-I7

Where the second chord is a flat two of the key (Db) in these examples, it is a substitute for the V chord. The root of the flat two chord is a flatted fifth away from the root of the V chord.

Where the first chord is a flat six of the key (Ab) in these examples, it is a substitute for the II chord. The root of the flat six chord is a flatted fifth away from the root of the II chord.

Since melodic minor IV13#11 = melodic minor VIIb5#5b9#9, and their roots are a flatted fifth apart, melodic and harmonic structures of both can be used at the same time. For example, a guitar player may play a G7#5#9 chord (VII#5#9 of Ab melodic minor) while a keyboard player thinks and plays Db13b5 (IV13b5 of Ab melodic minor), since all the notes of G7#5#9 are in Db13b5.

bVI7-V-I7

Where the first chord is a flat six of the key (Ab) in these examples, it is a [flat five substitute](#) for the II chord. The root of the flat six chord is a flatted fifth away from the root of the II chord.

Sharp Two Diminished Seventh Substitute

#II dim7 may be substituted for V7 (or V9, bII7 or bII9) but cannot be played at the same time as any of the chords it substitutes for. Since #II dim7 = I dim7, all of the notes except the root of the I dim7 move up chromatically (up a half step) to the tones of a I7 chord. For that reason, this progression works best ending on I7 (rather than Im7 or Ima7).

Change of Mode

The “I” chord is often changed in jazz (and other styles) between major, minor and dominant types. It is especially effective to end a minor II-V-I with a major type (major 7, major 9 or 6) or a dominant type (7, 9, 13). In major key blues, avoid using a b6, which occurs in IIm7b5 and V7b9 on a major II-V-I.

The Page Layout

Each cadence row features three consecutive top tones of a heptatonic (seven tone) scale, three consecutive tones of a pentatonic scale or a common top tone. The left side of each page is II-V-I. The right side is II-bII-I. A complete major II-V-I is four rows:

row 1: major type I chords

row 2: dominant type I chords

rows 3 and 4 are the same as 1 and 2, but with the top tones in reverse order (retrograde)

Parts of the sequence are missing where the chords don't sound well.

Minor cadences with three consecutive top tones only have one type of “I” chord, so they have two rows: top voice in forward, then reverse order (i.e. 1-2-3 and 3-2-1). Common tone cadences of major II-V-I have two rows: one with a major type I chord and one with a dominant type I chord. Common tone cadences of minor II-V-I have only one row.

How to Learn and Apply II-V-I Cadences

Usually, the best step-by-step plan would be:

- Learn all of the common tone cadences first and apply them to II-V-I cadences as they occur in songs, using long durations of the chords. Substitute II-bII-I as appropriate.
- learn the “best II-V-I” cadences and apply to II-V-I in songs as above.
- apply super-imposed cadences with top voice in low range of pitch in comping without creating a secondary melody to the soloist
- apply super-imposed cadences with top voice in a high range of pitch, creating a secondary melody to the soloist

FOUR-BEAT CADENCES

How to Use These Cadences

the target chords

The last chord in each sequence is a target chord. The target chord is typically on beat one. When it works harmonically, the first four chords can be played with one on each of the four beats of a bar preceding the target chord.

A cadence version is shown for each of common chord types: a I chord, a IV chord, a II chord and a V chord.

top-voice melodic cells

The sequence of notes made up by the highest-pitched note of each chord makes a melodic cell. It is identified with the title of each example, such as “b3-1-b7-5-1”, indicating the numbered tones in the key.

using part of the four-beat cadence

It would often obscure the original progression if you play the first chord of these four-beat cadences (five chords including the target chord) on the first beat of the bar before the target chord. When the first chord is basically the same as in the original progression, it's obviously not a problem. But when the listener expects a IV chord (like bar two of a jazz blues) and you play a V chord, it can be a little disconcerting to the listener. Especially if you are playing with another musician that *is* playing the IV chord while you play the V chord. Just listen and make good decisions.

You don't have to use all four of the first four chords. You could use the fourth chord on the last beat before the target chord. You could use the third and fourth chords on the last two beats before the target chord. Or, you could use the second, third and fourth chords on the last three beats before the target chord.

rhythm

To make the rhythm more interesting, some of the chords could use pushes and pickups. See [Varying Rhythm](#) and [Hearing Pickups and Pushes](#). Pushes are generally better for the cadences, since they are less busy.

building chord melody style

To build a chord melody style like Joe Pass or Barney Kessel, you need to know a lot about [Voice Leading](#) and a lot about melodic cells. See [Four Steps To Improv/Melodic Cell Types](#). You can get started with a few melodic cell types and these Four-Chord Cadences.

Also see [Melodically Superimposed Cadences](#), especially the Playing Melodically Cadences set of sections accessed from the table of contents on the first page.

DIMINISHED-SOUNDING DOMINANT CADENCES

Play the examples on the first system (pair of staves with music notation and tablature) to get familiar. The second and third systems are a library of fingerings by string set. The bottom system shows the top voice leading options.

Build the ninth-not root chords from the third of the V chord of your target (C). Move up or down in minor thirds (B-D-F-Ab). In ascending order and in the key of your target, this will give you (G)13nr (major V type), (D)IIIm7b5 (harmonic minor II type), (Db)bII9 no root (meleodic minor IV type), (E)III7b9 no root. The III7b9 has a remote relationship, so avoid using last before resolving to the target.

Ninth No Root Type - [link to video](#)

Thirteen Flat Nine Type - [link to video](#)

Be careful with the voice leading when resolving these 13b9 types (more so than with the previous ninth no root type), especially the top and bottom voices (soprano and bass). Avoid chromatic changes when you can.

Two or more of these may be used to make a cadence to a target chord. The thirteen flat nine cadence tends to resolve better up a perfect fourth from the letter name of the last chord. So, if the last 13b9 chord is G13b9/Ab, it would resolve to a C chord.

Another way to look at these is that they are diminished seventh chords with a whole step voice movement on the top. Looking at it that way, any 13b9 voiced as you see it below could resolve up a major third from its bass note, such as G13b/Ab resolving to a C chord.

Chord sequence: G13(b9)/Ab Bb13(b9)/B C#13(b9)/D E13(b9)/F C#13(b9)/D E13(b9)/F G13(b9)/Ab Bb13(b9)/B C6/ Am9 F#m7 Ebmaj7

resolve to either

Using Diminished Scale For Diminished -Sounding Dominant Cadences

what chords does the diminished scale make?

All of the notes of the diminished scale can't be sustained at once on a six-string guitar, nor on a seven string guitar, since the scale has eight notes. The chord quality including all the notes of the scale would be $13\#11b9\#9$ where the repeating half step-whole step scale pattern would begin by ascending a half step from the root (followed by whole step, half step, whole step, etc.) or by descending a whole step from the root (followed by half step, whole step, half step, etc.).

minor V type chord subsets of the harmonized diminished scale

V type chords in minor keys typically have flat nine or sharp nine. Subset chords of the harmonized diminished scale can be used to get the same or similar sound and feel. See [Scale Ambiguity/Ambiguos Scales For Dominant chords/Compare Altered Dominants With Flat Nine Or Sharp Nine](#).

The composite of the first three chords below represents $A13\#11b9\#9$. $A13\#11b9\#9$ is the full chord, shown last,. It has eight notes and won't fit on the guitar.

the 7b9 or 7#9 part of the scale for minor V types

The most typical alterations of minor key V type chords are #5, b9 and #9. The harmonized diminished scale ($13\#11b9\#9$) doesn't provide the sharp five. It does provide both the flat nine and sharp nine. In using the diminished scale for minor key V type chords, emphasize the $7b9\#9$ part of the scale, which is six of its eight notes. Don't over-emphasize the remaining two notes: the sharp eleven and the thirteen.

The thirteen is more acceptable than the sharp eleven. G Phrygian major (also called G Phrygian dominant) is the typical V type scale for C minor. C harmonic minor and G Phrygian major have the same notes. Each name is used to indicated the context as being the key of C minor (with a harmonic

minor scale) or the temporary key of G on the V of C. When a V type minor chord has a sharpened fifth, it is usually a flat six of the V type scale (G Phrygian major, 1-b2-3-4-5-b6-b7) that is used for the sharpened fifth. The flat six (equivalent to flat thirteen) of the G Phrygian major scale can represent the sharp five in the G7#5 chord. “b13” is sometimes part of a chord name, indicating that a chord has a fifth and a sharpened fifth, but calling the sharpened fifth a “flat thirteen”, so as not to break chord naming conventions. We don’t want to get a ticket from the harmony police! See [Chord-Naming Conventions/Chord-Naming Rules By Chord Tone/Altered Fifths](#).

With Escherian or deceptive cadences, the key of C minor could be expected, but the actual result may be the key of C major. See [Melodically Superimposed Cadences/Escherian Cadence](#) and see [Establishing A Key/Key Defined/Authentic And Deceptive Cadences](#).

The thirteen tone is the same tone as a “six” and contradicts the typical V type chord with a sharpened fifth (G7#5). Although the thirteen (the “E” note in G13b9 as a V chord in C minor) sometimes sounds cool if the other instrument parts don’t strongly emphasize the flat six, which could cause a conflict. In subtle arrangements, the six and the flat six can co-exist, but it takes finesse.

where the 13b9 chord is part of the song

Sometimes the 13b9 chord is actually part of the song. It is used in a few Jobim Tunes and other songs listed in (just click the link at the end of this sentence) [Half-Whole-Half Cells and Diminished Scale. /applying diminished scale to 13b9 chords](#).

identifying the diminished seventh part of the 13#11b9#9 chord

We want to emulate a V7b9 chord (G7b9 for the key of C minor). Without a root, that is a VII diminished seventh chord in the key of C minor, a B diminished seventh chord. Here’s the logic: Thinking in the key of V in the key of C minor, we can use the name “G diminished scale” (half/whole) where we ascend from the note G in repeating half steps and whole steps. In the key of V (G) the numbered tones are 1-b2-b3-3-#4-5-6-b7. The diminished seventh chord part of that scale we want to emphasize consists of tones b2-3-5-b7. In G, that’s Ab-B-D-F. Those tones make up a diminished seventh chord with four alternate names: Abdim7, Bdim7, Ddim7, Fdim7. Bdim7, the VIIIdim7 is usually most relevant, since its root is a half step below “C” the tone center of the key of C minor.

moving a chord part of 13#11b9#9 in minor thirds

Moving any subset chord of 13#11b9#9 (the harmonized diminished scale) up or down in minor thirds will produce all chords that are part of 13#11b9#9. Here are some examples: [link to video](#)

The image displays two staves of musical notation in 4/4 time, showing voice leading for chords derived from the 13#11b9#9 scale. The first staff contains measures 1 through 4, and the second staff contains measures 5 through 8. Each measure shows a chord in the treble clef and its constituent notes in the bass clef, labeled T (Trio), A (Alto), and B (Bass). The chords are: 1. Bb7(b9), 2. Bb(b9), 3. Bb7(#9), 4. Bb7(#11), 5. Bb(b9), 6. Bb7(#9), 7. Bb7(#11), 8. Bb13. The bass clef notes are: 1. 3, 4, 6; 2. 6, 7, 9; 3. 9, 10, 12; 4. 12, 13, 15; 5. 6, 7, 9; 6. 9, 10, 12; 7. 12, 13, 15; 8. 15, 16, 18. The notation includes accidentals and sharp signs to indicate the specific notes of each chord.

ornamenting the subset chord

If a tone is in the bII dim7 (Db dim7) part of the I13#11b9#9 chord (C13#11b9#9), ornament it with a whole step above or with a half step below.

MODES

Modal use of a seven tone scale like the major scale can establish any note of the scale as a key, without changing the notes involved. This does, however, call for a renumbering of the scale. To renumber the scale, each mode is compared to a major scale on the same note chosen as a tone center. If “D”, the second step of the C major scale was chosen as a tone center, it could be compared to a major scale on the same note, “D”. Regardless of the key, this would produce the following mode formulas, expressing the relationship of each to a major scale on the same note.

Chords are typically built with an every-other note pattern, using the tertian cycle (cycle of thirds) 1-3-5-7-2-4-6-1 (repeating). Triads are built with every other note of the scale for three notes, such as 1-3-5 for the I chord and 2-4-6 for the IIIm chord. Seventh chords are built with every other note of the scale for four notes, such as 1-3-5-7 for the Ima7 and 2-4-6, 1 for the IIIm7.

Modes of the Major Scale

scale tone	letters in C	mode name	mode formula	triad	seventh chord
I	C-D-E-F-G-A-B-C	C major or Ionian	1-2-3-4-5-6-7	I major	Ima7
II	D-E-F-G-A-B-C-D	D Dorian	1-2-b3-4-5-6-b7 (of D major)	II minor	IIIm7
III	E-F-G-A-B-C-D-E	E Phrygian	1-b2-b3-4-5-b6-b7 (of E major)	III minor	IIIIm7
IV	F-G-A-B-C-D-E-F	F Lydian	1-2-3-#4-5-6-7 (of F major)	IV major	IVma7
V	G-A-B-C-D-E-F-G	G Mixolydian	1-2-3-4-5-6-b7 (of G major)	V major	V7
VI	A-B-C-D-E-F-G-A	A Aeolian	1-2-b3-4-5-b6-b7 (of A major)	VI minor	VIIm7
VII	B-C-D-E-F-G-A-B	B Locrian	1-b2-b3-4-b5-b6-b7 (of B major)	VII dim.	VIIIm7b5

By sharpening the fifth of the major scale, another system of modes is produced. The mode on the sixth step is the popular harmonic minor, which is Aeolian natural seven. Modes of major scale and major sharp five scale are freely combined, especially Aeolian and harmonic minor.

Modes of the Major Sharp Five Scale

scale tone	letters in C	mode name	mode formula	triad	seventh chord
I	C-D-E-F-G#-A-B-C	C major sharp five	1-2-3-4-#5-6-7	I augmented	Ima7#5
II	D-E-F-G#-A-B-C-D	D Dorian sharp four	1-2-b3-#4-5-6-b7 (of D major)	II minor	IIIm7
III	E-F-G#-A-B-C-D-E	E Phrygian major third	1-b2-3-4-5-b6-b7 (of E major)	III major	III7
IV	F-G#-A-B-C-D-E-F	F Lydian sharp two	1-#2-3-#4-5-6-7 (of F major)	IV major	IVma7
#V	G#-A-B-C-D-E-F-G#	G# Mixolydian sharp one	#1-2-3-4-5-6-b7 (of G major)	#V dim.	#V dim. 7
VI	A-B-C-D-E-F-G#-A	A Aeolian natural seven or A harmonic minor	1-2-b3-4-5-b6-7 (of A major)	VI minor	VIIm(ma7)
VII	B-C-D-E-F-G#-A-B	B Locrian natural six	1-b2-b3-4-b5-6-b7 (of B major)	VII dim.	VIIIm7b5

Melodic minor is used modally in its ascending form, which is major scale with a flatted third. The descending form of melodic minor is the same as Aeolian, but will not be used here. Modes of the melodic minor are less common, but occur often in jazz.

Modes of the Melodic Minor Scale

scale tone	letters in C	mode name	mode formula	triad	seventh chord
I	C-D-Eb-F-G-A-B-C	C major flat three or C melodic minor	1-2-b3-4-5-6-7	I minor	Im(ma7)
II	D-Eb-F-G-A-B-C-D	D Dorian flat two	1-b2-b3-4-5-6-b7 (of D major)	II minor	IIIm7
bIII	Eb-F-G-A-B-C-D-Eb	Eb Phrygian flat one	b1-b2-b3-4-5-b6-b7 (of E major)	III augmented	IIIIma7#5
IV	F-G-A-B-C-D-Eb-F	F Lydian flat seven	1-2-3-#4-5-6-b7 (of F major)	IV major	IV7
V	G-A-B-C-D-Eb-F-G	G Mixolydian flat six	1-2-3-4-5-b6-b7 (of G major)	V major	V7
VI	A-B-C-D-Eb-F-G-A	A Aeolian flat five	1-2-b3-4-b5-b6-b7 (of A major)	VI dimin.	VIIm7b5
VII	B-C-D-Eb-F-G-A-B	B Locrian flat four, super Locrian, or "flat all"	1-b2-b3-b4-b5-b6-b7 (of B major)	VII dimin.	VIIIm7b5

MAJOR SCALE-TONE TRIAD VOICE LEADING

Up stepwise: all three tones ascend one scale step.

Down stepwise: all three tones descend one scale step.

Up a third: the root moves down a scale step and the third and the fifth stay the same.

Down a third: the fifth moves up a scale step and the root and the third stay the same.

Up a fourth: the third and the fifth move up a scale step and the root stays the same.

Down a fourth: the root and the third move down a scale step and the fifth stays the same.

Three-Note Linear Scale-Tone Triads

Memorize linear major scale-tone triads in close voicing and in all three inversions (ascending 1-3-5, 3-5-1 or 5-1-3) with the lowest pitch fingered by (1) the first finger (2) the second or third finger or (3) the little finger.

You'll need to keep track of two things:

1. The major scale, which will progress from step "1" to "1" on one of the strings. (2) Once you establish the fingering for the major triad on step "1", move from step "1" to to step "2" on the string where the major scale is ascending and flat the third. Keep track of where the third is by the order of the tones. From the lowest to highest pitch, close-voiced triads are 1-3-5, 3-5-1 or 5-1-3. From the lowest to highest pitch, open-voiced triads are 1-5-3, 3-1-5 or 5-3-1.
2. As you progress up the major scale, the chord qualities should be as follows: I major, II minor, III minor, IV major, V major, VI minor, VII diminished. Once you have played the I major and II minor triads, you have established a fingering for major and minor triads. When you get to the VII diminished triad, you can attain it by one of three alterations of major or minor triads: diminished = minor b5 = major b3, b5= major #1 (then descend the entire triad one half step).

Inversion Cycles

When roots progress up in fourths or up in thirds, the inversion cycle is 1-3-5, 5-1-3, 3-5-1, 1-3-5, etc. With roots progressing down in fourths or down in thirds, the inversion cycle the opposite: 1-3-5, 3-5-1, 5-1-3, 1-3-5, etc.

SCALE-TONE SEVENTH CHORD VOICE LEADING

Important: the root movement referred to on the left of each table below is conceptual only. Think of that movement as what the bass player plays. If the root moves in your voice leading, it is mentioned on the right side of the columnar chart.

Neighboring and Passing Chords

In the same manner that a neighboring tone or passing tone can decorate chord tones of the current chord, groups of them can serve as neighboring or passing tone chords. As with the neighboring or passing tones, they should be de-emphasized rhythmically.

When any neighboring or passing chord is emphasized, it becomes a chord that is added to the composition. Be sure that you are communicating such a chord to the listener and other musicians as an appropriate chord for the arrangement.

Chord tones not mentioned on the right side below do not move.

root movement

root up a fourth

root down a fourth

root up a step

root down a step

voice movement from first chord

fifth and seventh move down a scale step

root and third move up a scale step

third, fifth and seventh move down a scale step

root, third and fifth up a scale step

Upper and Lower Harmony Chords

root up a third

When a scale-tone seventh chord is used on the third of the current chord, it produces a ninth no root named after the current root. This is not usually done on a major scale-tone III or VII chord. However, when the III^m7 chord is changed to dominant seventh chord, it can be used as a III⁷b9 chord, though this changes the scale to harmonic minor on the sixth step of the parent major scale (E⁷b9 is a V⁷b9 chord of A harmonic minor, built on the sixth step of C major).

root down a third

When a scale-tone seventh chord is used on the sixth of a I, IV or V chord (root down a third), a minor seventh chord is produced. This minor seventh is a synonym of a sixth chord on the original root. For example, an Am⁷ build on the sixth of C is a synonym of C⁶.

When a scale-tone seventh chord is used on the sixth of a IIm chord (root down a third), a minor seventh flat five chord is produced. This VIIIm7b5 is a synonym of IIm6: Bm7b5 = Dm6.

Chord tones not mentioned on the right side below do not move.

I7-I°7-IIIm7b5 (=IVm6) I Voice Leading

Descend all notes of a dominant seventh chord without the root (I7) chromatically twice, then descend to the closest available tones of the “I” chord.

I-IV-I7n3-IV voice leading: ascend the voices which begin as the third and the fifth of the (I) by scale tones twice, then descend them once.

Scale-Tone Seventh Chords Are Tertian Quadrads

A scale-tone seventh chord is constructed with four notes in an every-other-note pattern called thirds. A series of notes made in thirds, such as a scale-tone seventh chord can be called *tertian*, meaning made of thirds. A three note chord is called a *triad*. Following the same series of Greek names, a four note chord can be called a *quadrads*. So, scale-tone seventh chords are *tertian quadrads*.

A five note chord is a *pentad*, six notes a *sextad* and seven notes a *heptad*.

STEPWISE QUADRAD VOICE LEADING

Parallel Scale-Tone Chords

Successions of scale-tone chords with their roots in stepwise order can be used to walk up or down the scale to a target chord. Although this is not all that exciting, you still need to know it, in order to do more sophisticated progression such as chromatic progression.

root position (root in bass), E form chords: string set 6-4-3-2, 107350 voicing

Fma7 I	Gm7 III	Am7 V	Bbma7 VI	C7 VIII	Dm7 X	Em7b5 XII

root position (root in bass), A form chords: string set 5-4-3-2, 015730 voicing

Bbma7 I	Cm7 III	Dm7 V	Ebma7 VI	F7 VIII	Gm7 X	Am7b5 XII
1 5 7 3	1 5 b7 b3	1 5 b7 b3	1 5 7 3	1 5 b7 3	1 5 b7 b3	1 b5 b7 b3

root position, combined E form and A form

Bbma7 VI	Cm7 VIII	Dm7 V	Ebma7 VI	F7 VIII	Gm7 III	Am7b5 IV
1 7 3 5	1 b7 b3 5	1 5 b7 b3	1 5 7 3	1 5 b7 3	1 b7 b3 5	1 b7 b3 b5

Creating A Scalar Voice With Inversions

Stepwise voice leading can be used to create a scalar voice by combining the inversions of a seventh chords on each of two consecutive scale tones. Alternate the inversions of the two chords as shown below. Notice that every other chord makes a series of inversions of a single chord.

V7 alternated with VIIm7

F7 is V7 of Bb major and Gm7 is VIIm7 of Bb major

PERFECT FOURTH QUADRAD CADENCES

Diads are two note chords, triads are three note chords and quadrads are four note chords. Tertian chords are built with every other note of a seven tone scale, using the numeric sequence 1-3-5-7-2-4-6-1, etc. The every-other-note creates a sequence of thirds, since each note is inclusively three notes from the next. Seventh chords are tertian quadrads.

Harmonic cadences are devices to establish a chord as the expected ending chord, and therefore its root as the tone center. This can be established for the piece of music as a whole, and for secondary and temporary tone centers during the piece.

Secondary Dominants

The oldest cadence in music history is “V to I”, where the chord on the fifth step of the key scale (called the dominant) leads to the chord on the first step of the key scale. This chord on the fifth of the scale of the intended tonic is commonly a dominant seventh type chord (or altered dominant seventh in jazz). When the intended tonic is not the first step of the parent major scale, the the seventh type chord on the fifth of the intended tonic is called a *secondary dominant*. See [The Secondary Dominant Cycle](#).

Flat Five Substitute

In jazz, a [flat five substitute](#) chord replaces the chord on the fifth with one a flat fifth above or below the root of the chord on the fifth of the tonic. The note a flat fifth above or below any given note is the same note. The [flat five substitute](#) becomes a chord built on the upper chromatic neighbor to the tonic, on the root up a half step (one fret) from the root of the intended tonic chord.

The 7-3-6-2-5-1-4 Series of Perfect Fourths

This is the most common structural source for cadences. The major scale is the only scale whose notes can be ordered in a continuous series of seven perfect fourths.

Four-note scale-tone chords constructed in thirds can accurately be called *major scale-tone tertian quadrads*, but are commonly called *major scale-tone seventh chords*. See [Scale-Tone Seventh Chord Progression](#).

Major Scale-Tone Seventh Chords in Perfect Fourths, Three-Note Voicings

root in bass, trade three and seven, no fifth

VIIIm7b5	III7	VIIm7	IIm7	V7	Ima7	IVma7

F#m7(b5) XIV	B7 XIV	Em7 XII	Am7 XII	D7 XI	Gma7 X	Cma7 IX

Recognizing II-V-I Cadences in Chord Progressions

Memorize letter names in perfect fourths. The sequence is B-E-A-D-G-C-F with every note flat, followed by B-E-A-D-G-C-F (all natural), then B-E-A-D-G-C-F with all notes sharp, as shown below.

the perfect fourth series

B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb

Any consecutive seven of the letters in the perfect fourth series constitutes the numbered tones “7-3-6-2-5-1-4” for a particular major scale. Notice that “1” is the next to last letter in the series, so the major scale for any seven consecutive letters would be the next to last letter (reading left to right).

“II-V-I” would be the fourth through sixth letters of any consecutive seven letters, where the sixth letter is “1”. Go through a jazz fake book and look for “II-V-I” occurring multiple times in the same piece. The “II-V-I’s” will often occur in many keys in the same song. Next, you’ll need to determine whether those “II-V-I’s” are major or minor.

Recognizing II-V-I cadences is a beginning. You’ll then look for longer sequences of fourths in the “7-3-6-2-5-1-” order: VIIIm7b5-IIIm7 (usually III7)-VIm7-IIIm7-V7-Ima7-IVma7.

Major II-V-I Cadences

In major mode, “IIIm7 V7 Ima7” is a “II-V-I” cadence. IIm7 may be IIm9 or other versions of IIm7 that include 2, 4 or 6 in the key of the chord root. V7 may be V9, or other versions that include 2, 4 or 6 in the key of the chord root. Ima7 may be Ima9, I6, or other versions that include 2 or 6.

Minor II-V-I Cadences

In minor mode, “IIIm7b5 V7 Im7” is a “II-V-I” cadence. Their origin is VIIIm7b5, III7 VIm7, where the key is established on VI. The chord roots are then renumbered so VII becomes II, III becomes V and VI becomes I. IIIIm7 has been changed to III7 (which becomes V7 of the minor IIIm7b5 V7 Im7. In such a case, the III7 chord (functioning as V7) may optionally have #5, b9 or #9.

Flat Five Substitutes And II bII I Cadences

In jazz, bII7 is commonly substituted for V7, changing II-V7-I (Dm7-G7-Cma7) to II-bII-I (Dm7-Db7-Cma7). This is based on the synonym V7b5 = bII7b5. Scales to build harmony and melody based on this synonym are most notably derived from the melodic minor scale. Mode VII of melodic minor creates a V7#9b9#5b5 chord, which is a synonym of mode IV of melodic minor, which creates the bII13#11 chord, a [flat five substitute](#).

II-V-I Cadences Of Four Parent Scale Types

major scale	IIm13	V13	Ima9
harmonic minor scale	IIm7b5	V7b9b13	Im
melodic minor scale	IIm7b5	V9b13	Im
harmonic major scale	IIm13b9	V9b13	Ima9

voice leading

Descend the fifth and seventh a scale step to become the scale-tone seventh chord whose root is up a perfect fourth, in the cycle of root names 7362514

Major scale-tone seventh chords progress most smoothly with conservative voice leading, where each note in the chord moves to the same note in the next chord, or to the closest possible note in the next chord.

When the roots of major scale-tone seventh chords progress in perfect fourths with conservative voice leading, roots and fifths “switch” and thirds and sevenths “switch”, as you can see in the text below.

- ✦ the root remains on the same note to become the fifth of the next chord.
- ✦ the third remains on the same note to become the seventh of the next chord.
- ✦ the fifth descends a scale step to become the root of the next chord.
- ✦ the seventh descends a scale step to become the third of the next chord.

The root of each chord remains on the same note to become the fifth of the next chord. The third of each chord remains to become the seventh of the next chord. The fifth of each chord descends one scale tone to become the root of the next chord. The seventh of each chord descends one scale tone to become the third of the next chord.

Chords are primarily constructed with the every-other-note cycle of numbers called the cycle of thirds, shown at the left below. A four-note chord on the first step of the major scale built in thirds would use scale tones 1, 3, 5 and 7. A four-note chords built on the second step built in thirds would use scale tones 2, 4, 6, and 1. These are listed in the illustration below at the right, under the column headers “root, third, fifth, seventh”. For each chord, the major scale tone used for the root is shown in the root column, the major scale tone used for the third is shown in the third column, etc. The third of the chord built on step five, for example, is major scale tone “7”.

Four-note chords built on steps three, six and two are minor seventh (1-b3-5-b7). The four note chord built on step five is dominant seventh (1-3-5-b7). The chords built on steps one and four are major seventh (1-3-5-7).

In the chart at the right below, chords are listed in vertical order from top to bottom, built on major scale tones 7-3-6-2-5-1-4, respectively. This shows the root order of perfect fourths: 7-3-6-2-5-1-4, which repeats after “4” and is cyclical (serial).

Notice that “7” and “2” are root and third of the chord built on “7” (VII^m7 b5) and can be retained in progressing to the chord built on “3” (III^m7) as its fifth and seventh, respectively. Also, notice that the “4” and “6” are fifth and seventh of the chord built on “7” and can each descend in progressing to the chord built on “3” as its root and third, respectively. This pattern is consistent: the “3” and “5” of the

III^m7 chord retain to become the fifth and seventh of the VI^m7 chord and the “7” and “2” of the III^m7 chord each descend to become the root and third of the VI^m7 chord.

Roots become fifths by staying, fifths become roots by descending. Thirds become sevenths by staying, sevenths become thirds by descending. So, you could say that roots and fifths “trade” and thirds and sevenths “trade”. Descend the fifth and seventh of each chord to become the root and third of the next.

fourteen chord sets of voicings

Each two rows of chords below are a set. Play each cycle until you reach the chord at the first or second fret, then move that chord up twelve frets to continue the cycle. The “header” shows the chords by roman numeral in large type and possible connecting chords we’ll study later listed between them in smaller type.

two archetypal chords and four qualities

The last chord in each 7362514 series (each row at the beginning of this Descend Five and Seven section) is an archetype major seventh. Learn the four versions in its family on scale tones IV, V, VI, VII, every other chord in reverse order. The two families of archetypes will preview all chord voicings used in the fourteen chord set.

Memorize the order of qualities: VII^m7b5 III^m7 VI^m7 II^m7 V7 I^ma7 IV^ma7. II^m7 is often altered to III7. If you memorize the type archetype sets of four chords and know the quality that’s supposed to occur on each step, you can get very fluent on these voicings.

more detailed fingerings

For more detailed fingerings, see “[Scale-Tone Seventh Chord Progression](#)”/Major Scale-Tone Sevenths in Fourths, Descend Five and Seven, Bass on Sixth String, Fifth String and Fourth String.

in reverse order: roots down in fourths: ascend root and third

By playing the descend five and seven cycle shown earlier in reverse order, the root movement is down in fourths (instead of up in fourths). That is to say the root name in each case moves down as fourth. In this voice leading, the root and third both move up a scale step, while the note that names chord moves down a fourth. Roots down in fourths progressions uses the cycle of root names 4152637

This is essential in preparing for the next section, the [Secondary Dominant Cycle](#), in which each target chord is preceded by one whose root name is down a fourth.

<i>Bbma7</i> I 1 5 7 3	<i>Fma7</i> II 5 1 3 7	<i>C7</i> III 1 5 b7 3	<i>Gm7</i> III 5 1 b3 b7	<i>Dm7</i> V 1 5 b7 b3	<i>Am7</i> V 5 1 b3 b7 1	<i>Em7b5</i> VII 1 b5 b7 b3
<i>Bbma7</i> VII 5 1 3 7	<i>Fma7</i> VIII 1 5 7 3	<i>C7</i> IX 5 1 3 b7	<i>Gm7</i> X 1 5 b7 b3	<i>Dm7</i> X 5 1 b3 b7 1	<i>Am7</i> XII 1 5 b7 b3	<i>Em7b5</i> XII b5 1 b3 b7

Descend Seven (roots up in fourths)

The common use of *descend seven* voice leading is where the seventh of the current chord descends to create a ninth chord without a root (nr = no root) on the root up a fourth. See [two other voice leading possibilities for descend seven](#) at the end of this section.

up a fourth to ninth no root

Descending the seventh of a chord one scale tone to its sixth creates a ninth chord with no root for the chord whose root is up a perfect fourth.

In “descend five and seven” voice leading, the fifth and seventh of the first chord each descended a scale tone to become the root and third of the next chord, respectively. The fifth descended to become the root of the next chord and the seventh descended to become the third of the next chord.

If the fifth does not descend to become the root of the next chord, the next chord will be without a root, but instead will have a note a scale tone above the root: “2”, since it didn’t descend. The “2” can function as a ninth, but much be in the mid to upper range, not in the bass. In the bass, a ninth strongly weakens the sense of what is the root.

Since IIIIm9 and VIIIm7b5b9 are currently unaccepted chord qualities, the VIIIm7b5 and IVma7 chords that would otherwise create them are not usable with the descend seven voice leading.

If the second chord in the pair of chords (with roots ascending in perfect fourths) is a VIm7, IIm7, V7, Ima7 or IVma7 type, it will become a ninth no root (VIm9nr, IIm9nr, V9nr, Ima9nr, IVma9nr, where “nr” means “no root”). If the chord on the third step of the major scale is altered to a dominant seventh chord, as it typically is, the VIIIm7b5 chord that precedes it could descend its “b7” to “b6” (numbered in relation to the VII chord root) to become a III7b9nr.

Versions of Descend Seventh chord progressions are shown below for each of the seven steps of the major scale in perfect fourth order: 7-3-6-2-5-1-4 (VIIIm7b5-IIIm7-VIm7-IIm7-V7-Ima7-IVma7 in seventh chords).

VIIIm7b5 to VIIIm6b5 = III7b9 no root (Minor IIm7b5 to IIm6b5 = V7b9 no root)

In harmonic minor, these are IIm7b5 and V7b9. In *There Will Never Be Another You*, these chords occur as VIIIm7b5 and III7b9 no root of the Eb major scale, which are IIm7b5 (Dm7b5) and V7b9 no root (G7b9nr) of the C harmonic minor scale.

In terms of harmonic minor, lowering the b7 in the $\text{IIIm}7\flat5$ produces $\text{IIIm}6\flat5$, which is the same as II diminished seventh or $\text{V}7\flat9$ no root.

Notice that the $\text{III}7\flat9$ is an altered version of the major scale-tone $\text{IIIIm}7$ chord, adding the $\flat9$.

The fifth of the parent major scale is raised to change the minor seventh chord to dominant seventh, then the $\flat9$ can be added.

$\text{IIIIm}7$ to $\text{IIIIm}\flat6 = \text{VIIm}9$ no root

In *The Days Of Wine And Roses*, these chords occur as $\text{IIIIm}7$ ($\text{Am}7$) and $\text{VIIm}9$ no root ($\text{Dm}9\text{nr}$) of the F major scale.

$\text{VIIm}7$ to $\text{IIIm}6 = \text{V}9$ no root

In *All The Things You Are*, bars one and two are $\text{Fm}7$ and $\text{Bbm}7$, which are represented below as $\text{VIIm}7$ and $\text{IIIm}9$ no root.

$\text{IIIm}7$ to $\text{IIIm}6 = \text{V}9$ no root

In *There Will Never Be Another You*, bars five and six are $\text{Cm}7$ and $\text{F}7$, represented below as $\text{Cm}7$ and $\text{F}9$ no root.

$\text{V}7$ to $\text{V}6 = \text{Ima}9$ no root

The $\text{Ima}9$ must have its root clearly identified aurally. In *All The Things You Are*, bars six and seven are $\text{G}7$ and $\text{Cma}7$, represented below as $\text{G}7$ and $\text{Cma}9$ no root.

I_{ma}7 to I₆ = IV_{ma}9 no root

In *All The Things You Are*, bars four and five are A_bma7 and D_bma7, represented below as A_bma7 and D_bma9 no root.

descend seven in fourths with change of mode

Some progressions in perfect fourths require changing more than one note.

- Ima7 to Im6 = IV9 no root. Changing from Ima7 to IV9 requires not only a “7 to 6” voice movement, but also a flatted third. The I chord must change from a major to a minor basis.

Abma7 IV	Abm6 III	Db9nr III

IIm7 to IIm6b5 = V7b9 no root. In Misty, the second and third chords, Bbm7 and Eb7b9 progress to the fourth chord, Abma7 as a IIm7 V7b9 Ima7 progression in the key of Ab. This darkens the mood of the major mode IIm7 V7 chord change by “borrowing” the V7b9 from Ab harmonic minor.

In terms of harmonic minor, lowering the b7 to 6 in the IIm7b5 produces IIm6b5, which is the same as II diminished seventh or V7b9 no root.

Bbm7 VI	Bbm6b5 V	Bbdim.7 V

two other voice leading possibilities for descend seven

Descending the seventh of a complete four-note seventh chord (with root, third, fifth and seventh) creates a chord with three possible names (synonyms):

- a chord with the same root name, but changed from seventh to sixth
- a scale-tone seventh chord down a third (Ima7 descend seven becomes VIm7)

change seventh chord to sixth chord

By descending the seventh of Ima7, IVma7, V7 or IIm7, *by a scale tone*, each of these seventh chords can be named instead as a sixth: I6, IV6, V6 or IIm6. In terms of the parent scale, Ima7 (1-3-5-7) changes to I6 (1-3-5-6), IVma7 (4-6-1-3) changes to IV6 (4-6-1-2), V7 (5-7-2-4) changes to V6 (5-7-2-3) and IIm7 (2-4-6-1) changes to IIm6 (2-4-6-7).

major seventh to sixth (major or Lydian)

minor seventh to minor sixth (Dorian)

dominant seventh to dominant seventh sharp five

In harmonic minor or Mixolydian b6, the sharp five can “proxy” as a flat six.

synonyms down a minor third

Another function of the descended seventh on I, II, IV or VI can be to create relative minor chords, each named on a root down two scale steps. VIIm7 is the relative minor of Ima7. IIIm7 is the relative minor of IVma7. IIIIm7 is the relative minor of V7. Also, IIIm7 with its flatted seventh descended to six becomes IIIm6 (2461) = VIIIm7b5.

Changing a scale-tone seventh chord to a scale-tone sixth chord means the last note in the series of parent scale thirds is lowered by one number. Descending the seventh of Ima7 by a scale tone, 1-3-5-7 becomes 1-3-5-6. Descending the seventh of IVma7 by a scale tone, 4-6-1-3 becomes 4-6-1-2. Descending the seventh of V7 by a scale tone, 5-7-2-4 becomes 5-7-2-3. Descending the flat seven of IIIm7 by a scale tone, 7-2-4-6 becomes 7-2-4-5.

DROP VOICING

drop voicing names the inversions of a chord

With chord inversion, one or more notes of a chord are each raised or lowered by an octave. Close voicing is where the notes of a chord are as close together as possible.

Drop voicing is a device used by arrangers to name the inversions of a chord, where a few or many chords in a row use the same inversion. Drop voicing usually pertains to four-note seventh chords.

the inversions of a close-voiced seventh chord

Drop voicing on seventh chords is based on the four close-voiced inversions of a seventh chord, which are easy to finger on a piano, yet would often require two hands on the fretboard to fret the four tones of each chord at once. Allan Holdsworth did this, but most of us don't.

Here are the four inversions of C major, fretted on string sets 6-5-4-3, 5-4-3-2 and 4-3-2-1:

figured bass numbering				figured bass numbering				figured bass numbering			
6	6	6		6	6	6		6	6	6	
5	4	4		5	4	4		5	4	4	
3	3	2		3	3	2		3	3	2	

	root position	first inversion	second inversion	third inversion	root position	first inversion	second inversion	third inversion	root position	first inversion	second inversion	third inversion
T												
A	4	5	9	12	0	1	5	8	7	8	12	15
B	5	9	10	14	0	4	9	10	8	12	15	17
	7	10	14	15	3	7	10	14	10	14	17	21
	8	12	15	19								

drop voicing lowers one or more notes by an octave

All of this pertains to four-note seventh chords. Drop two voicing lowers the next to the highest note one octave. Drop three voicing lowers the third highest note an octave. Drop four voicing lowers the lowest note in the chord by one octave. Drop one voicing is redundant, since dropping the top note of each inversion of a four-note seventh chord just produces another of the original inversions:

redundant drop one voicing

	root position	drop one voicing of root position	third inversion	first inversion	drop one voicing of first inversion	root position	second inversion	drop one voicing of second inversion	first inversion	third inversion	drop one voicing of third inversion	second inversion

drop two *and* four voicing lowers the second and fourth-highest notes one octave

The fourth-highest note is the same as the lowest of the four notes.

The diagram illustrates the process of creating drop two and four voicings for a seventh chord. It shows a sequence of eight musical staves in 2/4 time, each representing a different voicing of a G7 chord. The first staff shows the root position. The second staff shows the result of dropping the 2nd and 4th notes one octave. The third staff shows the first inversion. The fourth staff shows the result of dropping the 2nd and 4th notes one octave from the first inversion. The fifth staff shows the second inversion. The sixth staff shows the result of dropping the 2nd and 4th notes one octave from the second inversion. The seventh staff shows the third inversion. The eighth staff shows the result of dropping the 2nd and 4th notes one octave from the third inversion. Below the staves, fretboard diagrams for the T, A, and B strings are provided for each voicing, with fret numbers indicated.

	root position	drop 2 and 4 voicing on strings 6-5-3-2	first inversion	drop 2 and 4 voicing on strings 6-5-3-2	second inversion	drop 2 and 4 voicing on strings 6-5-3-2	third inversion	drop 2 and 4 voicing on strings 6-5-3-2

using drop voicing in arrangements

This applies best to four-part arrangements, such as vocal quartets, ensembles of strings, horns, etc., piano or vibraphone arrangements, or guitar arrangements such chord solos or comping.

Drop voicing works particularly well in harmonizing stepwise melodies on a chord progression in seventh chords with notes in quarter notes below approximately 240 BPM or eighth notes below approximately 120 BPM. Those melody notes that are in a current chord can use inversions of the current chord.

Melody notes not in the current chord can be harmonized with any of the following chords, as long as the melody note being harmonized is in the chord being used:

- ✦ The modal V chord, such as Em7 as the V of Am7 with a C major parent scale
- ✦ The [secondary dominant](#) V chord, such as E7 as the V of Am7 with a C major scale (C major sharp five scale during the E7 chord)
- ✦ A chord built on an upper or lower neighbor chord root, such as Bm7b5 or G7 as a neighbor to Am7 with a C major parent scale
- ✦ A [flat-five substitute](#), such as a Db7 preceding a Cma7 chord with a C major parent scale
- ✦ A changed version of the original chord, such as using Dm7 instead of Dm6. Sometimes the relationship is secondary: since Dm6 is a synonym of Dm6, Dm7 could be used in place of Bm7b5.
- ✦ Using a IIm7 in place of a V7 in a major key or substituting a V7 for a IIm7 in a minor key. See Substitution/[Interchangeable II and V](#).

COMBINING STEPWISE AND FOURTHS

Stepwise and fourths root movement can be combined. It is most familiar when the last chord before the target I chord is a V chord. So, the two progressions that generates are IV-V-I and VI-V-I.

In minor mode, the parent scale's IVma7 III7-VIm7 (Fma7-E7-Am7) becomes the minor key scale bVI7-V7-Im7. IIIIm7 of the parent scale (IIIIm7 of C) is commonly changed to III7 (of C), which becomes V7 of the key (V7 of Am).

The darker and bluesier parent scale IV7-III7-VIm7 (F7-E7-Am7) of the parent scale is bVI7-V7-Im7 in the key scale (Am). The IV7 (F7 of C) of parent scale is bVI7 of the key scale (F7 in Am) and is usually harmonized with melodic minor mode IV (Lydian flat seven).

The organization of the voicings shown here is based on [descend five and seven voicings](#). For voicings organized by the top voice, see the [IV-V-I Cadence Library](#) and the [VI-V-I Cadence Library](#).

THE SECONDARY DOMINANT CYCLE

Apply a melodic curve implied by the graphics below to each chord in the secondary dominant chord cycle. See [Secondary Dominant](#). The repeating pattern for the cycle is up a scale tone third to a dominant seventh, then up a perfect fourth to a scale-tone triad (the seventh letter of the scale will be represented with b VII major). In C, this would be: C-E7-Am-C7-F-A7-Dm-F7-Bb-D7-G-B7-Em-G7, then repeat.

Represent seventh chords with their triad basis (1-3-5) and substitute the b7 for a root only if the root can still be represented at least once. Learn to alter major scale-tone chords to make dominant sevenths on every step of a major scale and be aware of the changes that makes in the major scale.

Conforming Modes to the Relative Major and Minor System

To practice establishing temporary or permanent keys on each step of the major scale, each of the chords that follow a seventh chord in the Secondary Dominant Chord Cycle is standardized to a major (Ionian) or minor (Aeolian) scale. This means melodies for major chords will use a major scale on their root and minor chords will use Aeolian mode (also called natural minor). Aeolian mode places a tone center on the sixth step of a major scale, so D Aeolian has the same notes as the F major scale and B Aeolian has the same notes as the D major scale. I usually make an exception with scale tone five and leave it in Mixolydian mode. So a Secondary Dominant Cycle for C major, would use the C major scale for a G major chord, but the scale would use the mode name “G Mixolydian”.

For scale tone seven, use a major chord on flat seven. Use a major scale on the root of the chord on flat seven. In Secondary Dominant Cycle for C major, the seventh step would be a Bb major chord with a Bb major scale.

SUBSTITUTE CHORDS

Chord on the Third

In effect, this adds an upper harmony. C and Em = Cma7. C and Em7 = Cma9. Dm and F = Dm7. Dm and Fma7 = Dm9.

Chord on the Sixth

Similarly to the chord on the third above, this adds a harmony below the original root.

Flat Five Substitute

Flat five substitutes replace a dominant type chord with another dominant type chord a root a flat fifth above or below (which produces the same note) the chord they replace.

When three consecutive chords have root movement in perfect fourths, the first and third chords have roots a whole step (two frets) apart. When, in such a case, the first and third chord are of the same quality, the middle of the three chords could be replaced with one that constitutes a chromatic root movement between three chords of the same quality. This commonly occurs by replacing IIIIm7-VIm7-IIIm7 with IIIIm7-bIIIm7-IIIm7. Another is V-I-IV, replaced with V-bV-IV. In either case the substitute chord is a flat five substitute.

Diminished Seventh Substitutes

stepwise diminished voicing

Diminished seventh chords progress best from a whole step above or a half step below the chord they precede.

chromatic diminished voicing

Diminished seventh chords can vary the quality of a dominant type chord by playing a diminished seventh version before it. They are commonly used in the progression I7-I°7-IIIm7b5-I, or its reverse order: I-IIIm7b5-I°7-I7.

The voice leading in I7-I°7-IIIm7b5-I is that the second chord descends the three notes other than the root chromatically (by one fret), then the third chord descends the notes other than the root chromatically again. Finally, the voices move to the nearest tones of a I major chord.

Turnarounds

alternate chords make turnarounds more interesting

The $\text{IIIIm7-VI7-IIIm7-V7}$ or III7-VI7-II7-V7 cadences are often voiced where the II-V chords are voiced up a whole step for the III-VI chords.

III	VI	II	V	I
IIIIm7	VIIm7 (or VI7)	IIIm7 (or II7)	V7	I
IIIIm7 (or IIIIm7b5)	VI7 or III°7	IIIm7 (or IIIm7b5)	V7 or II°7	I
IIIIm7	bIIIIm7 (or bIII7)	IIIm7	bII7 or V7 (or VIm7)	I
III7	VIIm7	IIIm7	V7	I
#V°7 (III7b9 nr)	VIIm7	IIIm7	V13/b9 (b9 in bass)	I

CHROMATIC VOICE LEADING

A Chromatic Chord Between Chords of the Same Quality

Chromatic chords between chords of the same quality is used extensively in [Building Cadences with Chromaticized Bass](#).

Tertian triads, quadrads and pentads are constructed in thirds (every other scale tone). Tertian triads are three-note chords built in thirds, tertian quadrads are four-note chords built in thirds and tertian pentads are five-note chords.

There are a few instances of triads or seventh chords built on two consecutive scale tones of seven-tone (heptatonic) scales. A chromatic chord may be inserted between two chords of the same quality whose roots are a whole step apart, filling a whole step with three chords progressing in half steps of the same quality. Parallel voicing is usually used, being the common practical choice. With this voicing, all tones move up and down chromatically (a half step at a time).

Major scale has the following consecutive chords of the same quality: IIm and IIIm; IIm7 and IIIm7. Melodic minor scale has many consecutive chords of the same quality: Im and IIm; IV and V major; IV7 and V7; IV9 and V9; VI^{dim} and VII^{dim}; VI^{m7b5} and VII^{m7b5}.

The only consecutive pentad in common use is the IV9 and V9 in melodic minor, ascending form. Melodic minor ascending is major scale with flat three. In classical music and sometimes elsewhere, the descending form of melodic minor is the same as Aeolian or natural minor (1-b7-b6-5-4-b3-2-1). In jazz, the ascending form (major flat three) is used for both ascending and descending.

Enharmonic notes are those with optional names with accidentals, such as F# and Gb or Cb and B. As with single notes, sharps the middle note of the three chromatic tones is sharp in ascending and flat in descending. When a natural note is a choice for the middle note, such as C-B-Bb versus C-Cb-Bb, the natural choice is best (C-B-Bb preferred over C-Cb-Bb).

IIm(m7, m9) and IIIm(m7, m9)

In either case, a chord progression may connect IIm and IIIm or IIm7 and IIIm7 chords with a chord of the same quality in-between.

connecting IIm and IIIm, ascending and descending

IIm Dm7 V	#IIm D#m VI	IIIm Em VII	IIIm Em7 VII	bIIIm Ebm7 VI	IIm Dm7 V
1 5 1 b3	1 5 1 b3	1 5 1 b3	1 5 b7 b3	1 5 b7 b3	1 5 b7 b3

connecting IIm7 and IIIm7, ascending and descending

IIm7 Dm7 V	#IIm7 D#m7 VI	IIIm7 Em7 VII	IIIm7 Em7 VII	bIIIm7 Ebm7 VI	IIm7 Dm7 V
1 5 b7 b3	1 5 b7 b3	1 5 b7 b3	1 5 b7 b3	1 5 b7 b3	1 5 b7 b3

IIIm9 is not commonly used, since the ninth would be a #4 of the parent scale. When it is used, it follows the same rules. Doesn't the progression below sound a little odd?

connecting IIm9 and IIIm9 (uncommon), ascending and descending

IIm9 Dm9 III	#IIm9 D#m9 IV	IIIm9 Em9 V	IIIm9 Em9 V	bIIIm9 Ebm9 IV	IIm9 Dm9 III
1 b3 b7 2 5	1 b3 b7 2 5	1 b3 b7 2 5	1 b3 b7 2 5	1 b3 b7 2 5	1 b3 b7 2 5

IV (7, 9) and V (7, 9) triads

connecting IV and V, ascending and descending

These occur in major scale and in melodic minor (ascending form).

connecting IV7 and V7, ascending and descending

These occur in melodic minor and in progressions with changing modes, where the V chord is key scale major (chord scale V Mixolydian) and the IV chord is key scale Dorian (chord scale IV Mixolydian).

connecting IV9 and V9 (melodic minor = major b3), ascending and descending

Like the IV7 and V7 chromatically connected progressions above, these occur in melodic minor and in progressions with changing modes, where the V chord is key scale major (chord scale V Mixolydian) and the IV chord is key scale Dorian (chord scale IV Mixolydian).

melodic minor VI and VII

These occur in melodic minor. VI diminished or VIm7b5 can be used as a secondary on the third of a melodic minor IV chord (IV9 no root is VIm7b5). Likewise, VII diminished or VIIm7b5 can be used as a secondary on the third of a melodic minor IV chord (IV9 no root is VIm7b5).

connecting VI dim. and VI dim., ascending and descending

VI dim. (IV7 no root)	#VI dim. (#IV7 no root)	VII dim. (V7 no root)	VII dim. (V7 no root)	bVII dim. (bV7 no root)	VI dim. (IV7 no root)
A dim. IV	A# dim. V	B dim VI	B dim VI	Bb dim. V	A dim. IV
F7 no root IV	F#7 no root V	G7 no root VI	G7 no root VI	Gb7 no root V	F7 no root IV

connecting VIm7b5 and VIm7b5, ascending and descending

VIm7b5 (IV9 no root)	#VIm7b5 (#IV9 no root)	VIIIm7b5 (V9 no root)	VII dim. (V9 no root)	bVII dim. (bV9 no root)	VI dim. (IV9 no root)
Am7b5 II	A#m7b5 III	Bm7b5 IV	Bm7b5 IV	Bbm7b5 III	Am7b5 II
F9 no root II	F#9 no root III	G9 no root IV	G9 no root IV	Gb9 no root III	F9 no root II

Diminished Ascending Chromatic Voice Leading

Ascending a whole step root movement with chords of different quality can use a diminished seventh chord rooted on the chromatic note between.

IV7-#IV°7-I

#IV diminished seventh (#IV°7) is commonly played in jazz and jazz blues during the later part of a IV chord. Since #IV°7 is equivalent to I°7, it creates parallel chromatic voice leading back to the I7 chord. In I°7, three and five are flat; seven is double flat (bb7 = 6). Each of the tones of the I°7 (= #IV°7) move up a half step *except* the root: b3 to 3, b5 to 5 and bb7 to b7.

This same voice leading occurs by using IV7b9, since IV7b9 no root is the same as #IV°7. Because of this, an improvised accompaniment can use #IV diminished seventh during the later part of IV7 *even if the bass player stays on the root of IV*. If the bass player is playing the root of IV and a chordal instrument plays #IV°7, the composite is IV7b9.

See the [IV7-#IV°7-I7 Library](#).

IVm7-#IV°7-Im7

Similar to the IV7-#IV°7-I progression above, this chromatically voice-leads the #IV°7 to I7. The third, fifth and seventh each ascend chromatically. In this case, the #IV°7 is not a subset of a larger IV chord. More care should be taken to play what is compatible with the rest of the arrangement and not indiscriminately use a #IV°7 when IVm7 is played by the other musicians.

See the [IVm7-#IV°7-I7 Library](#).

IIm7-#II°7-I7/3

This is an *alternate* chord progression for the common IIm7-V7-Ima7 (or I7) progression. It is not a usable *substitute* chord progression and should not be played at the same time that other musicians play IIm7-V7-I7. The second chord would be in direct conflict with the V7 chord. To illustrate this, V7b9 contains all of the notes of II°7, all of which are a half step below the tones of #II°7. This would create an unacceptable dissonance.

See the [Major IIm7\(b5\)-#II°7-I7 Library](#).

Descending Diminished Chromatic Voice Leading Within One Chord

See [Descending Diminished](#).

Descending Chromatic Voices

Descending whole step root movement with chords of different quality can be usually use a dominant seventh type chord rooted on the chromatic note between.

CADENCE LIBRARIES

II-V-I LIBRARY

Playing the major scale-tone 7-3-6-2-5-1 chord progression is a great way to practice minor II-V-I and major II-V-I (251) in one fell swoop. Minor II-V-I is derived from the parent major scale-tone chords VIIIm7b5-IIIm7-VIm (Bm7b5-Em7-Am7). By establishing the key on VIm of the major scale, VIIIm7b5-IIIm7-VIm becomes IIm7b5-V7-Im (Bm7b5-E7-Am7). So, Bm7b5-E7-Am7 is VIIIm7b5-IIIm7-VIm in the C major parent scale and Bm7b5-E7-Am7 is IIm7b5-V7-Im in the A minor key scale.

III is commonly changed from III minor (Em in the key of C) to III major (E) or dominant (E7).

This changes the major scale-tone original chords to VIIIm7b5-IIIm7-VIm, which are IIm7b5-III7-Im in the key of VIm. Common alterations of the parent major III chord, as used in a minor key are #5, b9, #9 (E7#5, E7b9, E7#9, or combinations such as E7#5b9 or E7#5#9).

I7nr-I dim7nr-IIIm7b5-I major, 3-Note by String Set

The third chord is abbreviated with IIdim for this three-note voicing. The four-note voicing has the root of the first and last chords in every chord, while the IIdim would need to be IIIm7b5 to include the root of the I7 and I major chord.

And Your Bird Can Sing-bridge

♩ = 120

bridge *p*

The score is in 4/4 time with a tempo of 120. It features a melody in the treble clef and a bass line in the bass clef. The melody starts with a half rest, followed by a series of eighth notes and quarter notes. The bass line consists of a series of quarter notes. Chords are indicated above the staff: G#m, G#m(maj7), G#m7, and G#m6. A box labeled 'bridge' and 'p' (piano) is placed over the first measure.

Autumn Leaves

♩ = 125 Swing Eighths

The score is in 4/4 time with a tempo of 125. It features a melody in the treble clef and a bass line in the bass clef. The melody starts with a half rest, followed by a series of eighth notes and quarter notes. The bass line consists of a series of quarter notes. Chords are indicated above the staff: Cm7, F9, Bbmaj7, Ebmaj7, Am7(b5), D7(b9), Gm, Gm9(ma7), Gm7, Gdim7, Gm6, Abma7, Ebdim7, Adim7, Gm7(ma7), Gm7, Gm7(ma7), Cm7, F9, Bbmaj7, Ebmaj7, Cm, Cm(ma7), Cm7, F13, F7/C, Dm, Dm(ma7), Dm7, Eb6/9, Am7(b5), D7(b9), Gm7, Gb7, F7(sus4), E7(b5), Am7(b5), D7(b9), Gm, Gm9(ma7), Gm7, Gm. The score is divided into measures 1-4, 5-8, 9-12, 13-16, 17-20, and 21-24.

Ballad of A Thin Man

$\text{♩} = 90$ Swing Eighths

Chords: Bm, Bm(maj7), Bm7, E7

The score is in 4/4 time with a tempo of 90 beats per minute. The key signature has two sharps (F# and C#). The melody is written on a single staff, and the bass line is on a separate staff. The bass line consists of eighth notes and quarter notes, with some triplets. The melody features eighth notes and quarter notes, with some triplets. The chords are indicated above the melody.

Being for the Benefit of Mr. Kite-beginning of verse

$\text{♩} = 111$ Swing Eighths

Chords: Cm, G+, Bb, Dm/A, G

The score is in 4/4 time with a tempo of 111 beats per minute. The key signature has three flats (Bb, Eb, and Ab). The melody is written on a single staff, and the bass line is on a separate staff. The bass line consists of eighth notes and quarter notes. The melody features eighth notes and quarter notes. The chords are indicated above the melody.

My Funny Valentine section A

$\text{♩} = 90$ Swing Eighths

The score is in B-flat major, 4/4 time, with a tempo of 90 beats per minute and a swing feel. It consists of two systems of music. The first system has four measures, each with a chord: Cm, Cm9(ma7) (highlighted in red), Cm7, and Cm9/6. The second system has seven measures with chords: A♭maj7, A♭maj9, G7(sus4), Fm9, Fm7/Eb, Dm7(b5), and G7. The bass line is written on a grand staff (T, A, B) with fingerings indicated by numbers 1-5. The treble line has a key signature of two flats and a common time signature.

Oye Como Va

$\text{♩} = 115$
"A" Dorian

The score is in D minor, 4/4 time, with a tempo of 115 beats per minute. It features a melodic line in the treble and a bass line in the grand staff (T, A, B). The melody includes triplets and a 'play 3 times' instruction. Chords are indicated above the staff: Am7, Am(maj7), D9(sus4), D9, Am7, Am(maj7), Am7, and Am6. The bass line includes fingerings (1-5) and a triplet of 3s at the end.

CHROMATIC ASCENDING MINOR LIBRARY

The versions shown here each ascend chromatically from the fifth to the flatted seventh of a minor chord. For the “James Bond” version, change the last chord to the same as the second chord:

four-note ascending chromatic from the fifth of a minor chord

James Bond version

with the alternate name for “F”

The traditional name for a minor chord with a chromatically raised fifth is a major chord named after the “#5” note (“F”).

- **Multi-Key II-V Cadences in Repertoire**
- **Back Cycling with Dominant Sevenths**
- **Back Cycling with II V Pairs**
- **Back Cycling Thirds**

BACK CYLCING WITH MAJOR SCALE-TONE FOURTHS

Memorize the major scale tone chord qualities and their order in fourths. With back cycling, you need to determine which chord is before a particular chord in the ascending root progression in fourths. In the key of "F", for example the IIm7 chord is Gm7. The Am7 chord before it can be used melodically or compositionally to lead to it. As a secondary dominant, Am7 could be changed to A7.

Using the 7-3-6-2-5-1-4 Series

Major scale-tone chords with their roots ascending in perfect fourths use the number series 7-3-6-2-5-1-4. Major scale-tone seventh chords for Bb major are shown below with their roots ascending in perfect fourths. Note that the cycle continues through both rows.

VIIIm7b5 Am7b5 X b5 b7 b7 1	IIIIm7 Dm7 X 1 b7 b3 5	VIIm7 Gm7 VIII 5 b3 b7 1	IIIm7 Cm7 VIII 1 b7 b3 5	V7 F7 VI 5 3 b7 1	IIma7 Bbma7 VI 1 7 3 5	IVma7 Ebma7 IV 5 3 7 1

II-V-I Turnarounds For All Seven Major Scale-Tone Chords

At times, you may find it useful to think in different contexts for all of the chords in the cadence in terms of (1) the parent scale, (2) altered parent scale for the V chord, (3) the chord scale for the dominant V mode, (4) the unaltered II-V of the target chord and (5) the altered II-V of the target chord. The unaltered parent scale for all of the chords in the table below is I major.

target	VIIIm11b5b9	IIIIm11b9	VIIm9	IIIm9	V9	IIma9	IVma9
seventh tones of parent	7246	3572	6135	2461	5724	1357	4613
unaltered V of	IVma9	VIIIm7b5 (VIIIm11b5b9)	IIIm7 (m11b9)	VIIm9	IIIm9	V9	IIma9
dominant V of	IV9	VII#5#9	III7b9	VI9	II9	V9	I9
altered parent scale	I major b3 (mel. min)	I major b3 (mel. min)	I major #5 or I major b6	I major #1*	I major #4	no change	I major b7
dominant V mode	IV Lydian dominant	VII super Locrian	III Phry. dom. or III super Phry.	VI Aeolian dominant	II Mixolydian (II mel. minor)	V Mixo.	I Mixo
unaltered II V of	IIma9-IVma9	IVma9-VIIIm11b5b9	VIIIm11b5b9 IIIIm11b9	IIIIm11b9-VIIm9	VIIm9-IIIm9	IIIm9-V9	V9-IIma9
II-dominant V of target	IIma7-IV9(13#11)	IVma9-VII#5#9	VIIIm11b5b9 III7b9	IIIIm11b9-VI9	VIIm9-II9	IIIm9-V9	V9-I9

BACK CYCLING WITH DOMINANT SEVENTHS

"Back-Cycling" Defined

Back-cycling is planning a series of chords in a series with a target in mind. It is most often a series of chords with their roots ascending in perfect fourths. Perfect fourths use the major scale number cycle 7362514. Extending perfect fourths beyond the scope of the major scale produces the longer series #4-7-3-6-2-5-1-4-b7-b3-b6-b2-b5. Perfect fourths use the major scale letter cycle BEADGCF (bead go-catch-fish). Extending the letter cycle beyond the scope of the major scale produces the series B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb.

The 12-Chord Cycle of Dominant Sevenths in C

notice that the notes on the third string descend chromatically.

notice that the notes on the second string descend chromatically.

#IV7 F#7 XV 	VII7 B7 XIV 	III7 E7 XIII 	VI7 A7 XII 	II7 D7 XI 	V7 G7 X 	continued below
I7 C7 IX 	IV7 F7 VIII 	bVII7 Bb7 VII 	bIII7 Eb7 VI 	bVI7 Ab7 V 	bII7 Db7 IV 	bV7 Gb7 III

Flat Five Substitutes

A flat five substitute uses a bII of a target, instead of a V of target. See [Substitution](#)/Flat Five Substitute.

When chords progress with their roots ascending in perfect fourths, each chord can be considered the fifth of the next chord. With Dm7-G7-Cma7 in the key of C, for example, G7 is the V7 chord. A flat five substitute for G7 would be Db7, making the replacement chord (Db7) a flattened second of the chord it precedes. Db7 is a bII7 of C.

In the longer progression Em7b5-A7-Dm7-G7-Cma7, where A7 is V7 of Dm7 and G7 is V7 of Cma7, A7 could have the flat five substitute Eb7 and G7 could have the flat five substitute Db7, making Em7b5-Eb7-Dm7-Db7-Cma7.

Targeting a Chord

the 12-note cycle of ascending perfect fourth progression

The order of ascending fourths with, the major scale is 7-3-6-2-5-1-4. Extending perfect fourths to include all chromatic notes creates the cycle #IV-VII-III-VI-II-V-I-IV-bVII-bIII-bVI-bII-bV. Since the thirteenth root, flat five (b5), is equal to the first root , sharp four (#4), flat five (bV) can be replaced with sharp four (#IV) and repeat the series cyclically.

the cycles of flat five substitutes the 12-note ascending perfect fourth progression

There are two series of flat five substitute target roots, “#4-3-2-1-b7-b6-5” and “4-b3-b2-7-6-5”, as shown on the table below. When the flat five substitutes are added between the target roots, a chromatic progression is produced. Any one of the target roots could be used as a key.

In the gray “#4-3-2-1-b7-b6-5” root progression, the white series of seventh chord flat five substitutes between them are “7-6-5-4-b3-b2” as you can see on the third row below.

In the white “4-b3-b2-7-6-5” root progression in the fourth row below, the gray series of seventh chord flat five substitutes that precede them are “b5-3-2-1-b7-b6” as you can see on the fifth row below (b5=#4).

original	#IV	VII	III	VI	II	V	I	IV	bVII	bIII	bVI	bII	bV
#4-3-2-1-b7-b6-5 targets	I		bVII		bVI		bV		III		II		I
	I	VII7	bVII	VI7	bVI	V7	bV	IV7	III	bIII7	II	bII7	I
4-b3-b2-7-6-5 targets		IV		bIII		bII		VII		VI		V	
	bV7	IV	III7	bIII	II7	bII	I7	VII	bVII7	VI	bVI7	V	bV7

Autumn Leaves example in fourths with flat five substitutes

Each of the target chords named above the staff (except not the D7 in bar six) is treated as a target. Three chords are used to setup for each target chord by back-cycling, using four roots in perfect fourths with the target as the fourth chord.

MULTI-KEY II-V CADENCES IN REPERTOIRE

Joe Pass and Wes Montgomery were my earliest inspirations for this [globabization](#). Extended cadences in fourths with [flat five substitutes](#) and stand-alone II-V chord changes would not be easily understood if played along with another chord progression and another bass line. They need to be used alone, not simultaneously with another chord progression, unless the second progression was composed to be made compatible. For that reason, they are used in solo guitar, such as Joe Pass style or in composition.

Joe Pass used them extensively in his solo guitar performances and when he accompanied Ella Fitzgerald. He used dominant chords with their roots progressing in perfect fourths as connective filler.

II-V is sometimes used as a stand-alone pair of chords without progressing to "I". Here's a list of songs in which they were used as part of the composition:

- 1931 - Just Friends (John Klenner, lyrics by Sam M. Lewis)
- 1943 - Speak Low, bars 9-12 (Kurt Weill)
- 1944 - Round Midnight (Thelonius Monk)
- 1945 - Groovin' High (Dizzy Gillespie)
- 1946 - Tenderly (Walter Gross)
- 1954 - Four (Miles Davis)
- 1955 - Joy Spring (Clifford Brown)
- 1956 - When Sunny Gets Blue (Marvin Fisher and Jack Segal)
- 1960 - West Coast Blues (Wes Montgomery)
- 1960 - Meditation (Antonio Carlos Jobim)
- 1960 - Four on Six (Wes Montgomery)
- 1964 - Girl from Ipanema, B section (Antonio Carlos Jobim)
- 1965 - Ceora (Lee Morgan)
- 1967 - Wave (Antonio Carlos Jobim)
- 1968 - Road Song, bar four of the B section (Wes Montgomery)
- 1973 - Valdez in The Country (Donny Hathaway)
- 1976 - Knocks Me off My Feet (Stevie Wonder)
- 1976 - Ordinary Pain (Stevie Wonder)

BACK-CYCLING WITH II V PAIRS

Use the IIm-V part of cadences shown in [Voice Leading/II-V-I Top Voice Leading](#). Tend to use the voicings with the root in the bass.

Back Cycling is Different with IIm V Pairs

Back-cycling is planning a series of chords in a series with a target in mind. It is more straight-forward when used in fourths. See [Back Cycling with Dominant Sevenths](#).

Voice Leading the Bass According to the II Chord

IIm-V pairs commonly voice-lead stepwise or chromatically down from the IIm chord of the IIm-V pair to a target IIm type chord, such as IIm7. This is commonly IIm V starting on IIIIm to setup the progression to II minor, or as IIIIm-VI7-bIIIIm-bVI to II minor. See [Jazz Bass Harmonization/Dorian Harmonized Bass Scale](#).

Voice Leading the Bass According to the V Chord

IIm-V pairs also voice-lead chromatically down from the V chord of the IIm V pair to a target dominant chord. See [Jazz Bass Harmonization/Mixolydian Harmonized Bass Scale](#).

bIIm7-bV7 to IV7

By using a flat five substitute for the V chord in a IIm-V pair, the pair becomes IIm7-bII7. See [Substitution/Flat Five Substitute](#).

BACK CYCLING THIRDS

Finding the Harmonic Roles of a Particular Scale Tone

To voice lead melodic tones on a chord progression, you need to recognize when a tone is in a chord and which chord tone it is (root, fifth, etc.). Learn to do this by “back-cycling thirds”, shown below.

back-cycling thirds in the major scale

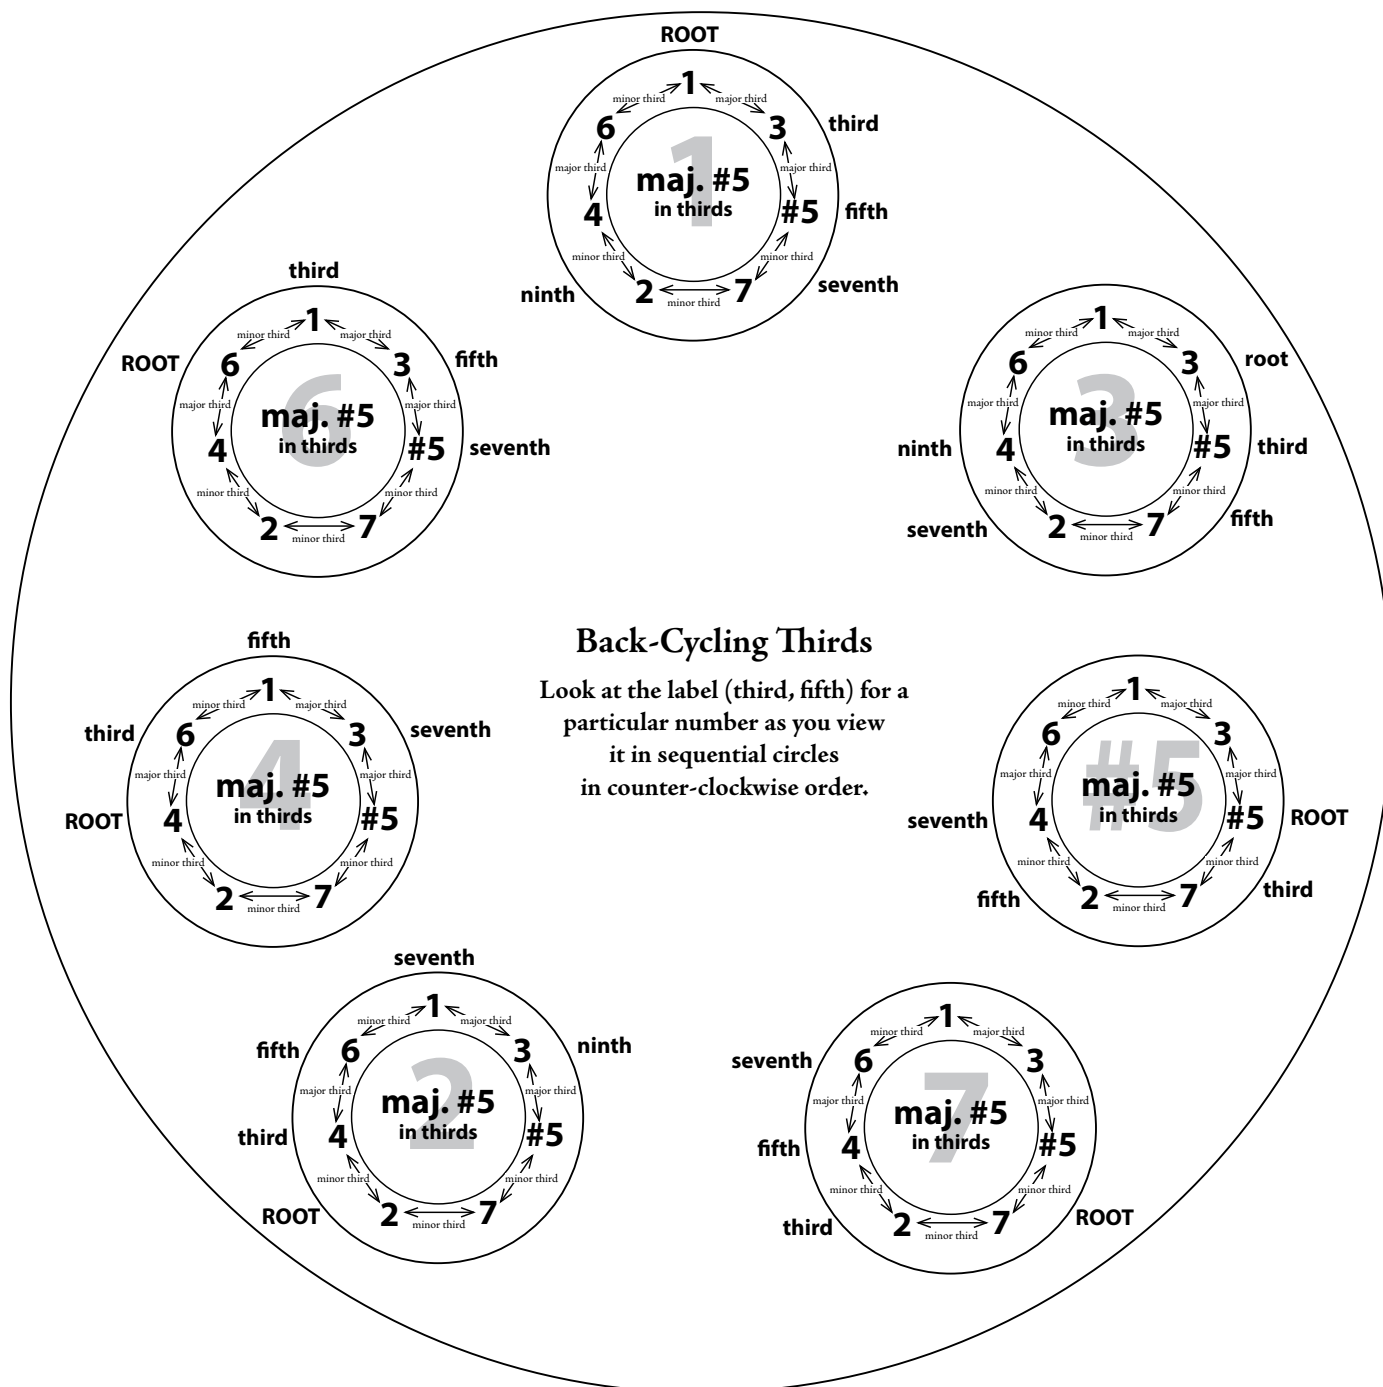

triad..... I major II minor..... III minor IV major V major VI minor VII dimin.
 seventh chord Ima7 IIIm7 IVma7 V7 VIIm7 VIIIm7b5
 ninth chord Ima9 IIIm9 no chord IVma9 V9 VIIm9 no chord

back-cycling thirds in the major sharp five and harmonic minor scale

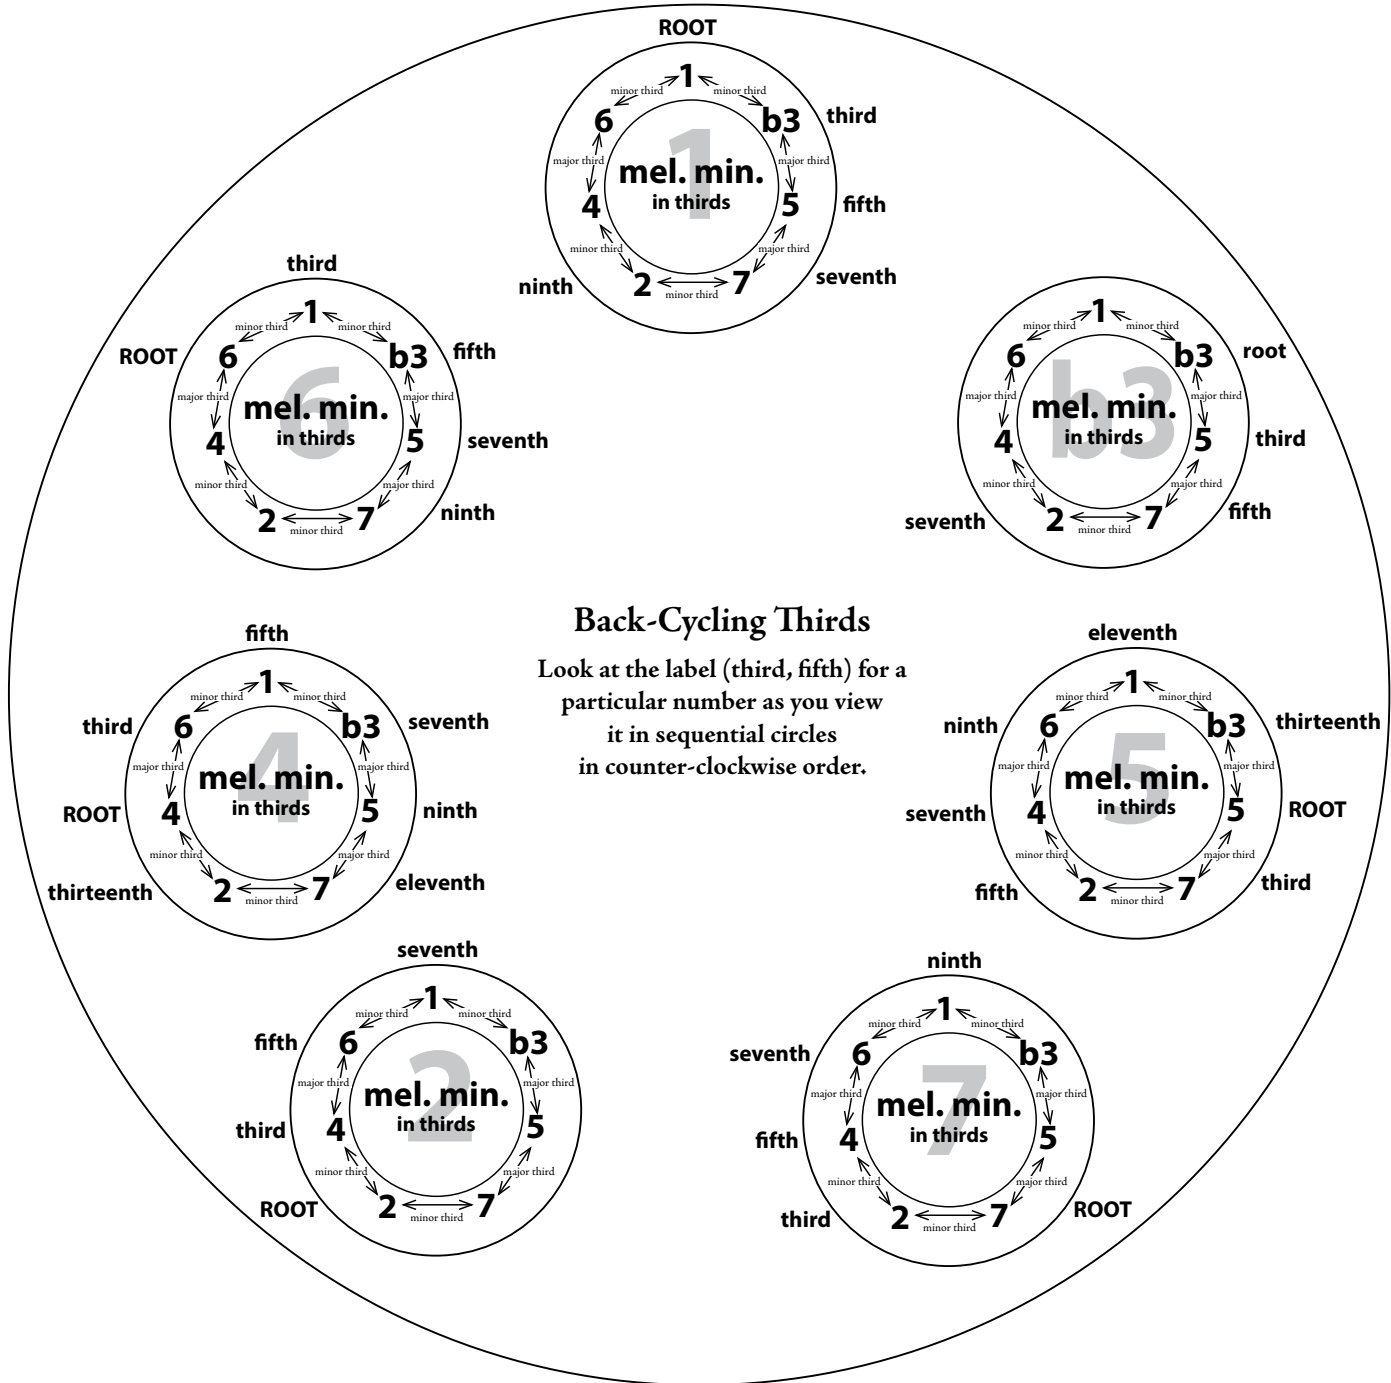

Harmonic minor is a mode of major sharp five scale as you can see in this table:

mode names	major #5	Dorian #4	Phryg. dom.	Lydian #2	Mixo. #1	Aeolian nat.7	Locrian nat.6

WHAT IS TOP-VOICE LEADING?

Chords with similar numbers of notes can be thought of as voices, as in a vocal or instrumental ensemble. A melodic line made from the series of the top note from each chord makes the soprano part or the “top voice” part. A melodic line made from the series of the bottom note from each chord makes the bass part. In four-voice harmony, the next to bottom note is the alto and the next to the top notes is the tenor.

The most prominent voice is usually the soprano, or top voice. Learn to voice chords so they make a melody with their series of top voice notes, sometimes doubling the main melody of the song or creating a counter melody.

HEPTATONIC VOICE LEADING

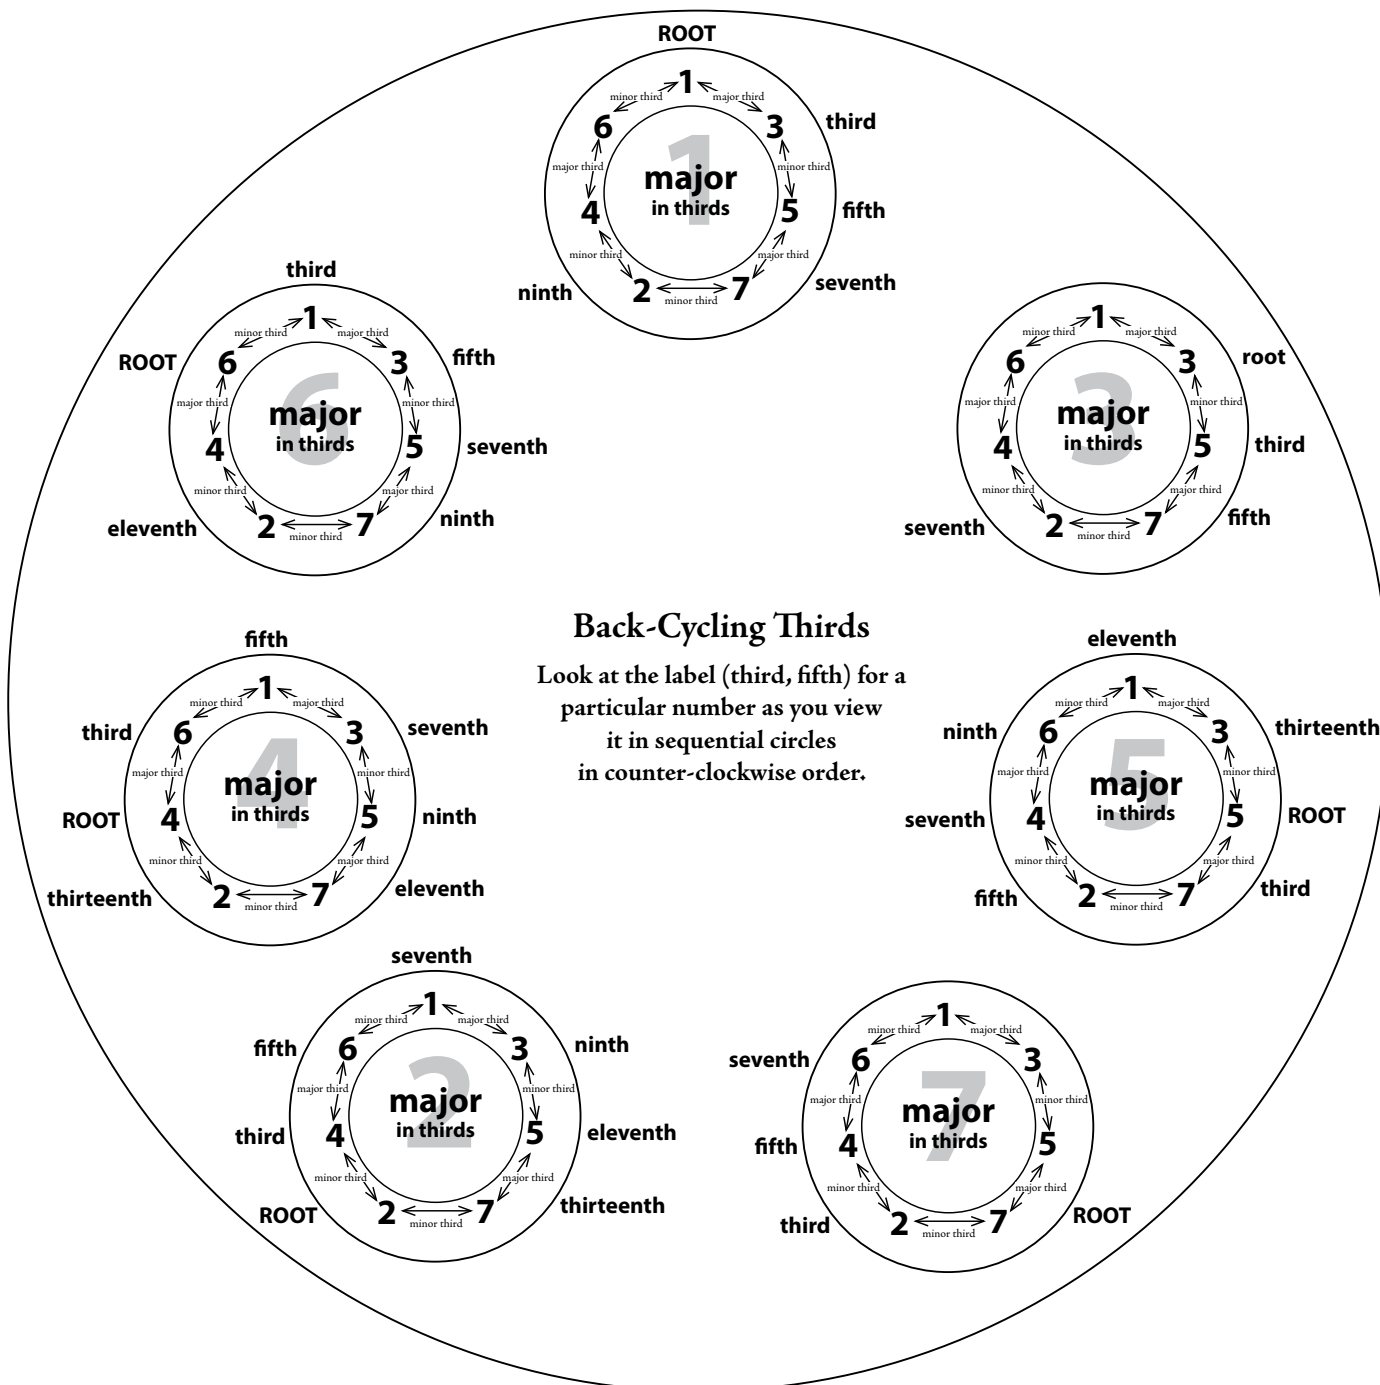

To voice lead melodic tones on a chord progression, you need to recognize when a tone is in a chord and which chord tone it is (root, fifth, etc.). Learn to do this by “back-cycling thirds”, shown below.

back-cycling thirds in the major scale

triad..... I major II minor..... III minor IV major V major..... VI minor VII dimin.

seventh chord Ima7 IIIm7..... IIIIm7 IVma7..... V7..... VIIm7 VIIIm7b5

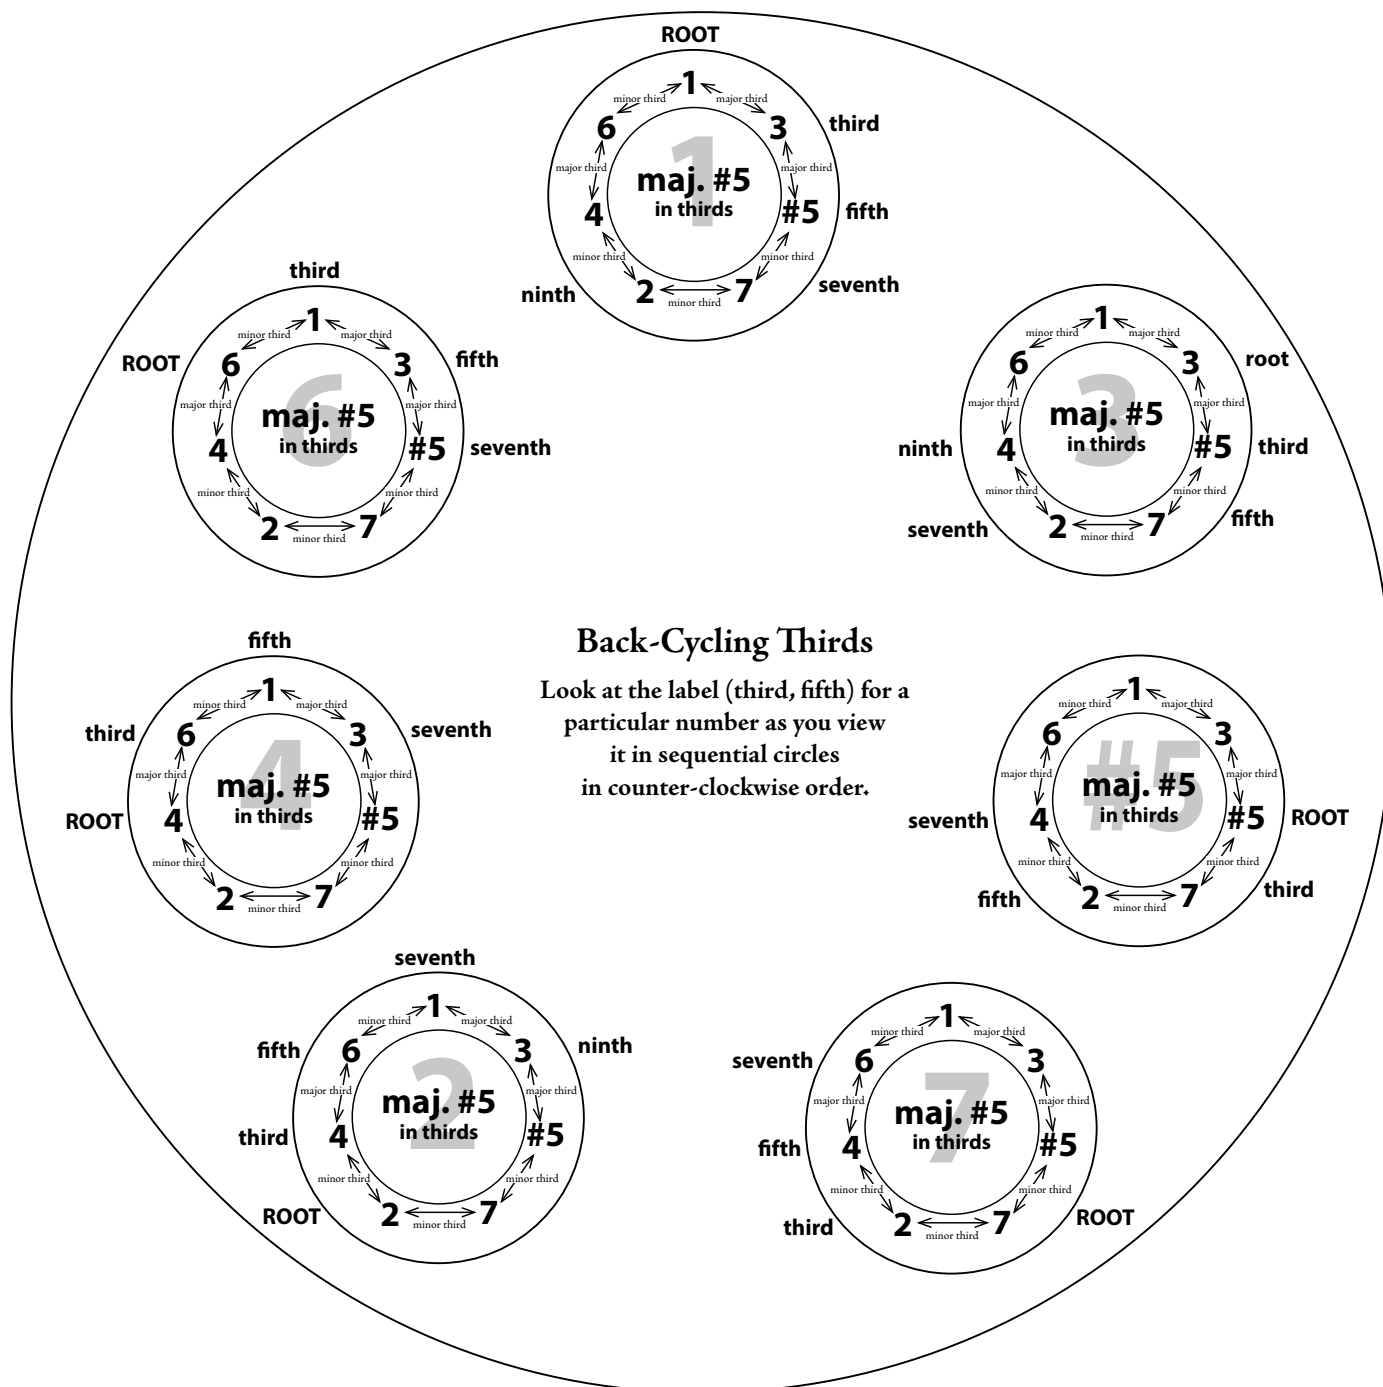

ninth chord Ima9 IIIm9..... no chord IVma9..... V9..... VIIm9 no chord

back-cycling thirds in the major sharp five and harmonic minor scale

Harmonic minor is a mode of major sharp five scale as you can see in this table:

mode names	major #5	Dorian #4	Phryg. dom.	Lydian #2	Mixo. #1	Aeolian nat.7	Locrian nat.6

DOMINANT CHORDS IN FOURTHS WITH FLAT FIVE SUBSTITUTES

Making Modal II-V-I Cadences with Three Sevenths in Fourths

This cycle features a chromatically-descending top voice. Each of the common target chords, I, IV, V, II and VI can be cadenced as a II-V-I with three dominant seventh chords in perfect fourths. Use the cycle of fourths 7-3-6-2-5-1-4 (key scale numbers), such as B-E-A-D-G-C-F for C major. Three numbers in a row in the cycle, such as 7-3-6, 3-6-2 or 6-2-5 can make a substitute for a II-V-I cadence to a target. To target the VI chord with a II-V-I, use the cadence VII7-III7-VI7. These are jazz blues chord changes with dominant sevenths. They could also be used with major scale-tone qualities VIIm7b5-IIIIm7-VIm7 or a combination such as VIIIm7b5-III7-VIm7.

Each chord that is changed from another quality to a dominant seventh becomes a secondary dominant. See the chapter [Secondary Dominant](#).

TOP-VOICE-LEAD ANY CHORD WITH ANY KEY TONE

Table of All Top-Voice Cadences

chord root , top-voice numbering and parent scales

The chord roots numbered at the top of the columns and the top-voice tones numbered in a gray box at the left of each row group are numbered in terms of the parent scale. See [Key Scales, Parent Scales and Chord Scales/Parent Scale](#). The top-voice numbers after a back slash (“\”) in each chord name are in the key of the chord root.

every chromatic root of a key is shown in a column, labled at the top of the column

Each Roman numeral at the top of a column shows the step of the key scale on which a chord is built. These follow across each set of two facing pages. These are shown in an order of fourths so that any three in a row can make a modal II-V-I cadence to the third chord as a target “I” chord.

Since columns organize the chord roots in perfect fourths, any three consecutive chords in a row can be used as a II-V-I cadence, where the third chord is the temporary key (or permanent key if the duration and emphasis is great enough).

“back slash” (“\”) chords

The top voice tone for each chord in the table is shown by number after a backslash (“\”). “7b9\b2” is a seven flat nine chord with “b2” in the key of the chord root as the highest pitch. With the root on “C”, “7b9\b2” would be C7b9\Db specifying a chord with C-E-G-Bb-Db where “Db” is the highest pitch. Forward slash chords specify a bass note, where C7/Bb is a C7 chord with “Bb” in the bass. These two forms of slash can be combined. “C7/Bb\E” is a C7 chord with “Bb” in the bass and “E” as the highest pitch.

every top-voice tone of a key is shown in a row

Each Arabic numeral in the gray box at the upper left of a row group shows the top voice in the key scale. Some top-voice tones are not compatible with the unaltered scale-tone chord qualities built on a particular numbered tone, indicated by “n/a”. #5 or b9 is not acceptable on a minor chord. Natural three is not acceptable on a minor chord. When the unaltered scale tone chord doesn’t contain the desired top voice, a secondary dominant or flat five substitute chord can be used, as shown in the middle and bottom rows of each group.

the “SD” rows show secondary dominants

Secondary dominant versions are particularly used in bebop, blues and related styles. They dramatize the progression to a chord whose root is up a perfect fourth, so the current chord is a V chord of its target. See [Secondary Dominant](#).

Secondary Dominant (“SD”) Rows and Mood

Using alternate chords from the secondary dominant row makes a cadence more dramatic and stronger. See the Secondary Dominant chapter. The secondary dominant chords are darker in mood. Don't change moods too frequently. A few dark consecutive altered dominant chords can move to a major seventh, sixth or other chord of a bright mood with a pleasing effect. A three-chords sequence with dark angry chord to bright happy chord to dark angry chord can be confusing, especially if the change is fast. The effect of mood changes is time-based, so take that into account in sequencing chords in an arrangement.

Using Flat Five Substitutes

After each roman numeral at the top of a column, the alternate flat five tone is shown. This indicates that you should consider the alternative flat five chord by looking at the column with the numbered tone suggested as a flat five substitute. See [Substitution/Flat Five Substitute](#).

flat five substitute (“b5 sub.”) rows

Chords from the flat five substitute provide an alternate for the secondary dominant. The flat five substitute chords are usually dominant type or altered dominant chord with their chord root on a note a flattened fifth from the secondary dominant chord. In some cases, they are 7sus4 or major seventh to accommodate the needed top voice tone.

FINGERING ANY CHROMATIC TOP VOICE WITH ANY CHROMATIC ROOT

This is a graphic expression of the top voice table in the previous section. It shows harmonizations for every chromatic root in a key and for every chromatic top voice. Each player and style may use different qualities and voicings to satisfy the same chromatic roots and chromatic top voices. It shows the collective harmonic awareness of great chord melody players, including Joe Pass, Barney Kessel, Wes Montgomery, Martin Taylor, Tuck Andress and Ted Greene.

TOP VOICE SEQUENCES ON 7-3-6-2-5-1-4

Think of These Sequences as a Game

Using the “Table of All Top-Voice Cadences” in the previous section, “[Top-Voice Lead any Chord with Any Key Tone](#)”, the sequences below repeat at top voice sequence, such as a “3-2-1” fragment (any three consecutive descending scale tones), scale tones 3-2-1 (literally) or “1-b7-5”.

Serial Sequences

Three-note top voice sequences such as the “3-2-1 key scale tone” sequence below are an endless cycle.

C major top voice example with “3-2-1” key scale tones

root	VII	III	VI	II	V	I	IV
top voice	3	2	1	3	2	1	3
chord name	Bm7b5sus4 IX	E7b9 IX	Am7 X	Dm9 X	G9 IX	C6 VIII	Fma7 VIII
	1 b5 b7 4	5 b2 3 b7	1 b3 b7 b3	1 b7 b3 5 2	1 3 b7 2 5	1 3 6 1	1 5 1 3 7
root	VII	III	VI	II	V	I	IV
top voice	2	1	3	2	1	3	2
chord name	Bm7b5 IX	E7#5 XII	Am7 XII	Dm7 X	G7sus4 X	Cma7 X	F6 VIII

II-V-I CADENCES IN MAJOR KEY BLUES

The cadence chord names are below the staff. Use each diagram to locate the circled note on the root according to its letter name in the chord name. “D7#5” in “top voice b7-b7-1, the first example below shows its root “D”, which should be placed on the sixth string, tenth fret.

Top-Voicing Leading Cadences in I-IV-V Major Key Blues in C using the Charleston rhythm family with two different notes in each top-voiced cadence

[click this link to play the video](#)

top voice b7-b7-1; cadence rhythm: 3-4-1; comping rhythm: Charleston

Swing Eighth 11/13 = 105

11/13 = 105

D7(#5) G7(#9) C9

6/18 F9 7/19 C7 8/20 A7(b9) 9/21 Ab9

10/22 G7(sus4) 11/23 F9 12/24 C7

Ab9 is a flat five substitute for D7

summary progression

There are three, three-chord cadences in each example. To summarize the chords used in the example above, play the first two chords of the third cadence, then all three chords of the second cadence, as shown below:

A7b9 XI	Ab9 X	G7#9 VIII	C7 VIII	F9 VII
1 3 b7 b2	1 3 b7 2	1 3 b7 #9	5 b7 3 b7	3 b7 2 5

2

top voice b3-b3-1; cadence rhythm and after 2-4-1; comping rhythm: Blues By Five

25/37 $A\flat 9$ $G7(\sharp 9)$ $C7$ p $G7(\sharp 9)$ $C13(\sharp 9)$

$E7b9$ X	$Eb7$ X	$Dm7$ IX	$G7$ IX	$C9$ VII

top voice 6-6-5; cadence rhythm and after 2-and after 3-and after 4; comping rhythm: Cold Sweat

The musical score for 'Cold Sweat' is written in 4/4 time and G major. It consists of three systems of music, each with a treble clef and a key signature of one sharp (F#).

System 1 (Measures 73-85):

- Measure 73: f Am7 (Fingering: 1 3 4, b7 b7 1 5)
- Measure 74: D13 (Fingering: 1 3 4 4, b7 3 6 2)
- Measure 75: G9 (Fingering: 1 2 2 2, 3 b7 2 5)
- Measure 76: p C9 (Fingering: 1 3 b7 2, 2 3)
- Measure 77: C9 (Fingering: 1 3 b7 2, 2 3)
- Measure 78: f D13 (Fingering: 1 3 4 4, b7 3 6 2)
- Measure 79: G13 (Fingering: 1 2 3 4, b7 3 6 2)
- Measure 80: C9 (Fingering: 1 3 b7 2, 2 3)

System 2 (Measures 81-93):

- Measure 81: C9 (Fingering: 1 1 1 1, b7 b7 5 1)
- Measure 82: p C9 (Fingering: 1 2 2 2, 3 b7 2 5)
- Measure 83: G9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 84: f Em7 (Fingering: 1 2 3, b7 3 6 1)
- Measure 85: A9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 86: D13 (Fingering: 1 2 3, b7 3 6 1)

System 3 (Measures 87-94):

- Measure 87: D13 (Fingering: 1 2 3, b7 3 6 1)
- Measure 88: p C9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 89: C9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 90: G9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 91: G9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 92: G9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 93: G9 (Fingering: 1 2 3, b7 3 6 1)
- Measure 94: G9 (Fingering: 1 2 3, b7 3 6 1)

summary progression

There are three, three-chord cadences in each example. To summarize the chords used in the example above, play the first two chords of the third cadence, then all three chords of the second cadence, as shown below.

The summary progression shows five three-chord cadences, each with a treble clef and a key signature of one sharp (F#).

Cadence 1: Em7 XII (Fingering: 1 1 1 1, b7 b7 5 1) → A9 XI (Fingering: 1 2 2 2, 3 b7 2 5) → D13 X (Fingering: 1 2 3 4, b7 3 6 2)

Cadence 2: G13 IX (Fingering: 1 2 2 4, 3 b7 2 6) → C9 IX (Fingering: 1 2 3 4, 1 3 b7 2)

top voice 4-4-5; cadence rhythm 3-and after 3-and after 4; comping rhythm: guaguanco bell

The musical score is written in 4/4 time and consists of three staves. The top staff shows measures 97-101, the middle staff shows measures 102-105, and the bottom staff shows measures 106-110. Chord diagrams are provided for each measure, showing the top voice line and the comping rhythm. The chords are: Am7, D7, G9, C9, Dm7, G7(sus4), C9, C9, G7, G9, E7(#5), Eb13, D13, D13, C9, G9, and D13. The score includes dynamic markings (f, p) and articulation (accents, slurs). A note indicates that Eb13 is a flat five substitute for D7.

summary progression

There are three, three-chord cadences in each example. To summarize the chords used in the example above, play the first two chords of the third cadence, then all three chords of the second cadence, as shown below.

The summary progression shows five three-chord cadences, each with a chord diagram and a Roman numeral:

- Em7#5 XII: Chord diagram shows top voice 1, 2, 2, 4. Roman numeral XII.
- Eb13 XI: Chord diagram shows top voice 1, 2, 3, 4. Roman numeral XI.
- Dm7 X: Chord diagram shows top voice 1, 2, 3, 4. Roman numeral X.
- G7sus4 X: Chord diagram shows top voice 1, 2, 3, 4. Roman numeral X.
- C9 IX: Chord diagram shows top voice 1, 2, 3, 4. Roman numeral IX.

- **Phrygian Dominant**
- **Melodic Minor**
- **Lydian Dominant**

ARCHETYPAL WALKING BASS

play video (bass in moving in fourths or fifths)

Archetypal Walking Bass up a Fourth (or down a fifth)

scalar ascent

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

up a fourth, I to IV up a fourth, IV to VIIIm7b5 up a fourth, VIIIm7b5 to III up a fourth, III to VIm

down a fifth, VIm to IIm down a fifth, IIm to V down a fifth, V to I

chord tones where the fourth chord tone is a neighbor of the target, or a fifth of the target

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

up a fourth, I to IV up a fourth, IV to VIIIm7b5 up a fourth, VIIIm7b5 to III up a fourth, III to VIm

down a fifth, VIm to IIm down a fifth, IIm to V down a fifth, IIm to V

chord tones before the target, except the second tone is a neighbor of the third tone

it is preferred that the fourth tone is an interval of a minor third (3 frets) or less from the target tone root that begins the next chord
the fourth tone could also be the fifth of the target

♩ = 120

up a fourth, I to IV up a fourth, IV to VIIIm7b5 up a fourth, VIIIm7b5 to III up a fourth, III to VIm

down a fifth, VIm to IIm down a fifth, IIm to V down a fifth, IIm to V

scalar ascent with passing chromatic or two lower chromatics to the target

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

up a fourth, I to IV up a fourth, IV to VIIIm7b5 up a fourth, VIIIm7b5 to III up a fourth, III to VIIm

down a fifth, VIIm to IIm down a fifth, IIm to V down a fifth, IIm to V

Archetypal Walking Bass up a Fifth (or down a fourth)

scalar ascent

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

up a fifth, VIIm to III7 up a fifth, IIm to VIIm

up a fifth, I major to V up a fifth, IV to I

scalar descent with lower neighbor setup

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

down a fourth, VIIm to III7 down a fourth, IIm to VIIm

down a fourth, I to V down a fourth, IV to I

scalar descent with passing chromatic

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

21 Am E7 Dm Am

down a fourth VIIm to III7 down a fourth IIIm to VIIm

26 C G F C G/B Am

down a fourth I to V down a fourth IV to I

two chord tones, then two lower chromatics preceding the target

the last note in each bracket is the root of the next chord and is considered the "target"

♩ = 120

31 Am E7 Dm Am

down a fourth, VIIm to III7 down a fourth, IIIm to VIIm

36 C G F C G/B Am

down a fourth, I to V down a fourth IV to I

root, two chord tones, then a neighbor to next target

the neighbor can be in a pentatonic scale, preferably an interval of a minor third (3 frets) or less

♩ = 120

41 Am E7 Dm Am

down a fourth VIIm to III7 down a fourth IIIm to VIIm

46 C G F C G/B Am

down a fourth I to V down a fourth IV to I

Archetypal Walking Bass on the 2-5-1-4-7-3-6-6 Chord Progression

Autumn Leaves or Still Got the Blues in G minor

This page contains the bass line for measures 34 through 62 of a jazz piece. The key signature is B-flat major (two flats). The score is written for a single bass line on a grand staff (treble and bass clefs). Chord symbols are placed above the staff, and fingering numbers (1-5) are written below the staff. Measure numbers 34, 38, 42, 46, 50, 54, 58, and 62 are indicated at the start of their respective systems.

Measures 34-37: Chords: Cm7 [1-7-5-3], F7, Bbmaj7, Ebmaj7. Fingering: 6, 5, 8, 5, 5, 6, 10, 8, 8, 10, 7, 8, 7, 8, 8, 5, 6, 7, 7, 8, 5.

Measures 38-41: Chords: Am7(b5), D7, Gm7, Gm11. Fingering: 8, 10, 6, 6, 6, 10, 7, 10, 7, 9, 8, 10, 10, 7, 7, 7, 8, 8, 5, 3, 6, 5, 6.

Measures 42-45: Chords: Cm7 [1-7-5-1], F7, Bbmaj7, Ebmaj7. Fingering: 3, 5, 3, 5, 5, 8, 8, 8, 10, 8, 6, 7, 8, 8, 7, 8, 7, 8, 8.

Measures 46-49: Chords: Am7(b5), D7, Gm7, Gm7. Fingering: 8, 5, 6, 7, 7, 7, 4, 5, 5, 5, 4, 5, 3, 3, 6, 3, 3, 3, 3, 3, 5, 3, 5, 3, 3, 3, 5, 3, 3.

Measures 50-53: Chords: Cm7 [1-2-3-5 (non-chord, second note)], F7, Bbmaj7, Ebmaj7. Fingering: 4, 5, 5, 5, 4, 8, 5, 5, 5, 4, 5, 6, 8, 8, 8, 3.

Measures 54-57: Chords: Am7(b5), D7, Gm7, A°, A°7. Fingering: 5, 3, 3, 4, 8, 7, 8, 7, 5, 3, 4, 8, 6, 3, 4, 3, 6, 3, 5, 6, 6.

Measures 58-61: Chords: Cm7 [1-2-3-1 (non-chord, second note)], F7, Bbmaj7, Ebmaj7. Fingering: 8, 5, 6, 8, 8, 8, 10, 8, 8, 10, 7, 8, 6, 8, 8, 5, 8, 6, 8, 8, 10, 10, 10, 6.

Measures 62-65: Chords: Am7(b5), D7, Gm7, Am7(b5), A°7. Fingering: 10, 8, 10, 10, 7, 7, 7, 10, 8, 5, 6, 8, 10, 5, 5, 5, 10, 8, 5, 3, 4, 5, 6, 3.

A SCALAR BASSLINE FROM TWO MAIN CHORDS

Harmonized Octatonic Scales

The following sections of harmonized bass scales show the harmonic application of octatonic scales. The octatonic scales can also be used melodically, as shown in [“Bebop and Other Octatonic Scales”](#).

Create a Scalar Bassline with Inversions of Two Seventh Chords

Two scale-tone seventh chords on consecutive scale tones of a parent scale (Ima7 and IIm7, for example) are each made of four scale tones. Three of the tones in each seventh chord are unique and a fourth tone of each is common to both chords. With Ima7 and IIm7, Ima7 has parent scale tones 1-3-5-7 and IIm7 has parent scale tones 2-4-6-1. They share parent scale tone “1”. Using inversions of them, each of the seven steps of the parent major scale can be voiced a bass note with an inversion of one chord or another and scale tone except the bass note for scale tone “1” could be either chord.

Using Octatonic Scales To Keep Chord Tones on the Beat

The tonic chord is the chord named after the key. Fma7, F6 or Fma9 are tonic chords for F major. Gm7 or Gm9 are tonic chords for G Dorian. They are each a chord built on step one of the scale and have the same letter name as the scale.

Ascending from the first chord in the progressions below, every other chord has a chord tone of the tonic chord on the beat. The first, third, fifth, seventh and ninth chords have bass notes that are in the tonic chord. The bass notes of the tonic chord ascend in the order root, third fifth, seventh (or sixth), root.

Chromatic tones are added to make the tonic chord tones occur as bass notes of every other chord. Major has an added sharp five. Dorian has an added natural seven or an added sharp five. See the chapter [Bebop and Other Octatonic Scales](#).

Also, see [“Building Cadences with Chromaticized Bass”](#).

Play Each Row in the Following Exercises Forward and Reverse

Playing each row reading left to right ascends the bassline through the scale. Be sure to also practice each row reading right to left, so you practice descending the bassline through the scale.

IONIAN (MAJOR) HARMONIZED BASS SCALE

play each row in the following exercises forward and reverse

USING CADENCES

What Is A Cadence?

A cadence is a short musical succession of events that predicts the beginning of the next phrase or section. A *harmonic cadence* is a short chord progression that predicts a target chord that is a temporary or permanent tonic chord. It is usually a familiar chord progression that has established the key in a similar way in music we have heard in the past.

A *rhythmic cadence* brings attention to the beginning of a section or phrase. It usually has dynamic elements, such as an accent on the target chord and often uses staccato and syncopation to give the cadence “punch”. The target is usually on beat one or pushes beat one (being on the last beat division before beat one, such as on the “and after four” in 4/4 time). Rhythmic cadences are largely synonymous with pickups. See [Rhythmic Words and Comping](#) / [Hearing Pickups and Pushes](#).

Harmonic phrases use a short chord progression, most commonly three chords (two setup chords and a target chord), such as II V I (called II, V of V and I in classical theory).

See also [Globalizing/Changing Chord Progression and Cadences](#), [Melodically Superimposed Cadences](#), [Improv Level 4: Superimposed Cadence Solo Examples](#).

Building Rhythmic Cadences

Think the rhythmic cadence first to build the harmonic cadence. Modern improvisation is usually more dependent on rhythm than pitch. Think a great rhythm, then use an adequate (or better) series of notes or chords.

Memorize one of the cadence rhythms below and one of the harmonic cadences, by playing three chords in a row from one of the Linear Bass Cadence sections in this chapter ([major seventh](#), [dominant seventh](#), [Dorian](#) or [Aeolian minor seventh](#)) *ending with a chord shown in a box*.

Of all the two-bar cadences shown on Common Three-Note Pickups For Rhythmic Cadences In 4/4 Time below each one enclosed in a box is archetypal (a main idea). The examples following it, up to the next box (not inclusive) are variations of it. The variations involve rests versus sustains.

Building Harmonic Cadences

building three-chord cadences

The chords in boxes are target chords. Commonly, you would target a chord that begins on beat one by playing chords at the end of the bar before it. Beat one can be “pushed” (see [Rhythmic Words And Comping / Hearing Pickups And Pushes](#)) where it’s played “early” on the last part of the fourth beat, such as the “and after 4”. This is the “and” spoken after four when counting half beats with the syllables “one, and, two, and, three, and, four, and”.

Practice building a cadence to each of the four target chords in each ascending or descending family (such as Major Seventh Linear Harmonized Bass/ascend and Major Seventh Linear Harmonized Bass/descend). Use the same rhythmic cadence for each of the four, so you memorize it.

In the example below, the cadences for A dominant seventh on one string set (5432) are practiced in sequence.

[three chord cadence on seventh type-link to video](#)

	4	5	6	7	8	9	9	10	12	11	12	13
T												
A	4	4	5	7	8	9	9	10	12	11	12	13
B	3	5	5	8	9	10	10	11	13	10	11	12

In the example below, the cadence for F69 is from major seventh type on string set 5432, Dm7 from the Aeolian minor seventh type on string set 5432 and C9 from the Mixolydian type on string set 6432.

[three-chord cadences - link to video](#)

	6	7	8	10	8	6	6	8	6	7	8
T											
A	5	6	7	10	8	6	6	8	6	7	8
B	6	7	8	10	8	6	6	8	6	7	8

encircling cadences

Here's an interesting way to cadence, borrowed from a melodic device. Encircle the target chord (boxed) by ascending with one or two chords before the target, the chord in the sequence *after* the target, then finally play the target chord. Or, encircle the target chord descending with the one chord in the sequence *after* the target chord followed by the one or two chords before it in the sequence, ending on the target chord. These are not familiar to listeners, so they need to be played clearly with long durations and sparse arrangements. The examples below are based on Dorian Minor Seventh Linear Harmonized Bass.

[encircling cadences - link to video](#)

The image shows a musical score for a 4/4 time signature. The top staff is a treble clef, and the bottom staff is a bass clef. The key signature has one flat (B-flat). The score is divided into two measures. The first measure contains four chords: Fm7, F#m7, Fm7, and Gm7. The second measure contains three chords: F#m7, Gm7, and Fm7. The Fm7 chord in the second measure is boxed. Below the staff, there are three rows of numbers: T, A, and B. The numbers are: T: 4, 5, 6, 6; A: 3, 7, 6, 5; B: 4, 5, 8, 6. The second measure has: T: 5, 2, 3, 4; A: 7, 2, 3, 3; B: 5, 2, 3, 4.

CHROMATICIZED BASS CADENCE SUMMARY

Major Seventh Chromaticized, Harmonized Bass

ascend - all string sets (cadence to target the I chords), in the reverse order of descending

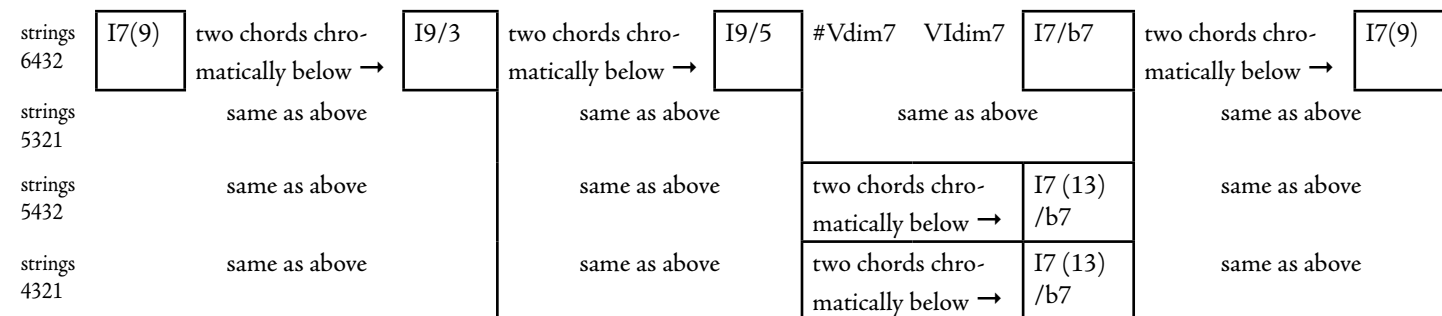

descend - all string sets (cadence to target the I chords), in the reverse order of ascending

Dominant Seventh Chromaticized, Harmonized Bass - chromatic

ascend (cadence to target the I chords). Note the special use of the 13th chord on the third and fourth rows.

descend - all string sets (cadence to target the I chords)

Dominant Seventh Chromaticized, Harmonized Bass - with II_m7

ascend - all string sets (cadence to target the I chords)

descend - all string sets (cadence to target the I chords)

Phrygian Dominant Seventh - minor key V type

Ascend with Dominant Seventh Linear Harmonized Bass - chromatic. Descend with bVI Melodiic Minor Chord, Descending Roots To Target I7.

Dorian Minor Seventh Chromaticized, Harmonized Bass

ascend- all string sets (cadence to target the Im chords)

descend- all string sets (cadence to target the Im chords)

Aeolian Minor Seventh Chromaticized, Harmonized Bass

ascend- all string sets (cadence to target the Im chords), in the reverse order of descending

descend- all string sets (cadence to target the Im chords), in the reverse order of ascending

II Minor Seventh Flat Five Chromaticized, Harmonized Bass

The "target" is IIIm7b5. Use in IIIm7b5 V7 Im progression.

ascend- all string sets (cadence to target the Im chords), in the reverse order of descending

descend- all string sets (cadence to target the Im chords), in the reverse order of ascending

MELODIC MINOR CHROMATICIZED BASS

These use chords built on steps VII, VI, V and IV of bVI melodic minor in relation to the target chord. The primary setup chord is the IV chord of melodic minor, which is the $bII7$ of the target chord. They are most useful in descending order, as shown here. See [Modes/Modes Of Four Hepatonic Scales/Melodic Minor Modes](#).

Building Fretboard Exercises

- **The Purpose**
- **Fingering Resources**
- **Minimize Altering Fingerings at First**
- **“Cycle Practice” versus Freeform Practice**
- **Design Resources**

THE PURPOSE

The purpose of practicing scale, arpeggio and melodic design exercises is to develop the facility to use parts of the exercises in creating melody. Usually, many design elements are necessary for the final melody. In the unaltered exercises, you should have to use a creative imagination to evolve to the full, expressive melody.

Listen to a finished melody that you admire. Imagine a work flow that follows a path back to the scale and arpeggio design, rhythmic words, phrasing and emotive curve that resulted in the melody.

Prefer Chord Tones on the Beat

One of the most important means of establishing chord tones in melody is to place the chord tones on the beat. Or, in the case of “pushes”, place the chord tone immediately before a beat and sustain onto the beat or leave a silence on the beat. See the chapter “[Rhythmic Words and Comping](#)”/Hearing Pickups and Pushes.

sixteenth notes in groups of four or eight, with a chord tone on the beat

When playing a seven-tone scale like the major scale linearly and or down, four notes per beat (sixteenth notes), the succession of notes on the beginning of each beat is fifths. The series of fifths would not always be chord tones of the current seventh chord. A good compromise in exercises in linear scales in sixteenth notes is to start every beat or two with a tone of the current seventh chord. See “placing the chord tones on the beat”, below.

eighth note triplets in groups of six, with a chord tone on the beat

When playing a seven-tone scale like the major scale linearly and or down, three notes per beat (eighth note triplets), the succession of notes on the beginning of each beat is fourths. The series of fourth would not always be chord tones of the current seventh chord. A good compromise in exercises in linear scales in eighth note triplets is to start every two beats with a tone of the current seventh chord. This would create a fragment pattern (1-2-3-4-5-6) of six notes. See “placing the chord tones on the beat”, below.

Seven Pentatonic Scale Types by Fingering Number

The black-backed tones below are triad tones. 1-b3-5 is a major triad and 1-3-5 is a major triad. The remaining gray tones are pentatonic scale tones not in the triad. The 7/11 (dominant 7/11) pentatonic scale has an optional "b3". The flat three precedes the natural "3", whether ascending or descending. "b3" is often slurred (by a bend, hammer-on or slide) to "3".

Triad Arpeggios

major arpeggios

minor arpeggios

diminished (triad) arpeggios

augmented arpeggios

Quadrad Arpeggios (Includes Sevenths)

These fingerings show the lowest complete octave of each arpeggio in black. The remaining notes shown in grey may be above, below or both above and below. Practicing the fingerings in rows or columns allows you to more quickly memorize the fingerings. As you move to the right in each row on this page, a sequence of flatted tones will occur: flat the seventh, flat the third, flat the fifth, double flat the seventh ("bb7" is the same tone as "6"). Any note of diminished seventh can be the root. This same sequence is shown with chord fingerings in the chapter "[Chord Archetypes](#)" / Fingering Families of Seven Seventh Chord Types.'

G form								

Ninth Arpeggios

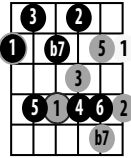

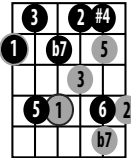

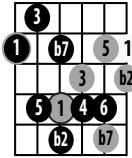

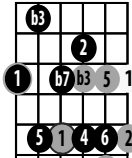

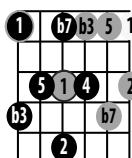

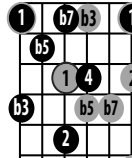

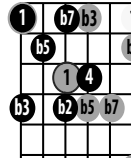

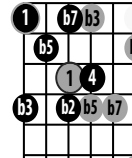

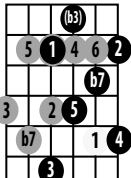

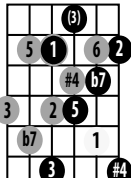

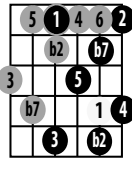

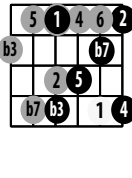

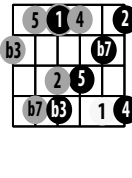

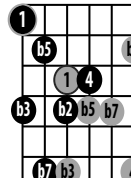

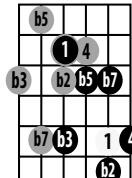

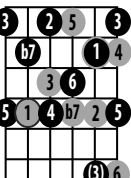

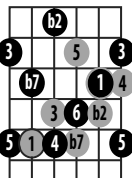

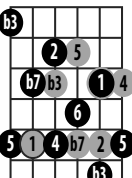

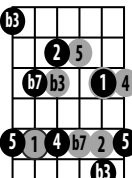

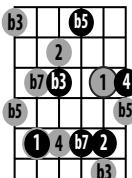

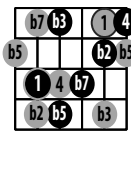

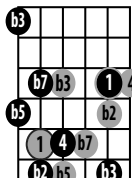

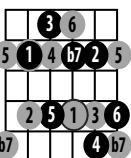

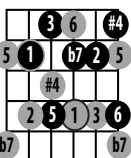

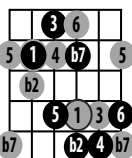

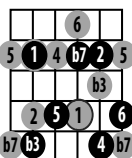

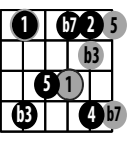

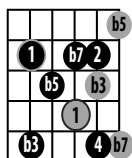

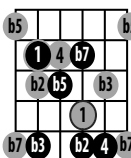

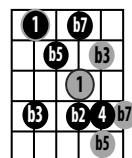

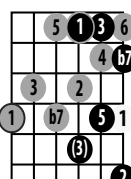

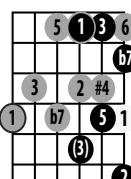

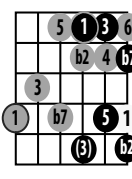

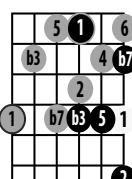

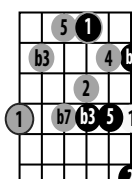

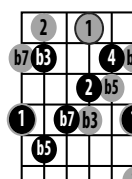

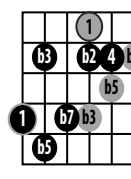

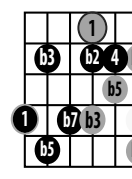

These fingerings show the lower or middle octave with black-backed numbers and the remaining notes with grey-backed numbers. Ascend each octave in the order 1-3-5-7-2, honoring any indicated flats. Due to range limitations, the beginning of the 1-3-5-7-2 series may not be fully available in the bass (on the larger strings). Likewise, the end of the 1-3-5-7-2 series may not all be available in the treble (on the smaller strings).

Some m9(ma7) arpeggios may seem impractical, but they are necessary subsets of melodic minor scale fingerings (see [Prime Scales, Chords and Arpeggios/Melodic Minor Scale Fingerings](#)). Although it is an eleventh chord, 11b5b9 is included since it is useful as a II type in minor II-V-I cadences. See [Prime Scales, Chords and Arpeggios/Arpeggios and Their Scales](#).

MINIMIZE ALTERING FINGERINGS AT FIRST

Keep it simple at first and begin with unaltered fingerings. If you need to modify a scale tone, prefer doing it by reaching (one fret with the index fingering toward the head of the guitar or one fret with the little finger toward the body of the guitar), rather than changing position.

CYCLE PRACTICE VERSUS FREEFORM PRACTICE

Start with “cycle practice” of scales, but move toward less repetitive, organic use of scales, like Eric Johnson (see [Cliffs of Dover live](#)) with pentatonic scales and like Matteo Mancuso (see [Samba Party](#)) or Pat Metheny (see [Have You Heard live](#)) with seven tone scales. Cycle-practice seven tone scale fingerings to an interval of a ninth or two octaves and a third. Cycle-practice pentatonic scale fingerings an octave plus three notes.

Major Scale Mode Cycle a Ninth Interval

FINGERINGS

In-Position And Three-Note-Per-String Fingerings

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. Other fingerings called “three-note-per-string” major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position fingerings

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

When numbered by fingers, “1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger.

three-note-per-string fingerings

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on.

HARMONY

Major Scale-Tone Thirds and Sixths

scale-tone:	I	II	III	IV	V	VI	VII
thirds	major	minor	minor	major	major	minor	minor
sixths	minor	major	major	minor	minor	major	major

major (ionian) with its tonic major triads

Thirds on strings
three and two

sixths on strings
three and one

sixths on strings
four and two

The circled note (○) represents the major (Ionian) tone center. The three-note chords are the tonic chord, which is the major chord named after the key. If the key (○) is “A”, the three-note chords are A major.

An interval of a third is not part of this major chord: . In that case, this fourth can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

Lydian (four of parent major) with its tonic major triads

thirds on strings
three and two

sixths on strings
three and one

sixths on strings
four and two

The circled note (○) represents the Lydian tone center. The three-note chords are the tonic chord, which is the major chord named after the key. If the key (○) is "A", the three-note chords are A major.

An interval of a third is not part of this major chord: . In that case, this fourth  can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

An interval of a third or sixth made with the circled tone center are part of various Lydian tonic chords (major sixth, major seventh and major ninth). The gray-backed notes are the remaining notes *not* in any usable type of tonic Lydian major chord (except suspended chords).

Mixolydian (five of parent major) with its tonic major triads

thirds on strings
three and two

sixths on strings
three and one

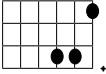

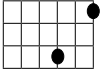

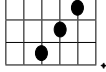

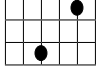

sixths on strings
four and two

The circled note (O) represents the Mixolydian tone center. The three-note chords are the tonic chord, which is the major chord named after the key. If the key (O) is "A", the three-note chords are A major.

An interval of a third is not part of this major chord: . In that case, this fourth  can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

An interval of a third or sixth made with the circled tone center are part of various Mixolydian tonic chords (major, sixth, seventh and ninth). The gray-backed notes are the remaining notes *not* in any usable type of tonic Mixolydian major chord (except suspended chords).

Dorian (two of parent major) with its tonic minor triads

thirds on strings three and two	sixths on strings three and one	sixths on strings four and two

The circled note (O) represents the Dorian tone center. The three-note chords are the tonic chord, which is the minor chord named after the key. If the key (O) is "A", the three-note chords are A minor.

An interval of a third is not part of this major chord: . In that case, this fourth can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

An interval of a third or sixth made with the circled tone center are part of various Dorian tonic chords (minor, minor sixth, minor seventh and minor ninth). The gray-backed notes are the remaining notes *not* in any usable type of tonic Dorian major chord (except suspended and minor eleventh chords).

Phrygian (three of parent major) with its tonic minor triadsthirds on strings
three and twosixths on strings
three and onesixths on strings
four and two

The circled note (O) represents the Phrygian tone center. The three-note chords are the tonic chord, which is the minor chord named after the key. If the key (O) is "A", the three-note chords are Am.

An interval of a third is not part of this major chord: . In that case, this fourth can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth can be used in place of a sixth for tonic major chord tones.

Aeolian (six of parent major) with its tonic minor triadsthirds on strings
three and twosixths on strings
three and onesixths on strings
four and two

The circled note (O) represents the Aeolian tone center. The three-note chords are the tonic chord, which is the minor chord named after the key. If the key (O) is “A”, the three-note chords are Am.

An interval of a third is not part of this major chord: . In that case, this fourth  can be used in place of a third for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

An interval of a sixth is not part of this major chord: . In that case, this fifth  can be used in place of a sixth for tonic major chord tones.

Major Scale-Tone Quartal and Quintal Harmony

major scale-tone quartal and quintal triads

The I major pentatonic and the VI minor pentatonic share the same notes, 1-2-3-5-6 of a major scale. Add a tone a fourth above and below each tone of the I major/VI minor pentatonic and produce quartal triads. Or, or add a tone a fifth above and below each tone of the I major/VI minor pentatonic and produce quintal triads. For C major, this creates the chords below. Each triad has the *same* notes whether it is a I major/VI minor pentatonic tone with a fourth above and a fourth below or if it is a I major/VI minor pentatonic tone with a fifth above and a fifth below.

nr = no root, n3 = no third, n5 = no fifth

scale tone number	1	2	3	5	6
letter in C major	C	D	E	G	A
quartal/quintal triad numbered tones of parent C major	5-1-4	6-2-5	7-3-6	2-5-1	3-6-2
quartal/quintal triad lettered tones of parent C major	G-C-F	A-D-G	B-E-A	D-G-C	E-A-D
I major chord names	I sus.4	I6/9 nr,n3	I ma7/6 nrn5	I sus2	I6/9 nrn6=5
II Dorian chord names	II m7/11 nrn5	II sus.4	II6/9 nrn3	II m7/11 n3n5	II sus2
III Phrygian chord names	no III chord	III m7/11 nrn5	III sus4	no III chord	III7sus4n3n5
IV Lydian chord names	IV sus2	IV6/9 nrn5	IV ma7#11 nrn5	IV6/9 nrn3	IV ma7/6 nrn5
V Mixolydian chord names	V7sus4 nrn5	V sus2	V6/9 nrn5	V sus4	V6/9 nrn3
VI Aeolian chord names	no VI chord	VI m7/11 n3n5	VI sus2	VI m7/11 nrn5	VI sus4
VII Locrian chord names	VII m7/11 b5 nrn3	VII m7/11 b5 nrn5	VII m7/11 n3n5	no VII chord	VII m7/11 nrn5

For an exotic effect, chords can be approached from a half step above or flatted. The effect is bluesy or eastern/exotic, depending on the mode. In major, for example, chords a half steps above 3 and 6 are bluesy; and half steps above 1, 2 and 5 are eastern/exotic.

fourths in the major scale

Major scale fourths can be memorized with the fourths diagrams below. The “stacks” or sequences of fourths are connected with lines. Note that each pair of notes in the series of fourths “7-3-6-2-5-1-4” are on the same fret, except from the third to second string, the note on the second string is one fret closer to the guitar body. Also note that the interval from “4” to “7” is an augmented fourth, making “7” one fret higher on the next smaller string. When “4” is on the third string, both of these exceptions come into play and “7” is *two* frets toward the body of the guitar from “4”.

fifths in the major scale

Major scale fifths can be memorized with the fifths diagrams below. The “stacks” or sequences of fifths are connected with “back slash” diagonal lines. Note that each pair of notes in the series of fifths “4-1-5-2-6-3-7” form a diagonal line that spans two frets, except from the third to second string, where the diagonal line spans *three* frets. Also note that the exceptional interval from “7” to “4” is an diminished fifth, where the diagonal line spans *one* fret. When “7” is on the third string, both of these exceptions come into play and “4” is *two* frets toward the body of the guitar from “7”

FINGERINGS

In-Position And Three-Note-Per-String Fingerings

Harmonic minor scale fingerings are numbered in reference to major sharp five scale fingerings in this course. Harmonic minor is as mode on the sixth step of major sharp five scale.

major sharp five and harmonic minor modes

see [All Scale-Tone Chords/Harmonic Minor Scale-Tone Chords](#)

Harmonic minor is a mode on step six of major sharp five scale. If you know the modes of the major scale, thinking in major sharp five is a matter of altering one note in each mode. Note the descending number series of altered tones: major #5, Dorian #4, Phrygian natural 3 (raised from b3), Lydian #2, Mixolydian #1, Aeolian natural 7 (raised from b7 to produce harmonic minor) and Locrian natural 6.

mode names →	major #5	Dorian #4	Phrygian dominant (nat. 3)	Lydian #2	Mixolydian #1	Aeolian nat.7	Locrian nat.6
major #5 scale tones →	I	II	III	IV	#V	VI	VII
I major #5 chords	Ima9#5	IIm13#11 or IIDim7	III7b9(/11)b13	IVma7/6(#11) or bVIDim7	#Vdim7	VIIm9(ma7)	VIIIm7b5(/11) or VIIIdim7
C ma#5 chords	Cma9/6#5	Dm13#11 or Ddim7	E7b9(/11)b13	Fma7/6(#11) or Fdim7	G#dim7	Am9(ma7)	Bm7b5(/11) or VIIIdim7
harmonic minor tones →	bIII	IV	V	bVI	VII	I	II
VI har. min. chords	bIIIma9#5	IVm13#11 or IVdim7	V7b9(/11)b13	bVIIma7/6(#11) or bVIDim7	VIIIdim7	Im9(ma7)	IIm7b5(/11) or IIDim7
A harmonic minor chords	Cma9/6#5	Dm13#11 or Ddim7	E7b9(/11)b13	Fma7/6(#11) or Fdim7	G#dim7	Am9(ma7)	Bm7b5(/11) or VIIIdim7

in-position fingerings

The fingerings are numbered according to the scale number of lowest major sharp five scale tone of the parent major scale fingered with the index finger on the sixth string. The parent major scale for C major sharp five is C major. The parent major scale for A harmonic minor is also C major, since C major sharp five and A harmonic minor have the same notes. The harmonic minor tone center is scale tone six of major sharp five scale, so when the lowest pitch on the sixth string is the harmonic minor tone center ("A" for A harmonic minor), it is fingering 6, since that note is the sixth step of C major sharp five.

three-note-per-string fingerings

Other fingerings called “three-note-per-string” fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

The in-position fingerings shown below lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on. in-position fingerings, numbered by fingers.

full-fretboard major sharp five scale with fingerings by formula number

full-fretboard harmonic minor scale with fingerings by finger number

Diagram illustrating the full-fretboard harmonic minor scale with fingerings by finger number. The scale is shown across 12 frets, with notes and fingerings for each string (1-6) and fret (1-12).

String 1 (High E): Notes: 1 (1), 4, b3, 5, 1 (1). Fingerings: 1, 4, b3, 5, 1.

String 2 (A): Notes: 7, b6. Fingerings: 7, b6.

String 3 (D): Notes: 2, 5, 1 (1), 4, 2. Fingerings: 2, 5, 1, 4, 2.

String 4 (G): Notes: b3, b6. Fingerings: b3, b6.

String 5 (B): Notes: 2, 5, 7. Fingerings: 2, 5, 7.

String 6 (Low E): Notes: 4, b3, b6, 1 (1), 4. Fingerings: 4, b3, b6, 1, 4.

Fingerings by Finger Number:

full-fretboard harmonic minor scale with fingerings by formula number

Diagram illustrating various guitar chord voicings and fingerings for the F#m7b9 chord. The diagrams are organized into columns, each showing a specific fingering pattern across the fretboard.

Fingering 1: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 1/2: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 3: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 3/4: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 5: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 5/6: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 7: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 7/1: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 7: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 7/1: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 2: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 2/3: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 4: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 4/5: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 6: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

Fingering 6/7: Shows a voicing with fingers 1, 4, b3, 5, 1 across the strings. The diagram includes a grid showing the fretboard layout and the corresponding fingerings for each string.

HARMONIC MINOR SCALE-TONE CHORDS

Interval Cycles of Harmonic Minor and its Parent: Major Sharp Five

Harmonic Minor Scale Tone Chord Fingerings

A harmonic minor scale-tone triads, stepwise root order, sixth-string roots

The second row of numbers below (such as 6-1-3 and 7-2-4) are the parent major sharp five scale tone numbers used to construct the triad. Each of these has the same notes as its counterpart below built in thirds, but the chord tones are in a different order.

Im 6-1-3 Am V	II dim. 7-2-4 Bdim VI	bIII aug. 1-3-#5 Caug. VIII	IVm 2-4-6 Dm X	V 3-#5-7 E XII	bVI 4-6-1 F I	VII dim. #5-7-2 G#dim. III
1 5 1 b3 5 1	1 1 b3 b5	1 1 3 #5	1 5 1 b3 5 1	1 5 1 3 5 1	1 5 1 3 5 1	1 1 b3 b5

A harmonic minor scale-tone triads, stepwise root order, fifth-string roots

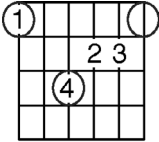

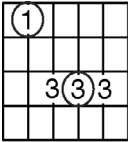

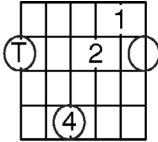

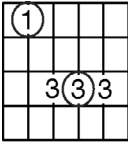

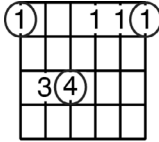

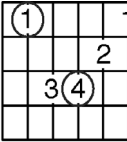

The second row of numbers below (such as 6-1-3 and 7-2-4) are the parent major sharp five scale tone numbers used to construct the triad. Each of these has the same notes as its counterpart below built in thirds, but the chord tones are in a different order.

Im 6-1-3 Am XII	II dim. 7-2-4 Bdim XIV or II	bIII aug. 1-3-#5 Caug. III	IVm 2-4-6 Dm V	V 3-#5-7 E VII	bVI 4-6-1 F VIII	VII dim. #5-7-2 G#dim. XI

FINGERINGS

In-Position And Three-Note-Per-String Fingerings

Melodic minor is used in jazz as a major scale with a flatted third. In classical music, it ascends as a major scale with a flatted third, but descends as Aeolian, like a major scale with flat three, flat six and flat seven. Melodic minor scale fingerings are numbered in this course according to the number of the lowest note of the parent major scale fingered with the index finger on the sixth string. The parent major scale for C melodic minor is C major. Other fingerings called “three-note-per-string” major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position fingerings

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

three-note-per-string fingerings

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/b3 combines in-position fingerings 2 and b3; and so on.

HARMONY

Melodic Minor Scale-Tone Thirds and Sixths

scale tone:	I	II	bIII	IV	V	VI	VII
thirds	minor	minor	major	major	major	minor	minor
sixths	major	major	minor	minor	minor	major	major

melodic minor (major flat three) with its tonic minor triads

The circled note (O) represents the melodic minor tone center. The three-note chords are the tonic chord, which is the minor chord named after the key. If the key (O) is "A", the three-note chords are Am.

A third is not part of this minor chord: . In that case, this fourth  can be used in place of a third for tonic minor chord tones.

A sixth is not part of this minor chord: . In that case, this fifth  can be used in place of a sixth for tonic minor chord tones.

A sixth is not part of this minor chord: . In that case, this fifth  can be used in place of a sixth for tonic minor chord tones.

Notice the segregation of four three major thirds (not in a rectangle) and four minor thirds (in the rectangles). Also notice the segregation of four major sixths (in the rectangles) and three minor sixths (not in the rectangles).

Quartal and Quintal Harmony in Melodic Minor

melodic minor quartal and quintal triads

The I minor 6/9 pentatonic and the VI minor 7/11b5 pentatonic share the same notes, 1-2-b3-5-6 of a parent melodic minor scale. Add a tone a fourth above and below each tone of the I minor 6/9 or VI m7/11b5 pentatonic and produce quartal triads. Or, or add a tone a fifth above and below each tone of the I minor 6/9 or VI m7/11b5 pentatonic and and produce quintal triads. For C melodic minor, this creates the chords below. Each triad has the *same* notes whether it is a I minor 6/9 or VI m7/11b5 pentatonic tone with a fourth above and a fourth below or if it is a I minor 6/9 or VI m7/11b5 pentatonic tone with a fifth above and a fifth below.

nr = no root, n3 = no third, n5 = no fifth, n7 = no 7

fourths in melodic minor

Fingerings for fourths in melodic minor are a modification of [fourths in the major scale](#)). Note that it is *diminished fourth* from “7” up a scale tone fourth to “b3”, making a major third. Also note that “b3” to “6” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “b3”.

fifths in melodic minor (ascending version)

Fingerings for fifths in melodic minor are a modification of [fifths in the major scale](#). Melodic minor is a major scale with a flatted third. Flattening the third modifies two of the fifth intervals: “6” to “b3” is a diminished fifth and “b3” to “7” is an augmented fifth. As with the major scale, “7” to “4” is a diminished fifth.

FINGERINGS

In-Position And Three-Note-Per-String Fingerings

Major flat six is the most rare of the four usable heptatonic scales. Major flat six scale fingerings are numbered in this course according to the number of lowest note of the parent major scale fingered with the index finger on the sixth string. The parent major scale for C harmonic major is C major.

Other fingerings called “three-note-per-string” major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position fingerings

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

three-note-per-string fingerings

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on.

VOICE LEADING AND CADENCES

Voices as Part of an Ensemble

“voices”

Individual musical parts in an arrangement are called *voices*, analogous to singers”.

conceiving voices with four-note chords

Chord progression can be conceived as the combination of multiple voices, as in a choir or other ensemble. Consider playing a chord progression with strictly four-note chords. Each chord would literally have only four notes. Two of the notes could be the same note in different octaves.

abbreviating chords with more than four different notes

Some of the four-note chords may be abbreviations of larger chords. Ninth chords have five different notes, but certain notes can be omitted. A simple rule to abbreviate chords with more than four notes down to four-note chords is to include the third, the seventh (if involved) and any note mentioned in the chord name. See [Chord Naming Conventions/Preferred Chord Tones](#).

extracting voices from the four-note chords

Conceive a series of notes made up with the highest note of each chord. This is the *soprano* voice. Consider another series of notes make up with the next-to-highest note of each chord. This is the *alto* voice. The series of notes made from the next-to-lowest tones in each chord is the *baritone* voice, and the series made from the lowest tones of each chord is the *bass* voice.

the roles of the voices as melody and harmony

The soprano, alto, tenor and bass “voices” can each be thought of as the basis of a melody or harmony. Usually one of the voices is the focal point and is considered the melody and the remaining voices are harmonies. Sometimes, two of the voices move in parallel thirds (each lower note of a voice accompanied by a note in an upper voice two scale tones higher, such as “A” below and “C” above) In this case of parallel thirds, both voices could be considered melody or one of them could be more strongly emphasized to assign it as the melody.

vocal duets, trios, quartets, quintets, etc.

Vocal ensembles may have from two to ten or more singers. The respective names for groups of two through ten singers are duet, trio, quartet, quintet, sextet, septet, octet, nonet and dectet. The soprano, alto, tenor bass voicings are usually used for the other ensembles, choosing two or three of the voices

for a duet or trio or doubling voices with ensembles of five or more (sometimes doubling in a different octave).

melody commonly in the treble or bass

The important voice (melody) is most commonly in the soprano (lead vocal, lead guitar etc.), but often in the bass (Jaco Pastorius, Ron Carter, Jack Cassidy, Geddy Lee, Paul McCartney). In traditional jazz ensembles the trumpet player is typically the melody player and the band leader (Louis Armstrong, Miles Davis, Dizzy Gillespie, Wynton Marsalis). Improvising trombone players often provide a strong secondary melody, especially in New Orleans. Check out this [Freddie Lonzo video](#).

voice leading

Any particular voice may move up or down or stay on the same note if available) as the ensemble moves on to the next chord. The design of this succession of notes in a particular voice is *voice leading* and it results in a melodic line.

counterpoint

The combined design of the movement of all the voices is called *counterpoint*. In counterpoint, chord tones predominate, but passing and neighboring tones are used in addition to chord tones. There are historically five species of counterpoint. The first species was described above, with the one note in each voice on each chord, making a four-note harmony. Though there may be use of non-chordal tones in counterpoint, it's best to first conceive the simplest core melody with one note per chord. Second species counterpoint involves two notes in one or more voices during one note in the remaining voices. Third species counterpoint pits four notes against one, fourth species has the notes offset in time and fifth species mixes the other species in a free-form manner.

complexity on the important voices, simplicity on other voices

The less important voices (the harmony voices) should move by smaller intervals with regular rhythm and other predictable characteristics. Since the more important voices are the main focus for the listener, the more important voices can take more liberties with larger intervals, more complex rhythm and other elements that require more attention by the listener.

range of pitch between the voices

Larger intervals should be used in the bass (in the low range of pitch) and smaller intervals in the treble (high range of pitch).

Target and Setup Chords

See the chapter [Melodically Superimposed Cadences/Target Chords](#) and [Setup Chords](#).

target chords

Target chords establish a sense of key, a tonal focal point and the feeling that ending on a target chord would sound final and complete. A target chord may be the tonic chord of the key (Am in the key of Am) or a chord establishing a temporary key using any significant chord with a duration of a bar or more.

setup chords

A setup chord is the last chord in a cadence before the target or tonic chord (or temporary tonic chord). See the chapter [Melodically Superimposed Cadences/Superimposed Cadence Voice Leading](#).

Cadences

Cadences are chord progressions, usually of two, three or four chords, are used to establish a key or temporary key. In each genre, listeners are familiar with certain cadences. “II-V-I”, for example is the basis of jazz chord progression and is common in other popular styles. In C major “II-V-I” is Dm7-G7-Cma7. In C minor, it is Dm7b5-G7-Cm7.

Categories of Cadences by Root Movement

In improvising or composing melody, immediately before a target chord, you can represent a setup chord with an arpeggio, a decorated arpeggio (with scale-tone or chromatic neighbors) or with a pentatonic scale named after the setup chord.

common intervals from setup chord root to target chord root

The common intervals from setup chord root to target chord root are stepwise, fourths, fifths and chromatic

fourths or fifths: authentic cadence (V-I), plagal cadence (IV-I)

The setup chord may have its root up or down a fourth from the target (Em to Am or Dm to Am in a chord progression based on the C major scale). When the setup chord root is a perfect fourth below the root of the target chord, the setup chord's root is on the fifth of the key of the target chord root and can be called the “secondary dominant” of the target chord (a “primary dominant” if the target chord is the tonic chord of the key). The chord progression can be dramatized by treating the setup chord as a secondary dominant by changing a minor chord to major or seventh or by changing a major chord to a seventh or altered seventh (#5, b5, #9, b9).

See [Secondary Dominant and Plagal Cadence in Open Position](#) in this chapter. Also see the chapter [Secondary Dominant](#)/Secondary Dominant Exercise and the chapter [Substitution](#)/Flat Five Substitute.

stepwise: upper or lower neighbor

Examples: VII dim to I or IIm to I; Ima to IIm or IIIIm to IIm. The setup chord may have its root a scale tone above or below the target (G major or B diminished in the C major scale setting).

chromatic

You may use a sequence of chords that harmonizes a bass line involving chromatics, including these:

desc dim	I7 Idim7 IImb7b5 I (IIm7b5=IVm6)
1#125	I #Idim7 IIm V
1b325I	I bIIIIdim7 IIm V
1#12#23	I #Idim7 IIm #IIIdim7 IIIIm or I #Idim7 IIm #IIIdim7 I/3
12#23	I IIm #IIIdim7 IIIIm
134#45	I-I/3-IV-#IVdim7-V or I-I/3-IV-#IVdim7-I/5
3b325	IIIIm bIIIIdim IIm V
4#41	IV #IVdim7 I

Types Of Cadences

authentic cadence (British: perfect cadence)

The *authentic* cadence is V-I. In a cadence to the chord C7 with Dm7-G7-C7, “C7” is the tonic chord. In the key of C, establishing “F7” as a temporary tonic, Gm7-C7-F7 could be used as a II-V-I cadence to the temporary key of F using a C7 as a secondary dominant (see below).

An authentic cadence is a V setup chord to a I target chord (like the secondary dominant below), but is always with the target as “I”. “I” could be called the “primary dominant.”

secondary dominant

A secondary dominant-type setup chord is the V of the target (G is the V of a C target). Any chord with a duration of a few beats and with a temporary tonality can be a target chord. Preceding the target chord with a V of it is a secondary dominant. See the chapter [Secondary Dominant](#).

flat five substitute (tritone substitute)

A flat five substitute for the authentic cadence is bII-I. Using flat five substitutes makes chord root progression chromatic. VI-II-V-I becomes bIII-II-bII-I. See [“Substitution”/Flat Five Substitute](#) and see [“Melodically Superimposed Cadences”/Superimposed Cadence Voice Leading, Chromatic Chord Progression](#) and [flat five substitute chord progression](#).

plagal cadence (“amen” cadence)

The plagal or “amen” cadence is IV-I. It uses cadences down in perfect fourths, instead of up in fourths. Perfect fourths are two and one half steps and are equivalent to the interval from the first to the fourth step of a major scale, or any pair in the series 4-1-5-2-6-3-7-#4-#1, etc.

minor plagal cadence

The plagal cadence is also used with IVm, making a IVm-I cadence with a touch of sadness.

multiple plagal cadences

For a double plagal cadence, figure out the plagal cadence (IV of the target), then figure out the IV of the plagal chord. Use the IV of the plagal chord, then the plagal chord, then the target. For an “E” target, this would be D-A-E.

A double plagal cadence is bVII-IV-I. Examples are Addicted to Love, All Right Now, Angel from Montgomery chorus, Back in Black, Dear Mr. Fantasy, Desire, Gimme All Your Lovin’, Good Times Bad Times, Hard Sun, Hey Jude ending chorus, If I Were a Carpenter, Magic Bus, Satisfaction, Sharp-Dressed Man, She Said She Said, Sweet Home Alabama, Sugar Magnolia, Take Me to the River, With a Little Help from My Friends chorus, Won’t Get Fooled Again.

A triple plagal cadence is bIII-bVII-IV-I. Examples are Comfortably Numb, Fly Away, Jumpin’ Jack Flash, Old Man, Maybe I’m Amazed, Summer Breeze.

A quadruple plagal is bVI-bIII-bVII-IV-I (C-G-D-A-E), such as Crazy (Seal), Day In The Life (or the “aah” middle section), Here Comes the Sun, Hey Joe, Hush (Joe South, popularized by Deep Purple). See the section later in this chapter [“Parallel Major Chords with bVII, bIII or bVI/Double Plagal Cadence, Triple Plagal Cadence, Quadruple Plagal Cadence](#).

Multiple plagal cadences in the key of E (the links below go to Spotify playlists in various keys):

- [double plagal](#): D-A-E
- [triple plagal](#): G-D-A-E
- [quadrupal plagal](#): C-G-D-A-E

stepwise cadence

Although this is not recognized in traditional harmony, it is commonly used in pop music. As stated earlier, the setup chord may have its root a scale tone above or below the target (G major or B diminished in the C major scale setting).

half cadence (British: imperfect cadence)

This is conceptually a secondary cadence. I, II, IV or VI progresses to V, sounding incomplete. It ends with the target chord on V. It is usually following by another cadence that does resolve to the tonic I chord, like an authentic cadence.

deceptive cadence

Although the listener expects a song to end on the tonic chord, it doesn't have to. A song can end with a deceptive cadence, where the final chord is not the tonic chord. See [deceptive cadence](#) in [Modes](#).

Escherian cadence

An Escherian cadence is a special kind of deceptive cadence. Maurits Cornelis Escher's drawings displayed relationships in perspective that defy logic. Each element seems to make sense in its own right, but shouldn't co-exist with related elements. Look at his art at www.mcescher.com, especially "Waterfall", "Ascending and Descending" and "Belevedere".

Like Escher's art, music can suggest one thing and do another, leading you along a path of audio logic that may take an unexpected turn. A chord progression can suggest movement to a particular chord and go to another that uses a different mode or that contains the expected chord, but with a different root.

Expert magicians, like expert improvising musicians and composers are clever at distracting the audience while introducing something unexpected. A magician may distract you with one hand while sneaking something with the other. An improvising musician may use a familiar melodic phrase and by changing the right note, use the notes that will introduce an unexpected chord or key.

An Escherian cadence is a resolving chord progression that suggests a resolution to a particular mode then resolves to another. It may do this by resolving to a different mode of the same key, or to a chord that includes the implied chord, but has a different root, such as suggesting Am and resolving to Fma7, which contains Am.

Secondary Dominant and Plagal Cadence in Open Position

secondary dominant with major (V of target minor or major below)

A I B I C I D I E I F I G I F# II C# IV

secondary dominant - (V of target) with seventh chord (more dramatic)

A7 I B7 I C7 I D7 I E7 I F7 II G7 I F#7 II C#7 IV

target minor

Dm I Em I Fm I Gm III Am I Bbm I Cm III Bm II F#m II

target major

D I E I F I G I A I Bb I C I B II F# II

plagal cadence (IV of target I in the row above)

G I A I Bb I C I D I Eb III F I E I B II

CHORD PROGRESSION USING A SINGLE SCALE

SUMMARY CHORD PROGRESSION

A commonality chord consists of three or more tones that are common to versions of two or more chords. When a commonality chord can represent the key of the song or the key of a section and can be part of most of the chords, it can be called a *summary chord*.

In a summary chord song, you can feature the tones of the summary chord by building themes around it and using scales and arpeggios that feature it. Knowingly or unknowingly, pop composers and improvisers create and perform chord progressions that take advantage of summary chords. If Am is the summary chord of a section of a song, you can largely “jam in A minor” during the section as if it is all an A minor chord.

Blues, R&B, funk, and most American pop music take advantage of the summary chord concept, making it easy for the listener to follow and predict the melody, basing the melody on a scale named after the summary chord.

See the chapter “[Core Melody on Triad Chord Progression](#)”.

Conceiving Many Versions of Chords

With a thorough knowledge of chord construction and chord types, you can consider each chord in a progression and the possibility of a proposed summary chord (usually a triad) for each of the chords in a progression. Spell each of the chords in the progression and consider the addition of the notes of the proposed summary chord. For each note of the summary chord, analyze what tone it would be in the chord you are considering and determine if that tone could be part of a currently acceptable version of the chord.

See [Chord Naming Conventions/Chord Qualities Not Currently Acceptable](#) and [Chord Archtypes](#).

songs with two or more summary chords

Songs sections often have a second summary chord for part of the section. The most common second summary chord is on the V chord of the key. More complex songs have more than two summary chords.

7-3-6-2-5-1-4: ASCENDING ROOTS IN FOURTHS

The most common chord root movement is ascending perfect fourths. In any major scale the series of fourths is the number cycle “7-3-6-2-5-1-4”. With triads in C major, this is “Bdiminished-Em-Am-Dm-G-C-F”. With triads in F major, it is “E diminished-Am-Dm-Gm-C-F-Bb”.

Ascending chord roots in fourths produces the same root sequence as descending chord roots in fifths, which is the common “cycle of fifths” in reverse order. In numbers, ascending chord roots in fourths is 7-3-6-2-5-1-4. In the key of “C”, that is “B-E-A-D-G-C-F”,. The twenty-one letter series below includes “7-3-6-2-5-1-4” for every key. “7-3-6-2-5-1-4” for any one key is seven consecutive letter in the series where the next-to-last (sixth) of the seven is the name of the key (“1”).

B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb

See Learning Keys with Chord Progression/Scale-Tone Chord Progression/[Chord Progression in Stepwise and Fourths Order](#). In that section, a page is shown for every key. For the key featured on each page, the scale-tone chord progression in perfect fourths (7-3-6-2-5-1-4) is shown.

Seventh Chord Voice Leading

With predictable voice leading for four-note seventh chords with their roots ascending in fourths is to:

- ✦ descend the fifth and seventh of the current chord to become the root and third of the chord whose root is up a fourth
- ✦ retain the root and the third of the current chord to become the fifth and the seventh of the chord whose root is up a fourth

Study this in more detail in:

- ✦ Voice Leading/Perfect Fourth Quadrad Cadences/[Descend Five and Seven](#).
- ^ [Scale-Tone Seventh Progression/Major Scale-Tone Sevenths in Fourths, Descend Five and Seven, Bass on Fifth String](#)

Popular Songs That Use Part of 7-3-6-2-5-1-4

iReal and streaming services like Spotify

More than half of the popular song repertoire uses part of 7-3-6-2-5-1-4 chord root movement. Looking at song examples that use common consecutive groups of two, three or four roots will be insightful.

Most of the songs on this list are available in iReal, a loopable, transposable rhythm track program (and over a thousand other songs and studies). It currently (2021) costs \$15 or \$20 for Mac, iOS or Android. Buy the \$5 Blues add-on. Here is a link to the [“All Favored”](#) iReal file, which has most of the songs on this list. Install it in iReal.

On Spotify, each of the playlists below (I-IV, IIm-V, etc.) are within the [jgleason6](#) profile.

4-1-5-2-6-3-7: ASCENDING ROOTS IN FIFTHS

Ascending chord roots in fifths produces the same root sequence and descending chord roots in fourths. In numbers, it is 4-1-5-2-6-3-7. In the key of "C", it is "F-C-G-D-A-E-B". The twenty-one letter series below includes "4-1-5-2-6-3-7" for every key. "4-1-5-2-6-3-7" for any one key is seven consecutive letter in the series where the second of the seven is the name of the key ("1").

Fb-Cb-Gb-Db-Ab-Eb-Bb-F-C-G-D-A-E-B-F#-C#-G#-D#-A#-E#-B#

Chord root movement in descending perfect fourths is about as common as stepwise movement (see the next section). In any major scale the series of fifths is the number cycle "4-1-5-2-6-3-7". With triads in C major, this is "F-C-G-Dm-Am-Em-B diminished". With triads in F major, it is "Bb-F-C-Gm-Dm-Am-E diminished".

See Learning Keys with Chord Progression/Scale-Tone Chord Progression/[Chord Progression in Stepwise and Fourths Order](#). Fourths in reverse order is fifths. In that section, a page is shown for every key. For the key featured on each page, the scale-tone chord progression in perfect fourths (7-3-6-2-5-1-4) is shown. Play it in reverse order for fifths.

Losing My Religion

Take Five

Pairs of Chords in Ascending Fifths

Hotel California (verse: VI-III, V-II, IV-I, II-III; chorus: IV-I-II-VI-IV-I, II-III)

In the verse, each of the first three pairs of chords ascend their root by a fifth. The first, third and fifth chords of the verse (VI, V, V) descend their roots stepwise. In the chorus, each of the first two pairs of chords ascend their root by a fifth. The second and third chords of the chorus (I-II) ascend their roots stepwise.

STEPWISE ROOT MOVEMENT

Stepwise order is about as common as descendering roots in fourths (see the previous section). Roots ascend or descend in alphabetical order. With triads, all three notes ascend or descend one tone. The I major triad (C major) is constructed with scale tones 1-3-5 and the II minor triad (Dm) is constructed with scale tones 2-4-6. So the voice leading ascends each note one scale tone.

With seventh chords using stepwise root movement, there is one common tone to each pair of chords. The “C” note, scale tone “1” of the C major scale is both the root of the Ima7 and seventh of the IIIm7. Ima7 (Cma7: 1-3-5-7 or C-E-G-B) is 1-3-5-7 and IIIm7 (Dm7: 2-4-6-1 or D-F-A-C) is 2-4-6-1, share major scale tone “1”. See [Scale-Tone Seventh Progression/Major Scale-Tone Stepwise Seventh Chords](#).

RELATIVE MAJOR AND MINOR

Changing from I Major to VI Minor, or from VI Minor to I Major

This chord progression scheme changes from a key on I major (C) to a key on VI minor (Am). Or from a key on VI minor (Am) to a key on I major. A whole section of a song (verse or chorus, etc.) will be established in I major or VI minor and switch to the other in another section.

scale-tone triads and seventh chords in all keys

For each parent scale, “6” is the relative minor and “1” is the relative major.

scale tone →	1	2	3	4	5	6	7

Blues Origins

Blues is based on field hollars, slave work songs, black fife and drum songs. Here are links to related Spotify playlists:

[favorite field hollars and work songs](#)

[field hollars and work songs](#) (larger collection)

[black fife and drum songs](#)

[revival rhythm](#)

Around 2010, suspecting the origin of the twelve-bar blue progression in black southern gospel music, a thorough examination of 686 hymns in the African American Heritage Hymnal (edited by Rev. Dr. Delores Carpenter and Rev. Nolan E. Williams Jr.) found no twelve-bar blues chord progressions. None!

Hymns may have influenced early blues (1900-1914) where it originated in the American south, especially in New Orleans and Memphis, but hymns were not a direct origin. Blues was also part of the development of ragtime music.

Blues largely originated with the call and response form in field hollars.

I7-IV7

I7 and IV7 (C7 and F7) are the important key scale part of a blues. I7 is usually treated as key major (C Mixolydian, based on a C major triad) with some flat three blue notes. IV7 (F7) is treated like key minor (C Dorian, based on a C minor triad).

A few songs are based on the I7-IV7 progression (see the list below) and are good to study improvising in preparation for longer blues progressions.

Feelin' Alright improv - [click to play](#)

♩ = 89

The score is divided into six systems, each with a treble staff and a bass staff. The bass staff includes fingerings and a 'full' marking. The treble staff includes a 'full' marking at measure 13. The score ends with a final measure at measure 25.

Three systems of guitar tablature for improvisation exercises. Each system includes a treble clef staff with a key signature of one flat (Bb) and a common time signature. Chord symbols C9, F7, and C9 are placed above the staff. The first system (measures 26-29) features eighth-note patterns with triplets and 'full' markings. The second system (measures 30-33) continues with similar patterns and includes a '1/2' marking. The third system (measures 34-38) shows a progression of chords with various fret numbers and a final double bar line. Tablature lines are labeled T, A, and B, with fret numbers written below them.

Jessica piano style improv - [click to play](#)

Three systems of guitar tablature for Jessica piano style improvisation. The first system starts with a tempo marking of quarter note = 214. The key signature is two sharps (F# and C#). Chord symbols A and D are placed above the staff. The second system continues the progression. The third system (measures 18-21) shows a progression of chords with various fret numbers and a final double bar line. Tablature lines are labeled T, A, and B, with fret numbers written below them.

First system of musical notation (measures 1-4). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 1-4: Chords C, F, C, F. Fret numbers for T, A, B are provided below the staff.

Second system of musical notation (measures 5-8). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 5-8: Chords C, F, C, F. Fret numbers for T, A, B are provided below the staff.

Third system of musical notation (measures 9-12). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 9-12: Chords C, F, C, F. Fret numbers for T, A, B are provided below the staff.

Fourth system of musical notation (measures 13-16). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 13-16: Chords C, F, D, F. Fret numbers for T, A, B are provided below the staff.

Fifth system of musical notation (measures 17-20). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 17-20: Chords C, F, C, F. Fret numbers for T, A, B are provided below the staff.

Sixth system of musical notation (measures 21-24). The staff shows a treble clef, key signature of one flat (B-flat), and a common time signature. The melody consists of eighth and sixteenth notes, with some triplets. The bass line is indicated by a three-part staff (T, A, B) with fret numbers.

Measures 21-24: Chords C, E, C, F. Fret numbers for T, A, B are provided below the staff.

The image displays two staves of musical notation for guitar, each representing a 12-bar blues progression. The top staff features a progression of C, F, C, and F chords. The bottom staff features a progression of C, F, D, and F chords. Both staves include fretboard diagrams for the guitar, showing the fret numbers for each note in the progression.

Twelve-Bar Blues

Twelve bar blues always starts with the I chord and usually ends with the V chord. It is commonly three four-bar phrases. Folk blues, Piedmont blues and blues rock begin the last four bar-phrase (bars nine and ten) with V and IV chords, while jazz blues (also called swing blues) use IIm and V for bars nine and ten. In the 1940's, songs that began electric blues often used IIm and V for bars nine and ten, but as electric blues split off into blues rock and jazz blues, the jazz blues used VI-IIm-V for bars eight through ten, while blues rock used I-V-IV for bars eight through ten.

The many variations of bars eleven and twelve used in blues rock can be seen in the chapter "[Twelve-Bar Blues Endings](#)".

A intro solo

6 

10 

14 solo 1

The musical score for 'solo 1' is written for a guitar. It begins with a treble clef and a key signature of three sharps (F#, C#, G#). The tempo is marked '14'. The score is divided into four measures. The first measure contains a whole note chord of A2, A3, and A4, with a '1' below the staff. The second measure contains a whole note chord of D2, D3, and D4, with a '1' below the staff. The third measure contains a whole note chord of A2, A3, and A4, with a '1' below the staff. The fourth measure contains a whole note chord of A2, A3, and A4, with a '1' below the staff. Below the staff, there are four lines of tablature. The first line is labeled 'T' and contains a '1' under the first measure. The second line is labeled 'A' and contains a '1' under the first measure. The third line is labeled 'B' and contains a '1' under the first measure. The fourth line is labeled 'C' and contains a '1' under the first measure.

The musical score is written for guitar in G minor (two flats: Bb and Eb). It is in 4/4 time with a swing feel, indicated by the 'Swing Sixteenths' tempo marking and the tempo of 116. The score is divided into five systems, each with a treble clef staff showing notes and rests, and a bass staff showing fret numbers for guitar. Chord symbols are placed above the staffs to indicate the harmonic structure. The progression starts with Gm7 and includes various other chords like Eb7, Gm/D, D7, F/G, and F. The score includes improvisation lines marked with 'x' and 'o' symbols. The piece concludes at measure 19.

Moonchild Blues - [click to play](#)

♩ = 113

The score is written for guitar and bass in 4/4 time, with a tempo of 113 bpm. The key signature has two flats (B-flat and E-flat). The guitar part is in standard notation, and the bass part is in tablature. Chord progressions are indicated above the staff.

Chord Progressions:

The musical score for "The Wind" by John Williams is presented in a standard musical notation format. The key signature is G major (one sharp) and the time signature is 4/4. The score is divided into three main sections: A, B, and C#.

Section A: The guitar melody begins with a treble clef and a key signature of one sharp. The melody is characterized by a series of eighth and sixteenth notes, often with grace notes. The double bass accompaniment consists of a steady eighth-note pattern in the right hand and a bass line in the left hand. The section is marked with a piano (p) dynamic.

Section B: This section continues the melodic and harmonic themes established in Section A, with the guitar melody featuring more complex ornamentation and the double bass providing a consistent rhythmic foundation.

Section C#: The final section of the score, marked with a C# key signature, features a more active and varied melodic line for the guitar, while the double bass continues its accompaniment. The section concludes with a final chord and a double bar line.

The score includes various musical notations such as clefs, key signatures, time signatures, notes, rests, ornaments, and dynamic markings (piano, forte). The guitar part is written on a single staff, and the double bass part is written on a single staff. The score is presented in a clear and professional layout, suitable for a musical score book.

B SECTIONS AND BRIDGES

A bridge or B section is used to connect between verse and chorus (or between two verses), usually in a closely related key, as a diversion from the main key. They are commonly in the key of IV (“F” in the key of “C”), or in the key of “V” (“G” in the key of “C”).

Bridges and B sections provide a diversion from the main story. If the song has lyrics, the bridge or B section usually provides a “sidebar”, taking you aside to give you another perspective on the story. Bridges and B sections usually end with a chord progression that returns to the main key, such as “II-V-I”.

The *middle eight* is a type of bridge that usually occurs between two choruses (commonly between the second and third chorus) using different melody and usually different chord progression. The middle eight can chose from a wide variety of chord progression types.

SLASH CHORD PROGRESSION

“Slash” Chords Specify a Bass Note

“Cm/Bb” is a slash chord and specifies a C minor chord with a “Bb” bass note. Slash chords may or may not imply the indicated bass note in the part of the chord name preceding the slash (Cm). If the “Bb” note were included, the chord could be called “Cm7/Bb”. These are alternate names and both names, Cm/Bb and Cm7/Bb imply the same notes. With the “Cm7/Bb” version of the name, the chord without the bass note does not have to include the “Bb” note. The “Bb” note can optionally occur only in the bass.

A Single Chord with an Ascending or Descending Bass

ascending or descending scalar bass

Am-Am/G#-Am/G-Am-F# implies a series of chords that share the Am chord and use the bass sequence A (the root of Am)-G#-G-F#. Slash chords often have alternate names called chord synonyms, such as Am/F# and its alternate names Am6 and F#m7b5. Usually the common chord part of the name (Am) is used with all the chords to imply that part of the chord is preferably kept intact (keeping the notes in the same octave and voicing) and only changing the specified bass note.

ascending or descending arpeggio tones of the chord preceding the slash

This series is usually not specified in music notation, but is a conceptual manner of conceiving and playing inversions of a chord. Am7-Am7/C-Am7/E-Am7-G implies a series of Am7 chords with the root (“A”), third (“C”), fifth (“E”) and seventh (“G”). Note that the third of Am7 (“C”) is actually a flatted third in the key of the chord root (A major) and the the seventh of Am7 is actually a flatted seventh (“G”) in the key of the chord root (A major). It is common practice to refer to them as the “third” and “seventh” when it is understood that those notes would be altered.

Colorful Chord Qualities Produced with Specified Bass Notes

Usually producing a suspend chord of sorts, some specified bass notes in slash chords are not part of the continuous series of thirds in the part of the chord name preceding the slash. “A/B”, for example, could be called B9sus4 no fifth. These chords commonly use the second or fourth in the key of the chord name preceding the slash in the bass.

MODAL INTERCHANGE (CHANGE OF MODE)

When the tone center (C) remains on the same note while the mode (scale type) changes (C Mixolydian to C Aeolian), parallel keys are being used. Most commonly, major to Aeolian. With modulation, the tone center changes (C major to A minor or to G major).

Keys can occur on multiple modes of the same parent scale, in which case each mode is a different key (or temporary key).

Hidden Roots

Negative Harmony

See a more thorough study of negative harmony in “[Substitution](#)”/Categories of Substitute Chords/[Negative Harmony](#).

Negative harmony (also called dualism) provides an alternate set of notes and chords to create tension and release with the notes of a diatonic scale such as the major scale. It is a perspective of harmonic

music theory that came from science and math studies. It determines an axis half-way between the tonic (C in C major) and the dominant (G in C major). From that axis, for each ascending interval, it mirrors the interval downward. This is calculated with frequency (cycles per second) and is approximated the twelve-tone equal tempermant system that we use.

You don't need to understand the scientific basis of this theory to use it. Use alternate chords this system provides as alternatives in composition and improv. Test all the negative harmony alternate chords you use. They are much less dependable and predictable than chords build on the major scale and its modes.

negative harmony chords by letter

The table beow shows negative harmony triads, seventh chords and and ninth chords in C major by letter. The original major scale-tone chord is in the left of each counmn (C, C_{ma}7, C_{ma}9) and the respective negative harmony on the right (C_m, Ab_{ma}7, F_m9). The circle diagrams show chord tones for all keys. To spell each chord, use the circle diagrams. Triads use three consecutive notes, beginning with the root (letter name of the chord). Seventh chords use four consecutive notes. Ninth chords use five consecutive notes. See diagrams and tables for negative harmony in all keys in “[Substitution](#)”/Categories of Substitute Chords/[Negative Harmony](#).

Ambiguity

REMOTE MODULATION AND QUASI-DIATONIC CHORD PROGRESSION

The Parent Scale

The parent scale for the mode in use is one of the four harmonize-able seven-tone scales (major scale, harmonic minor, melodic minor and harmonic major). Major sharp five is the basis of harmonic minor and can be used as a parent scale. The parent scale for D Dorian is C major scale. The parent scale for A harmonic minor is C major sharp five. See the chapters "[Modes](#)" / Modes of Four Heptatonic Scales and [Key Signatures](#).

Remote Modulation

Changing to a key with many changes of sharps or flats (accidentals) and/or a change of mode is jarring to the listener and makes a *remote modulation*. The total number of changed accidentals can be (1) the total of added sharps and deleted flats or (2) the total of deleted sharps and added flats. B major, for example, has five sharps (F#, C#, G#, D#, A#) and F major has one flat (Bb), so changing from B major to F major is a change of six accidentals.

Up Or Down A Half Step Is Mildly Remote

When you change seven accidentals, the parent scale, the key is changing chromatically. This could be either (1) a total of seven added sharps and deleted flats or (2) a total of seven deleted sharps and added flats.

Shared Tones

More shared tones (but not none) between the original and new mode make the modulation less remote. Fewer shared tones (but not none) between the original and new mode make the modulation more remote. No shared tones makes the modulation chromatic.

EXTENDED CHROMATIC VOICE LEADING

Voice leading to every chromatic top-voice note from every chromatic bass note. See [“Top Voice-Leading Cadences in Song Progressions”/Top-Voice-Lead Any Chord with Any Key Tone.](#)

Table of All Top-Voice Cadences

chord root , top-voice numbering and parent scales

The chord roots numbered at the top of the columns and the top-voice tones numbered at the left of each row are numbered in terms of the parent scale. See [Key Scales, Parent Scales and Chord Scales/Parent Scale](#). The top-voice numbers after a back slash (“\”) in each chord name are in the key of the chord root.

“back slash” (“\”) chords

The top voice tone for each chord in the table is shown by number after a backslash (“\”). “7b9\b2” is a seven flat nine chord with “b2” in the key of the chord root as the highest pitch. With the root on “C”, “7b9\b2” would be C7b9\Db specifying a chord with C-E-G-Bb-Db where “Db” is the highest pitch. Forward slash chords specify a bass note, where C7/Bb is a C7 chord with “Bb” in the bass. These two forms of slash can be combined. “C7/Bb\E” is a C7 chord with “Bb” in the bass and “E” as the highest pitch.

columns have roots ordered in fourths

Since columns organize the chord roots in perfect fourths, any three consecutive chords in a row can be used as a II-V-I cadence, where the third chord is the temporary key (or permanent key if the duration and emphasis is great enough).

secondary dominant (“SD”) rows and mood

Using alternate chords from the secondary dominant row makes a cadence more dramatic and stronger. See the Secondary Dominant chapter. The secondary dominant chords are darker in mood. Don’t change moods too frequently. A few dark consecutive altered dominant chords can move to a major seventh, sixth or other chord of a bright mood with a pleasing effect. A three-chords sequence with dark angry chord to bright happy chord to dark angry chord can be confusing, especially if the change is fast. The effect of mood changes is time-based, so take that into account in sequencing chords in an arrangement.

flat five substitute (“b5 sub.”) rows

Chords from the flat five substitute provide an alternate for the secondary dominant. The flat five substitute chords are usually dominant type or altered dominant chord with their chord root on a note a flattened fifth from the s secondary dominant chord. In some cases, they are 7sus4 or major seventh to accommodate the needed top voice tone.

BASIC COMPING, MELODY AND IMPROV

Work up a version of comping and melody in a simple manner on each song. Use both auditory and print resources. Just because it is in print, doesn't mean its correct. First play the melody and comping separately. If you can combine them as a chord solo or some kind of arrangement, that's great, but don't let that prevent you from getting a working version of the comping and melody right away.

cycle through a short list of songs

Practice a few songs at a time to make it interesting. You also can study batches of songs that cover the same subject, such as the same type of chord progression, melodic or harmonic structure or technique. Make a list of three to ten songs, closer to three. Play them all in three stages.

Work an Element into Your Improv

practice a new element

Play a set of and element for a few minutes, then integrate them into free improv. Constantly look for areas of improvement and new ideas. Exercise a technique in a progressive manner with a few instances, like a set of bend exercises. Find a new [melodic cell](#) and practice it up and down a scale or arpeggio. Practice set of rhythms to use in your comping or soloing. See [Comping Rhythms](#) and "[be inventive rhythmically](#)".

work the element into your improv

Now improvise a guitar part in your existing style, without introducing the new element at first. After minute or two, work the new element into your improv. Spend as much time or more improvising than you did exercising.

within a couple days, use the integrated improv in jamming or performing with someone

At least, play in in performing state of mind, as if you are being heard by an audience. By practicing an element, then working it into your improv, now you need to use it in some sort of performance in the next few days, before it is lost. If you use it in performance soon enough, it can get integrated into your playing, and review effortlessly as you perform!

SEVENTH CHORD SONG LIST

The songs below were ordered according to the complexity of their chord progression. One “point” was given for each major II-V-I, minor II-V-I-bII, sequence of fourths cadence or complex key change (shown by an asterisk after the number of keys in the last column).

Minor Key Songs

	major II-V	minor II-V	bII (of target) (mel.min.IV)	fourths	chromatic K=key voice C=chord voice	stepwise 3 or more	keys	favorite fake book

Eleanor Rigby

E Aeolian (G major scale, with "E" on "6") can be used melodically throughout by avoiding sustain and repetition of the "C" note during the Em6 chord. The Em6 has a "C#", which we want to avoid combining with "C" (avoid the "4" of the parent G major scale). After mastering that approach, *then* work at changing to the E Dorian scale during the Em6 chord.

IIm-V (Im-IV) SONGS

IIm-V Will Be Referred to as “Im-IV”

In terms of the parent scale (C, for example), we are discussing “IIm-V” (Dm-G). Since the tone center will be on IIm, in Dorian mode. IIm (Dm) will be called Im (Dm), thinking in the Dorian (D Dorian) key on “II” of the parent scale. The “V” (G) chord in the original IIm-V would then be numbered “IV” (G is IV of D).

IIm-V (Im-IV) Songs to Improvise On

“IR” in the “IR” column indicates that the song is in the [All Favored iReal Pro](#) (link) playlist (download the playlist to be able to open it in iReal Pro). Titles followed by “*” elaborate a little on the Im-IV progression. Titles followed by “**” elaborate a little on the Im-IV progression. Use this [Spotify playlist](#).

[Use Me Link to Use Me backing track in Em](#) (MFLy Music). [Link to Use Me comping.](#)

Minor Pentatonic Licks

Im7 & IV7 Arpeggios

See [Prime Chords, Scales and Arpeggios/Quadrad Arpeggios](#)-E form form m7th arpeggio & A form 7th arpeggio. Practice this Im7-IV7 arpeggio exercise.

Four-Note Im Pentatonic Cells, Beginning on a Im7 Chord Tone

Practice ascending or descending I minor pentatonic from each of the Im7 chord tones (1-b3-5-b7), starting on the beat with four ascending or descending four sixteenth notes (or four eighth notes at a fast tempo) of the I minor pentatonic scale. Improvise through the remainder of Im7 and all of IV7. Segue the harmonic cells into and out of Im pentatonic licks.

Four-Note Im Pent. Cells, Beginning on a Im7 or IV7 chord tone

Play four-note linear sixteenth-note harmonic cells using I minor pentatonic, starting with Im7 tones beginning on beat one of Im7 and with IV7 tones beginning on the first beat of IV7.

Practice ascending or descending I minor pentatonic from each of the Im7 chord tones (1-b3-5-b7), starting on the beat. Practice ascending or descending I minor pentatonic from each of the IV7 chord tones starting on the beat. When you begin on the third (3) of IV7, continue by ascending or descending to the nearest tone of I minor pentatonic, then continue in Im pentatonic. Segue the harmonic cells into and out of Em pentatonic licks. Use rhythmic theme and variation by replaying the four note cell earlier or later in the bar and by syncopating it.

E Form, A Form and D Form Dorian Scale Fingerings with I7, I9, IV7 and IV9 Arpeggio Subsets

The preferred forms for minor arpeggios and minor pentatonic are E form, A form and D form. Dorian fingerings use major scale fingerings with the tone center on "2". See [Major Scale Summary/Fingerings](#). You may want to study all the E form examples below at once and practice improvising in E form, then do the same for the A form examples and for the D form examples.

black and grey color-coding in the diagrams below

In the seventh diagrams below, the black tones are the seventh arpeggio and the remaining tones complete the Dorian mode.

In the ninth diagrams below, each octave of the ninth arpeggio is shown in grey. The remaining "4" and "6" tones complete the Dorian mode.

In the "4-7" type pentatonic diagrams below, the triad is black tones and the grey tones are the added "4" and "b7" to complete the minor pentatonic arpeggio, while adding all the remaining tones completes the Dorian mode. 4-7 pentatonic scales are modeled after minor pentatonic which adds 4 and b7 to a minor triad.

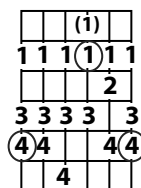

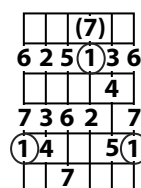

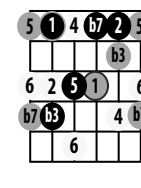

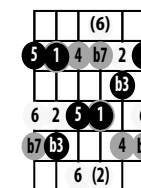

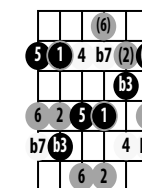

In the "2-6" type pentatonic diagrams below, the triad is black tones and the grey tones are the added "2" and "6" to complete the major pentatonic scale, while adding all the remaining tones completes the Dorian mode. 2-6 pentatonic scales are modeled after major pentatonic which adds 2 and 6 to a major triad.

The I Dorian scales are numbered in I Dorian, so the root of the Im7 or Im9 chord is "1" on the Dorian diagrams. The IV Mixolydian scales are numbered in IV Mixolydian, so the root of the IV7 or IV9 chord is "1" on Mixolydian diagrams.

Linear Harmonic Cells

Practice ascending or descending I Dorian with four sixteenth notes (or four eighths at a fast tempo) from each of the Im7 chord tones (1-b3-5-b7) and starting on the beat at the beginning of the chord. Segue pentatonic and Dorian harmonic cells into and out of Im pentatonic licks. Do the same with six note cells per beat (or two triplets during two beats).

Octatonic and Hextatonic Scales

Octatonic (eight-tone) scales can be used to play linearly and assure that you are playing a chord tone of a particular seventh chord on every beat. Hextatonic (six-tone) scales can be used to play linearly and assure that you are playing a chord tone of a particular triad on every beat. Learn octatonic and Hextatonic scales to be able to start on a particular note and ascend or descend linearly through the entire range of the scale and change direction at any time.

build octatonic scales

Octatonic scales are made by adding a sharp five to a mode that has a six or by adding a natural seven to a mode that has a b7. By adding the #5 or 7, you can play linearly up and down and have a chord tone on every beat. You can change direct at any time. #5 puts sixth chord on the beat and 7 puts seventh chord tones on the beat. You can add 7 to Dorian to play linearly with chord tones on the beat. By thinking of tone four of Dorian as a tone center, it becomes IV Mixolydian. In Mixolydian, you can add 7 (in the

key of IV Mixolydian to playing linearly with IV7 tones on the beat or add #5 of IV Mixolydian to play linearly with IV6 tones on the beat. You can combine octatonic with arpeggios, but when you resume the scale, make sure you begin with a chord tone on the beat.

build hexatonic scales

Hexatonic scales can be made by adding a “2” to a 4-7 type pentatonic (like minor pentatonic) or by adding a “4” to a 2-6 type pentatonic (like major pentatonic).

Rhythmic Exercises

Play Im7, Im9, IV7 and IV9 arpeggios with pickups, pushes, rhythmic displacement and anti-metric grouping.

Pivot Tone Exercises

Play the E Dorian scale with each tone of Em9 and A9 as a pivot tone (separately). Include versions with the pivot tone on the beat and off the beat.

Thirds and Sixths

Double Stops

Chromaticizing

Study the chapters [Chromaticized Arpeggios](#) and [Chromaticized Scales on Arpeggios](#) and add those melodic devices to your Dorian improv.

1-6-2-5 SONGS

Breezin'

"rhythm changes"

Like I-IV-V blues, the I-VIm-IIIm-V chord progression in Breezin' is a foundation of jazz chord progression. I VIm IIIm V is commonly referred to as "rhythm changes", both because it is a common staple of a rhythm section and is the basis of the song from George Gershwin's American folk opera, *Porgy And Bess*, "I Got Rhythm".

standardizing chords

The chords are standardized to four-note seventh chords by elaborating smaller chords and abbreviating larger ones. A triad would be changed to the appropriate seventh chord type. If it is functioning as a I type chord, it would be a major seventh. If functioning as a VIm type chord, it would be a minor seventh. So, triads are elaborated to seventh chords.

Chords of five or more notes such as ninth chords can be abbreviated to seventh chords. With a ninth, simply omit the ninth. With a thirteenth, use only the seventh chord part of the thirteenth (root, third, fifth and seventh).

The A9sus.4 chord (or G/A) can be treated at first as A7, which would be the standardized version of A9. Afterward, you can go back to the progression and emphasize the "4" of the the A chord, making it suspended. This is treating the A7 as an Em7, the other component in a IIIm7-V7 chord change, where Em7 is the IIIm7 and A7 is the V7. Descending the seven of the Em7 one scale tone makes it A9 no root. See [Descend Seven](#) in the chapter, [Voice Leading](#).

original chord progression →	Dma7	Bm7	Em7	A9sus.4
standardized chord	Dma7 (as is)	Bm7 (as is)	Em7 (as is)	A7
original chord progression →	Dma9	G/A = A9sus4 no 5		
standardized chord	Dma7	A7		

seventh chords on secondary roots of I VIm IIIm V on string set 5-4-3-2

Each of these chords is acceptable as a ninth chord. The hypothetical IIIIm9 and VIIImb5b9 ninth chords on steps III and VII are not acceptable, since they would have flat ninths. We only find flat ninths acceptable on dominant chords (chords with a major third and flattened seventh). See All Scale Tone Chords/[Principles of Acceptable Dissonance](#) and Scale Ambiguity/Ambiguous Scales for Dominant Chords/[Comparing Dominants with Flat Nine](#).

Seventh chords of each ninth chord are shown below. To figure this out, you need to have the cycle of thirds in numbers memorized so you can figure out what is on the third of the current chord (see Note Sets, Structures and Design/Number and Letter Cycles/[Number Cycles](#)). You also need to know the

major scale-tone seventh chord qualities, so you can state the type of seventh chord on that note that is the third of the current chord. See Scale-Tone Seventh Progression/[Constructing Scale-Tone Seventh Chords](#).

Secondary roots are Ima9 is 1-3-5-7-2, so IIIIm7 (3-5-7-2) is on its third. VIm9 is 6-1-3-5-7, so Ima7 (1-3-5-7) is on its third. IIIm9 is 2-4-6-1-3, so IVma7 (4-6-1-3) is on its third. V9 is 5-7-2-4-6, so VIIIm7b5 (7-2-4-6) is on its third.

---------------	------------------------------------	-----------------------------------	-----------------------------------	------------------------------------

improv with scales

Practice improvising with D major pentatonic first, occasionally darkening with a b3. Practice D minor pentatonic with an optional major third and use it occasionally. Learn ninth arpeggios for each chord. See [Prime Scales, Chords and Arpeggios/Pentatonic Scales](#) and [Ninth Arpeggios](#).

Notice that the intro uses the I-VIm-IIIm-V “rhythm changes” from “I Got Rhythm”.

Design each arpeggio so you are moving by step to the next. If an arpeggio fingering is difficult to interface with another, consider using a few notes from a pentatonic or seven tone scale to connect.

modal double stops

Think in chord scale to work out double stops on each chord. When you actually improvise with them, work to keep focus on the key scale, D major. You probably want to use the double stops sparingly to retain more of a jazz style. They can be very useful in jazz though. You can hear them in Jim Hall’s playing, for example.

I Got Rhythm

First, prepare for improvising by abbreviating the chord progression. Record yourself playing the I-VIm-IIIm-V changes (Bbma7-Gm7-Cm7-F7). Simplify the progression with the arpeggios you practice by playing Gm9 over Bbma7-Gm7 and Cm9 over the Cm7-F7. Before playing with your track, play the arpeggios in a looped fashion that allows you to play nonstop for two bars each. Play with a metronome as you get started to make sure your performance of the arpeggios is strong rhythmically and consistent dynamically.

Next, change to one bar each arpeggio (still just Gm9 and Cm9).

Coordinate the transition from one arpeggio to another, so they change by step and not by skip.

When you’re ready to add more, start playing 1-2-3-5 on F7b9 of Bb harmonic minor to lead into Bb in the first bar. Target the root, third or fifth of Bb.

The most common chord root movement in jazz (and popular music in general) is perfect fourths: 7-3-6-2-5-1-4. In Bb, that is A-D-G-C-F-Bb-Eb. Memorize the sequence of fourths in letters: B-E-A-D-G-C-F. This is used for the accumulative order of flats and is the cycle of fifths backwards. You need to be able to consider a key signature, start on the seventh degree of the scale, recognize that seventh degree’s location in B-E-A-D-G-C-F, and cycle to the end and back from the beginning to include all seven letters. Of course, you must apply the key signature’s flats or sharps and associate the letters respectively with 7-3-6-2-5-1-4, having started on “7”.

In Bb, B and E are flat. The seventh degree of the scale is “A”. Cycling through the order of fourths from “A” and applying the key signature produces A-D-G-C-F-Bb-Eb, corresponding with the numbered tones as follows, including seventh qualities:

7	3	6	2	5	1	4
Am7b5	Dm7	Gm7	Cm7	F7	Bbma7	Ebma7

Bb-Gm-Cm-F, beginning on the Gm is 6-2-5-1

Eb6 in bar 6 is a IV chord in the same emotive family as Ebma7 (Ima7 type).

Edim7 is #IVdim7 and is commonly used during the later of the duration of the IV7 or IV9 chord. It a IV7 chord with a sharped root.

In bar 7, the perfect fourth root sequence is extended to begin on the III chord, Dm7. This makes the progression 3-6-2-5-1, D-G-C-F-Bb.

3-6-2-5-1 Songs

MODAL SONGS

On each modal song, use these two standard layered steps. They build on one another and can be used simultaneously. You can come back to them later and add harmonic minor, melodic minor and arpeggios.

Layer One - Pentatonic Scales

Establish a blues or swing basis. Elaborate with chromatics, using minor pentatonic with chromatics between four and five. See [Movable Pentatonic Scales With One Chromatic](#).

Optionally, microtonal bends on the flatted third. If the chord you are using the microtonally bent flat third on is a minor chord, make the bend slight, so it doesn't make the chord sound major.

If the chord on the same root you are using a microtonally bent flat third on is major (such as a D minor pentatonic scale on a D major chord), the microtonal bend can go higher, but don't get too close to the natural third (without bending all the way to it), or your note may sound erroneously flat.

Layer Two - Pentatonic Scale Subsets of Modes

Complete the heptatonic (seven-tone) scale mode, such as F minor pentatonic as a subset of F Aeolian, where you would add the two and flat six to complete the mode.

BLUES SONGS (JAZZ)

Use these standard four layers in blues without harmonic minor nor melodic minor. They build on one another and can all be used simultaneously. Make these a basis of your harmonic minor improv. Blues with harmonic minor and melodic minor will be approached later in the sections on each of those subjects, [Harmonic Minor Cadence Songs](#) and [Melodic Minor Cadence Songs](#).

For now, the third layer will make major scale modes more complex by darkening, using a mode with flatted notes.

Layer One - Pentatonic Scales

Establish a blues or swing basis. Elaborate with chromatics, using minor pentatonic with chromatics between four and five. See [Movable Pentatonic Scales with One Chromatic](#).

Optionally, microtonal bends on the flatted third. If the chord you are using the microtonally bent flat third on is a minor chord, make the bend slight, so it doesn't make the chord sound major.

If the chord on the same root you are using a microtonally bent flat third on is major (such as a D minor pentatonic scale on a D major chord), the microtonal bend can go higher, but don't get too close the the natural third (without bending all the way to it), or your note may sound erroneously flat.

Layer Two - Pentatonic Scale Subsets of Major Scale Modes

Complete the major scale mode, such as D minor pentatonic as a subset of D Aeolian, where you would add the two and flat six to complete the mode.

Layer Three - Darkening Modes

This layer will complex what is done in layer two on blues by using modes with flatted tones, especially flat three and flat seven. These tones darken the mood and are the essence of African American coloration of European harmony.

The development of blues and jazz added Dorian and Mixolydian modes to the previous Ionian (major, such as a "C" major tone center with a "C" major scale) and Aeolian (major mode VI, such as an "A" tone center with a C major parent scale). Previous to the development of American blues and jazz [the relative major and minor system](#) used major scale tones one and six as the common tone centers. Mixolydian darkens major by flatting the seventh step of the major scale.

Flatting notes makes scales sadder or bluesier in mood. The mood of a "C" major scale is darkened with a flatted seventh is "C" Mixolydian and further darkened with Dorian, which has both a flatted third

and flatted seventh. See [Modes](#), [Modes On I IV V Blues](#), [Modes On Jazz Blues](#) and [The Expressive Use Of Modes](#).

Major chords are happy and bright in mood, minor chords dark and sad. The emotive character of a scale is based on its tonic triad, made up of its first, third and fifth steps. In major and Mixolydian modes, built on the first and fifth steps of a major scale, the tone triad is major, therefore bright and happy in mood. In Dorian and Aeolian modes, built on the second and sixth steps of a major scale, the tonic triad is minor, therefore dark and sad in mood.

Major and Mixolydian differ with their seventh. Mixolydian has a flatted seventh, which darkens it. The four-note tonic seventh chord in Mixolydian is dominant seventh. It has a disrturbing, dissonant flatted fifth interval between its third and seventh. At the same time, it has a bright-mooded major triad as its basis (root, third and fifth). The triad comprised of its third, fifth and seventh is diminished, a very dark (depressed) mood. This makes a troubled hybrid of happy, depressed and angry moods.

The major seventh chord built on the first step of Ionian mode (major scale mode one, such as a “C” tone center with a “C” major scale) is a hybrid of moods also. The triad built on its third, comprised of its third, fifth and seventh is a minor. Combined with the major triad built on its root, it has the romantic hybrid of happy and sad.

Dorian mode (major scale mode two, such as a “D” tone center with a “C” major scale) differs from Aeolian mode (major scale mode six, such as an “A” tone center with a “C” major scale) in that Dorian has a brighter-mooded major sixth. Aeolian’s flat sixth is darker in mood.

We have heard alot more Aeolian melody than Dorian. So much more that we can accept Aeolian melody played when the chord progression directs Dorian, as long as the flatted sixth (the distinguishing note) is not sustained too long. Usually two seconds is the limit for notes that disagree with the harmony. See [The Two Second Rule](#) in [Melodically Superimposed Cadences](#) and [The One To Two Second Rule](#) in [Melodic Cells](#).

Layer Four - Arpeggio Cadences

Learn the arpeggios for each of the chords in the song you are preparing to improvise on. See [Scale-Tone Seventh Chord Progression](#). It is very useful to first express the chord progression with chord fingerings, then with arpeggios and look at the nature of [voice leading](#). See [descend five and seven](#) and [descend seven](#).

modal pedal point

The feature of Freddie Freeloader and All Blues from Miles Davis' Kind Of Blue is pedal point progression. They are uncommon cases where the head is based on the accompaniment. Each uses an accompaniment figure that was used long before Kind Of Blue.

Modal pedal point triads, as used on Freddie Freeloader work best from the root of each chord, since other chord tones would suggest a different root.

Modal pedal point thirds, as used on All Blues can be built on root, third, fifth or seventh. They produce a rich library of chords, including many cool dissonant ones where the lower tone of the third is an upper or lower neighbor to the chord tone.

the six nine chord progression in Bb

Freddie Freeloader uses triads with a pedal tone. It features the I and IV chords (Bb and Eb), each with the root retained in the bass with a VIIm triad moving to a Vm triad. These are part of Bb6 and Bb9 chords, so I call the pair a "six nine" chord progression.

During Bb, play VIIm to Vm (Gm to Fm) over Bb bass.

Bb6 is steps 1-3-5-6 of a Bb major scale (see the cycle of thirds below). Without the fifth, the tones “6-1-3” make a VIIm chord in Bb major. So, VIIm can be thought of as the first chord in this “six nine” chord voicing.

Gm and Fm are IIIIm and IIIm triads in Eb major.

first inversion Eb major scale-tone triads on string set 432 (third in bass)

the second row of numbers (3-5-1, 4-6-2, etc.) show numbers tones of the parent Eb major scale

I major 3-5-1	II minor 4-6-2	III minor 5-7-3	IV major 6-1-4	V major 7-2-5	VI minor 1-3-6	VII diminished 2-4-7	I major 3-5-1
Eb III	Fm V	Gm VII	Ab VIII	Bb X	Cm XII	D dim. XIII	Eb XV

Notice the fingering strategy in this linear string set of triads is that the third finger is retained on the fourth string. This facilitates faster chord changing. Similarly, the redundant barre in both the second inversion and root position below (after the circular diagram) allow faster chord changing.

As you can see, the notes above on strings 4-3-2 are those of Gm and Fm, the VIIm and Vm chords in the key of Bb (see below). In the parent scale Eb (see [Modes Of I IV V Blues](#)), Gm and Fm are IIIIm and IIIm chords. Doesn't that make sense, given that IIIIm and IIIm are the two consecutive minor chords built on a major scale?

Gm VII	Fm V

Bb9 is steps 57246 of an Eb major scale (see the cycle of thirds below). In terms of the key of the chord root Bb, those tones (57246) are the root, third, fifth, flatted seventh and ninth of Bb9. The last three tones are “246” the parent scale Eb, the fifth flatted seventh and ninth of Bb9 and comprise a IIIm chord of the parent scale Eb. So.....Bb9 without a root and without a fifth is Fm, a Vm of Bb and a IIIm of Eb (the parent scale).

Here are alternate fingerings on string set 4-3-2. Now we've covered all three inversions: root, third and fifth in the bass. These are called *root position*, *first inversion* and *second inversion*, respectively. Notice that the sets don't necessarily start with the I major triad, but with whatever is at the lower end of the fretboard, since each set will span twelve frets from around the third to fifteenth position. This mimics the pianists ability to go up and down the inversions of a chord. It is more complicated for the guitarist, since we have six linear systems (strings) instead of one (the piano keyboard). For guitarists run up and down the inversions, we need to memorize more graphic shapes that the piano player does. See the inversions of the Eb major and Fm triads, below.

second inversion Eb major scale-tone triads on string set 4-3-2 (third in bass)

the second row of numbers (2-5-7, 3-6-1, etc.) show the numbered tones of the parent Eb major scale

this fingering set uses a "redundant barre"

V major 2-5-7 Bb III	VI minor 3-6-1 Cm III	VII dim. 4-7-2 D dim VI	I major 5-1-3 Eb VIII	II minor 6-2-4 Fm VIII	III minor 7-3-5 Gm X	IV major 1-4-6 Ab XIII	V major 2-5-7 Bb XV
5 1 3	5 1 b3	b5 1 b3	5 1 3	5 1 b3	5 1 b3	5 1 3	5 1 3

root position Eb major scale-tone triads on string set 4-3-2 (root in bass)

the second row of numbers (246, 357, etc.) show the numbered tones of the parent Eb major scale

this fingering set uses a "redundant barre", except for the retained third finger on the D diminished triad

II minor 2-4-6 Fm I	III minor 3-5-7 Gm III	IV major 4-6-1 Ab IV	V major 5-7-2 Bb VI	VI minor 6-1-3 Cm VIII	VII dim. 7-2-4 D dim IX	I major 1-3-5 Eb XI	II minor 2-4-6 Fm XIII
1 b3 5	1 b3 5	1 3 5	1 3 5	1 b3 5	1 b3 b5	1 3 5	1 b3 5

the six nine chord progression in Eb

During Eb, play VI_m to V_m (C_m to B_bm) over Eb bass.

Eb6 is steps 1-3-5-6 of a Eb major scale (see the cycle of thirds below). Without the fifth, the tones “6-1-3” make a VI_m chord in Eb major. So, VI_m can be thought of as the first chord in this “six nine” chord voicing.

Cm and Bbm are III^m and II^m triads in Ab major.

first inversion Ab major scale-tone triads on string set 3-2-1 (third in bass)

the second row of numbers (3-5-1, 4-6-2, etc.) show numbers tones of the parent Eb major scale

Notice that the fingerings above facilitate faster chord changing with a redundant barre.

As you can see, the notes above on strings 3-2-1 are those of Cm and Bbm, the VI^m and V^m chords in the key of Eb (see below). In the parent scale Ab (see [Modes Of I IV V Blues](#)), Cm and Bbm are III^m and II^m chords (III^m and II^m are the two consecutive minor chords built on a major scale).

Eb9 is steps 5-7-2-4-6 of an Ab major scale (see the cycle of thirds below). In terms of the key of the chord root Eb, those tones (5-7-2-4-6) are the root, third, fifth, flatted seventh and ninth of Eb9. The last three tones are “2-4-6” the parent scale Ab, the fifth flatted seventh and ninth of Eb9 and comprise a II^m chord of the parent scale Ab. So....Eb9 without a root and without a fifth is Cm, a V^m of Eb and a II^m of Ab (the parent scale).

See [Pedal Point Chord Progression / “Six Nine” VI^m V^m Triads With Pedal Point “1”](#), and especially [Scale-Tone Triads Of Four Heptatonic Scales](#) for fingerings (in this case, the major scale fingerings).

second inversion Ab major scale-tone triads on string set 3-2-1 (third in bass)
 the second row of numbers (2-5-7, 3-6-1, etc.) show the numbered tones of the parent Eb major scale
 this fingering set uses a “redundant barre”

I major 2-5-7 Eb III	II minor 3-6-1 Fm IV	III minor 4-7-2 G dim. VI	IV major 5-1-3 Ab VIII	V major 6-2-4 Bbm IX	VI minor 7-3-5 Cm XI	VII diminished 1-4-6 Db XIII	I major 2-5-7 Eb XV

root position Eb major scale-tone triads on string set 4-3-2 (root in bass)
 the second row of numbers (1-3-5, 2-4-6, etc.) show the numbered tones of the parent Eb major scale
 this fingering set retains the third finger on the third string

II minor 2-4-6 Bbm I	III minor 3-5-7 Cm III	IV major 4-6-1 Db IV	V major 5-7-2 Eb VI	VI minor 6-1-3 Fm VIII	VII diminished 7-2-4 G dim. IX	I major 1-3-5 Ab XI	II minor 2-4-6 Bbm XIII

Consider using neighboring scale-tone triads to enhance the six nine progression. Just before the parent scale III^m triad, use a parent scale IV major triad, or just before the parent scale II^m triad, use the parent scale I major triad.

By learning all three inversions of the triads on a string set, you can then combine them within a confined area, such as this group of Eb parent scale triads to be used over a Bb root. Eb to Bb (the last two chords) forms a plagal cadence, while Cm to Bb forms what I call the “gospel” plagal cadence, a cool modern version. Each progression is shown with triads, then with the Bb pedal point included.

more major scale-tone triad inversions

To more thoroughly study the major scale-tone triad inversions, see these sections of Pedal Point Progression:

[major scale-tone triads on string set 4-3-2](#)

[major scale-tone triads on string set 4-3-1](#)

[major scale-tone triads on string set 5-4-3](#)

the six nine chord progression in Ab (using Eb melodic minor)

Miles didn't use the six nine progression on Ab7 in the first ending, but could have. By treating Ab7 as a IV7 type of an Eb melodic minor parent scale, the VIIm and VIm (Fm and Ebm) chords of the chord scale Ab could be used. These are IIm and Im in the parent scale Eb melodic minor.

I minor b3-5-1 Ebm III	II minor 4-6-2 Fm V	III augmented 5-7-b3 Gb aug. VII	IV major 6-1-4 Ab VIII	V major 7-2-5 Bb X	VI diminished 1-b3-6 C dim. XI	VII diminished 2-4-7 D dim. XIII	I minor b3-5-1 Ebm XV
b3 5 1	b3 5 1	3 #5 1	3 5 1	3 5 1	b3 b5 1	b3 b5 1	b3 5 1

Fm V	Ebm III
b3 5 1	b3 5 1

Mr. P.C. string set 6-4-3-2**Cm7****Fm7****Ab7****G7**

Combine Ab7 and G7 to make a four chord sequence during two bars:

Ab7

Mr. P.C., scales for improv

Use key minor pentatonic (C minor pentatonic). Its preferable to use key b6 on the IVm chord (Fm7). Use parts of Im9, IVm9 bVI9 and V7b9 (Cm9, Fm9, Ab9 and G7b9). Its best at this point to learn the arpeggios here: [Minor Pentatonic To Five Ninth Arpeggio Types](#).

Using key (F) Aeolian b5 on the bVI7 (Ab7) chord retains the key. In terms of chord scale, it is bVI Lydian b7 (Ab Lydian b7) and in terms of parent scale, it is bIII (Eb) melodic minor.

In melodic minor, the triads on steps one and two are minor (Im and IIm). The six nine (“[Six Nine](#)” [VIm Vm Triads With Pedal Point “1”](#)) progression can be used on the Ab7 chord, since the VIm and Vm of Ab are the IIm and Im in Eb melodic minor.

Explore subsets of Ab13#11: Ab7 (Ab Lydian b7), Cm7b5 (C Aeolian b5), Ebm9[ma7] (Eb melodic minor) and Fm6, and D7#9b9#5b5 (D super Locrian). The family of bVI13#11 (Ab13#11) chords is paralleled by the II7#9b9#5b5 family (D#9b9#5b5, “Swiss army” seventh) which is II super Locrian (D super Locrian). See [Modes Of Four Heptatonic Scales](#). Ab13#11 and D7#9b9#5b5 are [flat five substitutes](#) of one another.

HARMONIC MINOR CADENCE SONGS

These four layers build on one another and can all be used simultaneously. Make these a basis of your harmonic minor improv.

Layer One - Pentatonic Scales

Establish a blues or swing basis. Elaborate with chromatics, using minor pentatonic with chromatics between four and five. See [Movable Pentatonic Scales With One Chromatic](#).

Optionally, microtonal bends on the flatted third. If the chord you are using the microtonally bent flat third on is a minor chord, make the bend slight, so it doesn't make the chord sound major.

If the chord on the same root you are using a microtonally bent flat third on is major (such as a D minor pentatonic scale on a D major chord), the microtonal bend can go higher, but don't get too close the the natural third (without bending all the way to it), or your note may sound erroneously flat.

Layer Two - Pentatonic Scale Subsets of Major Scale Modes

Complete the major scale mode, such as D minor pentatonic as a subset of D Aeolian, where you would add the two and flat six to complete the mode.

Layer Three - Harmonic Minor Modes and Subsets

Determine the relative major key for the minor key in which you wish to use harmonic minor. Use the relative major scale as a parent scale. Modify the parent major scale by sharpening its fifth and put the tone center on its sixth.

When using harmonic minor on chords that have a flatted seventh, such as Am7 in the key of "A", de-emphasize the natural seven (G#, which is sharp five of the parent scale). See the [table of major sharp five scales](#) in all keys, showing the harmonic minor scales they create on their sixth step.

Layer Four - Arpeggio Cadences

Learn the arpeggios for important cadences in the minor key, most commonly IIm7b5-V7b9-Im. Elaborate on the cadences with neighboring and passing scale tones. Take a look at major sharp five scale-tone seventh chords, especially the [Major Sharp Five Scale-Tone Seventh Chords](#) in the chapter on [Scale-Tone Seventh Chord Progression](#).

Descending five and seven of the IIm7b5 becomes V7. Descending only the seven becomes V7b9, no root. See [descend five and seven](#) and [descend seven](#).

MELODIC MINOR CADENCE SONGS

On each song, use these standard four layers. Make these a basis of your improv.

Modes of melodic minor are typically used in jazz to create cadences to target chords. They primarily use bII13#11 (Db13#11) of the target or V7 super-altered (G7#9b9#5b5) of the target (Cma7, C7 or Cm7). Sometimes, Lydian dominant, the scale version of 13#11 is used as a temporary target. Rarely, it is even used as a tonic chord, as in the Simpson's Theme.

melodic minor modes for setup chords

Setup chords in a cadence lead to the target chord. See [Target Chords And Setup Chords](#) in [Melodically Superimposed Cadences](#).

modes of Ab melodic minor scale used for a C target chord

tone of target	bVI	bVII	I	bII	bIII	IV	V
tone of mel. m.	I	II	bIII	IV	V	VI	VII
	Ab melodic minor	Bb Dorian flat two	C Phrygian flat one (Cb)	Db Lydian flat seven (Lydian dominant)	Eb Mixolydian flat six	F Aeolian flat five	G Locrian flat four (super locrian)

Three Most Usable Melodic Minor Modes

which mode should study first?

Study either Aeolian flat five or Lydian dominant first. Aeolian flat five is a familiar context for both improvisers and listeners. Lydian dominant harmonizes well. Lydian dominant also voice-leads well to the target. If you have not experienced improvising with either, choose Aeolian flat five. If you *are* experienced with Lydian dominant, start with it.

tension-release with V super Locrian

Super Locrian is the basis of the use of melodic minor in jazz. It creates super-altered V chords which create a lot of tension before resolving to the target I. It doesn't harmonize well, though. Aeolian flat five is much more conducive in making melodic phrases, with its strong relationship to dark minor melodies.

the flat five substitute

Chord synonyms share the same notes but have different names. Chords built in Lydian dominant (Lydian flat seven) are synonyms of those built in super Locrian. The basis of these synonyms is bII7b5 and V7b5, which have exactly the same notes. In the key of C, bII7b5 is Db7b5, and is a subset of bII (Db) Lydian dominant. In C, V7b5 is G7b5, and is a subset of V G) super Locrian.

Many other chords that are part of the bII13#11 chord (Db13#11, built from Db Lydian dominant) are synonyms of chords that are part of V7#9b9#5b5 (G7#9b9#5b5, built from G super Locrian). The G and Db chords below for example use the same notes, so could be played with either a “G” or “Db” bass note (on bass guitar or stand-up bass).

the dark minor blues sound of Aeolian flat five

Aeolian flat five can be very familiar, especially when based on minor pentatonic with a flat five (m7/11b5). It bears a strong relationship to Lydian dominant. Chords built in thirds in Lydian dominant *without* the root are synonyms of chords built in thirds in Aeolian flat five. Aeolian flat five works very effectively, but really functions as a part of chords built in Lydian dominant.

Ab melodic minor scale

I	II	bIII	IV	V	VI	VII
Ab	Bb	Cb	Db	Eb	F	G

A ninth chord is a five-note chord built with every-other note of a seven-tone scale, such as melodic minor. The ninth chord built on the fourth step of melodic minor using scale-tone numbers 4, 6, 1, b3 and 5 and is a IV dominant ninth or IV9 (Db9). A seventh chord is a four-note built with every other note of a seven-tone scale. The seventh chord built on the sixth step of a melodic minor scale uses scale-tone numbers 6-1-b3-5 and is a VI minor seventh flat five or VIm7b5 (Fm7b5). Without its root (“4”), the IV9 chord has the same notes as the VIm7b5 chord.

Using the table of numbered and lettered scale tones in the Ab melodic minor scale, you can see the letter names of the notes used to build a Db9 chord are Db, F, Ab, Cb and Eb, scale-tone numbers 4-6-1-b3-5. The Fm7b5 chord uses the same letters and numbers without the Db (“4”), 6-1-b3-5.

Inspect the Db9 chord below to see that it has the letters Db, F, Ab, Cb and Eb. The Fm7b5 chord has the same letters without Db.

Db9

III

	F		
Db		Cb	Eb Ab

Fm7b5

III

	F		
		Cb	Eb Ab

Elaborating the VIm7b5 (Fm7b5) chord with other tones of IV (F) Aeolian flat five of the target chord makes the same harmonic sounds as bII (Db) Lydian dominant chords but without the root (Db). It is a common practice to sound a part of a chord that makes another chord, such as the Fm7b5 and Db9 above. This can be studied extensively in [Secondary Roots](#), in the chapter on [Substitution](#). The elaboration of secondary roots with scales is discussed in [Secondary Tonics](#).

Lydian dominant, the most harmonizable melodic minor mode

The entire thirteenth sharp eleven (Db13#11) chord built on Lydian dominant is usable as an arpeggio. Its root, third and fifth voice-lead very well to the triad of the target chord. Aeolian flat five chords built on its third are [Secondary Roots](#) and provide a good alternative to Lydian dominant.

Aeolian Flat Five in Four Layers

layer one - pentatonic scales

Establish a dark minor blues basis with IV minor pentatonic with a flat five (Fm7/11b5). Resolve to the triad tones of the target chord.

Alternately, think of the IVm7/11b5 (Fm7/11b5) pentatonic scale as II major pentatonic with a flat three (Dm6/9). Play this scale in a swing style, particularly emphasizing its sixth ("B"). Optionally, Use major 6/9 fingerings in [Movable Pentatonic Scales With One Chromatic](#) with a flatted third.

layer two - m7/11b5 scale subset of Aeolian flat five

Elaborate the m7/11b5 pentatonic with Aeolian flat five. Fm7/11b5 is a subset of F Aeolian.

layer three - Aeolian flat five as a secondary tonic on Lydian dominant

Thinking of the IVm7b5 (Fm7b5 for a "C" target) as a secondary root chord on the third of Lydian dominant (Db Lydian dominant for a C target), think of IV (F) Aeolian flat five as being a mode built on the third of bII13#11 (Db13#11). See [Secondary Roots](#) and [Secondary Tonics](#).

layer four - arpeggio Cadences

Learn the arpeggios for the target ninth chord with no root. This will make a seventh chord on its third. See [Secondary Root On The Third](#). Resolve the IVm7b5 to that chord. For a C7 target chord, this is Fm7b5 to Em7b5 (C9 no root is Em7b5). For Cma7, it is Fm7b5 to Em7. For Cm7, its Fm7b5 to Ebma7.

Elaborate on the cadences with neighboring and passing scale tones. Study [Harmonic Clusters in the Tonal Layers chapter](#) and [Harmonic Clusters in the Double Stops chapter](#).

Lydian Dominant in Four Layers

layer one - pentatonic scales

Establish a swing-based bII major pentatonic melody (Dbma6/9 for a C target), especially emphasizing the sixth and use syncopated rhythm. Optionally, use chromatics for either scale as shown in [Movable Pentatonic Scales With One Chromatic](#).

layer two - bII major pentatonic subsets of bII Lydian dominant

Elaborate the bII major pentatonic with Lydian dominant, adding the sharp four and flat seven.

layer three - Aeolian flat five as a secondary tonic on Lydian dominant

Thinking of the IVm7b5 (Fm7b5 for a “C” target) as a secondary root chord on the third of Lydian dominant (Db Lydian dominant for a C target), think of IV (F) Aeolian flat five as being a mode built on the third of bII13#11 (Db13#11). See [Secondary Roots](#) and [Secondary Tonics](#). This is the same third layer as for Aeolian flat five, intentionally.

layer four - arpeggio Cadences

Learn the arpeggios for the bVIm(ma7) - bII9 - I (or Im) cadence. For a “C” target chord, this is Abm(ma7) - Db9 to Cma7, C7 or Cm7.

Elaborate on the cadences with neighboring and passing scale tones. Study [Harmonic Clusters](#) in the [Phrases Build With Core Melody, Cell Elaboration and Filler](#) chapter and [Harmonic Clusters in the Double Stops](#) chapter. Take a look at melodic minor scale-tone seventh chords, especially the [Melodic Minor Scale-Tone Seventh Chords](#) in the chapter on [Scale-Tone Seventh Chord Progression](#).

Descending five and seven of the Im(ma7) in melodic minor becomes IV7. These are respectively used for bVIm(ma7) and bII7 in the key of the target chord. Descending only the seven becomes IV9, no root in melodic minor (bII9 no root in the key of the target). See [descend five and seven](#) and [descend seven](#).

Super Locrian in Four Layers

layer one - half/whole/half

Of course, all of the melodic minor modes have these same scalar intervals, but super Locrian feels most like a seven tone scale. Aeolian flat five has more of a relation to the IVm7b5 chord and IVm7/11b5 pentatonic scale and Lydian dominant has more of a harmonic relation to the bII13#11 chord.

The half whole half sequence has a distinct jazz/middle eastern feeling.

The fingering for super Locrian is half-whole-half steps, followed by five notes each a whole step apart from its neighbor. The formula for super Locrian is 1, b2, b3, b4, b5, b6, b7. Thinking of flat four as natural three, there is a note a half step above the tone center ("b2" is a half step above "1") and a note a half step below three (b3 is a half step below b4, which is 3). From three ("b4") up to one, it is five notes in whole steps: 3, b5, b6, b7 and 1. On a single string, it looks like this (from the players perspective, looking down at their own guitar):

The half/whole-half part of the scale is common to harmonic minor (7-1,-2-b3), melodic minor (also 7-1-2-b3) the hybrid Aeolian harmonic minor (7-b7-b6-5) and two instances in melodic minor resolving to a target chord.

Both of these melodic minor instances descend a half step, then a whole step. One instance starts on b6 of the target makes a half/whole/half sequence if it resolves on down to the major third of the target. In "C", this is the note sequence "Ab-G- F-E". The other instance works on any target chord with a perfect fifth. In "C" the second instance is "Cb("B")-Bb-Ab-G".

layer two - five notes in whole steps

The five tones in whole steps sound sort of wacky/weird, like the [whole tone scale](#). (see also [Emotive Qualities of Chords and Scales](#)/Chord Qualities Expressed by Scales/Whole Tone Scale). The whole tone scale divides the octave into six equal intervals of a whole step. Melodic minor has five of the six notes in the whole tone scale. That portion of melodic minor can get the same wacky/weird sound.

layer three - think super Locrian in connecting bII#11 tones

Use the middle-eastern half/whole/half and the wacky whole step regions of the super Locrian scale to connect tones of the bII#11 chord.

layer four - use clusters of tones from altered V chords

Arpeggiate altered V chords, not only in terms of the notes of a held chord, but also thinking of chord tones on a single string, especially V chord tones #9 - b9 resolving to the fifth of the target (Bb-Ab-G for a C target chord) and V chord tones #5 - b5 resolving to the root of the target (Eb-Db to C for a C target).

THE BEST WAY TO LEARN

The best way to learn is to teach someone else in an interactive manner. The Greek Socrates used a constructive method of argument through question and answer dialog and assumed he always need to learn more and knew nothing (in an absolute sense. This manner of communicating is called the Socratic method.

Usually, the worst way to learn is to listen to a lecture.

TABLATURE AND CHORD DIAGRAMS

Does the top horizontal line on tablature represent the largest or smallest string? Which string is shown on the top line in tablature? Answer: the first and smallest string. See [Reading Tablature](#).

What do the numbers in the white space between the tablature and standard music notation indicate? Answer: fretting finger numbers, where index, middle, ring and little finger are respectively “1-2-3-4”. See [Reading Tablature](#).

What do the vertical lines on chord diagrams indicate, strings or frets? Answer: strings. Does the very top horizontal line on a chord diagram indicate the nut (the plastic or bone slotted piece that the strings rest on on the head of the guitar) or the first fret? Answer: the nut, unless a roman numeral is shown above the upper left of the chord diagram. The roman number sound indicate the fret number shown by the *next-to-top line* on the diagram. See [Reading Fretboard Diagrams](#).

If you play a note without fretting the string, it called an “open string” and the string vibrates to the nut. In tablature, should such a note be numbered “0” or “1”?

We press strings onto the narrow metal frets that are hammered into the fingerboard in order to vary the pitch of notes by changing the vibrating string length. We call the space between each pair of consecutive frets a “fret”, when it is actually a “fretting space”. Which fretting space is between the third and second fret? Answer: the third fret (or fretting space).

What do the numbers on the fretboard diagrams indicate?

For fretboard diagrams or tablature, which is the number for the index finger?

On a chord diagram, what does a small circle above the nut indicate? Large circles on my diagrams indicate the note that names the chord, which is sometimes a reference note not played. Notes shown by the large circles always share the same note name.

What does it mean when a string on a chord diagram has no number on it?

What are some things you can do to make sure a string does not sound?

MAJOR SCALES, KEY SIGNATURES AND MODES

Natural Notes, Sharps and Flats

How many unique letters are used in music. Answer: seven (A-B-C-D-E-F-G). Without modification, these lettered notes are called *natural notes*. Sharps and flats modify the natural notes. Which two pairs of natural notes are a half step (one fret apart, with no fret between them)? Answer E-F and B-C. What is the interval of the remaining pairs of notes alphabetically including G to A, where the musical alphabet starts over? Answer: a whole step (two frets, with an “empty fret” between them/).

How does a sharp modify a natural note? Answer: it raises its pitch by a half step, moving it one fret toward the body of the guitar.

How does a flat modify a natural note? Answer: it lowers its pitch by a half step, moving it one fret toward the head of the guitar.

Major Scales

How many unique tones are there in a single major scale by note name or by note number (A-B-C-D-E-F-G or 1-2-3-4-5-6-7)? Answer: seven.

In alphabetical order, most tones of a major scale are two frets apart (called a *whole step*), having one “empty fret” between them. There are two exceptions where the tones are one fret apart (called a *half step*), having no fret between them. In alphabetical order, each tone to the next is either a half step (one fret) or a whole step (two frets). Which numbered tones in a major scale are a half step apart? Answer: three to four and seven to eight (eight is where one reoccurs in the next higher octave).

How many unique major scales are there by pitch? Answer: twelve. How many major scales are there by name? Answer fifteen, Why are there more by name than by pitch? Answer: because of enharmonic names (synonym key names). F# and Gb major scales have the same pitch. C# and Db major scales have the same pitch. Cb and B major scales have the same pitch. Hypothetically, there are additional enharmonics with double flats and double sharps like G# major with the notes G#-A#-B#-C#-D#-E# and F## (F double sharp).

What is the purpose of sharps and flats in regard to major scales? Answer: They adjust the letter-to-letter intervals from each major scale tone to the next to preserve the rule that each tone ascends to the next by a whole step except three to four and seven to eight are each a half step. Why is C major the only key with no sharps nor flats? Because in C major, three to four are E-F, already a half step and seven to eight are B-C already half step.

Why is the B note flat in the key of F? Answer: to make the interval from three (A) to four (Bb) a half step and to make the interval from four (Bb) to five (C) a whole step.

Why is the F note sharp in the key of G? Answer: to make the interval from six (E) to seven (F#) a whole step and to make the interval from seven (F#) to eight (G) a half step.

Key Signatures

See: [Key Signatures](#).

the purpose of key signatures

What is the purpose of key signatures? Answer: to provide an organization of the sharp and flat compensations that conform all major scales to the rule that each numbered tone ascends to the next by whole step except three to four and seven to eight are a half step.

the accumulative orders of sharps and flats

The key signatures for most major scales conform to an accumulate order of sharps or flats. Which are the two exceptional major scales which don't conform to an accumulative order of sharps or flats and have to be memorized instead of using the rules below regarding sharp keys and flat keys? Answer: C major, which has no sharps nor flats and F major which has one flat, Bb.

What is the accumulative order of sharps in key signatures? Answer: F#-C#-G#-D#-A#-E#-B#.

How to you decode a key signature with sharps to name the major scale? Answer: raise the pitch of the last sharp in the key signature a half step. G major's key signature is "F#" and raising it's last (and only) sharp (F#) a half step produces "G". D major's key signature is "F#-C#" and raising it's last sharp (F#) (C#) a half step produces "D".

What is the accumulative order of flats in key signatures? Answer: Bb-Eb-Ab-Db-Gb-Cb-Fb.

decode a key signature to name the major scale

How to you decode a flat key signature to name the major scale? Answer: the name of the key is the literal name of the next to last flat. Bb major's key signature is "Bb-Eb" and its next-to-last flat is the key name "Bb". Eb major's key signature is "Bb-Eb-Ab" and its next-to-last flat is the key name "Eb".

conceive a key signature from the notes in a major scale

How can you conceive a key signature from the note names in a major scale? Answer: C major and F major must be memorized. For sharp keys, collect the sharps, put them in the order F#-C#-G#-D#-A#-E#-B# (whatever part of it they may use) and raise the last sharp a half step. For flat keys, collect

the flats, put them in the order Bb-Eb-Ab-Db-Gb-Cb-Fb (whatever part of it they may use) and name the key after the next-to-last flat.

relative minor according to the key signature

Each major key has a relative minor key with the same notes. How can you determine the relative minor key? Answer: once you determine the major key, the relative minor is on its sixth step. Count down two scale tones, from “one” to “seven” to “six”. Go down two letters alphabetically and conform to the key signature. For “A” major, for example, go down two letters to “F” and remember to follow the A major key signature (F#-C#-G#) and determine the relative minor as F# minor.

Modes of Four Heptatonic Scales

What is a mode? Answer: one of the synonym scales created by using one of the tones of the scale as the key or focal point. For most scales, a different mood or mode is created on each scale tone.

See: [Modes](#).

What is a heptatonic scale? Answer; a seven-tone scale, usually made with step-to-step intervals of half steps (one fret, with no note between), whole steps (two-frets, with an “empty fret” between) and more rarely minor third intervals (three frets, with two “empty frets” between).

What is a “harmonize-able” heptatonic scale? Answer: it is one of only four heptaonic scales that can produce chords on each scale step by combining three or more notes in an every-other-note pattern (thirds).

four harmonize-able heptatonic scales

What are the four harmonize-able heptatonic scales? Answer: major, harmonic minor, melodic minor and harmonic major. Traditionally, melodic minor is major scale flat three ascending and Aeolian (major scale flat 3, 6 and 7 descending. This course refers to the jazz and modern version of melodic minor that is major flat three ascending and descending.

What is a mode formula? Answer: it is a set of seven numbers that represent the comparison between a chord, scale or melody. C major scale is 1-2-3-4-5-6-7 and has all natural notes (C-D-E-F-G-A-B). C Mixolydian, by comparison has a “Bb” note instead of a “B”, so the formula for Mixolydian is 1-2-3-4-5-6-b7.

What are the names of the modes built on a major scale? Answer: modes 1-2-3-4-5-6-7 are respectively major (Ionian)-Dorian-Phrygian-Lydian-Mixolydian-Aeolian and Locrian. In order with the traditional Roman-numbered tone on which they are built, they are I major (Ionian), II Dorian, III Phrygian, IV Lydian, V Mixolydian, VI Aeolian and VII Locrian

How can you figure out the modes built on each of the steps of the other three harmonize-able heptatonic scales? Answer: (1) Conceive harmonic minor as major scale sharp five and harmonic minor will be

the mode on its sixth step; (2) conceive melodic minor as major scale flat three; (3) conceive harmonic major as major scale flat six; (4) use a descending number series in comparing each mode side-by-side with a major scale mode on the same numbered scale tone as shown in the table below.

What is the descending number series in harmonize-able heptatonic modes other than major? Answer: In major sharp five, the descending number series is #5-#4-natural 3-#2-#1-natural 7-natural 6. In melodic minor (major flat three), the descending number series is b3-b2-flat one-b7-b6-b5-b4. In harmonic major (major flat six), the descending number series is b6-b5-b4-b3-b2-flat one.

The color codes are:

major	minor	dominant	diminished	augmented
-------	-------	----------	------------	-----------

How can I identify one of the twenty eight modes of the four harmonize-able heptatonic scales from a collection of seven notes? Answer if it is one of the twenty eight modes, first identify the triad and dominant basis as shown by the colors on the table above. Then narrow it down by the remaining formula. **Major triad basis:** major, Lydian, major b6. **Minor triad basis:** Dorian, Phrygian, Aeolian, melodic minor (major b3), Dorian b2 and Lydian b3 (Lydian diminished). **Dominant seventh basis:** Mixolydian, Phrygian b3 (Phrygian dominant), Lydian b7 (Lydian dominant), Mixolydian b6, Phrygian b4 (super Phrygian) and Mixolydian b2. **Diminished triad basis:** Locrian, Mixolydian #1, Locrian natural 6, Aeolian b5, Dorian flat five and Locrian bb7 (double-flat seven). **Augmented triad basis:**

major #5, Phrygian flat one, Locrian b4 (super Locrian) and Aeolian flat one.

CHORDS AND CHORD PROGRESSION BASICS

The Basics of Chords and Chord Construction

Alphabetically, which notes are one fret apart? (Answer: [full-fretboard natural notes](#)).

What are the letter names of the notes on the fifth, tenth and twelfth frets, from sixth through first? Answers: [full-fretboard natural notes](#).

What is a chord root, semantically (according to the letter in the chord name) and aurally (the aural definition involves the imagination)? Answer: [chord roots](#).

Barre chords are typically formed by using the index finger as a virtual nut (or virtual capo) by barreing all the strings and forming virtual open position chords with the three remaining fingers. Give an example. Answer: [basic barre and power chords](#).

Demonstrate a major and minor barre chord rooted on the sixth string. Demonstrate a major and minor chord rooted on the fifth string. Answer: [basic barre and power chords](#).

The chords you demonstrated above use a design based on open position chords, named after their letter and have a root on one of the three bass strings in relatively the same location (same string and same fret above the “virtual nut” you make with the barre). Demonstrate E, A, C, G and D form major barre chords, being aware that D, A and G open position chords have an “empty” first fret. Answer: [Major Chords in Five Octave Shapes](#). See also: [Octave Shapes and Major Arpeggios](#).

How many different notes does a triad have? A quadrad? A pentad? A sextad? A heptad? Answers: a triad has three different notes, a quarad has four different notes, a pentad has five, a sextad has six and a heptad has seven.

What is the primary method of constructing triads with the major scale? Answer: every other note, called *thirds*. See [chord construction](#).

What is the order of major scale-tone numbers and letters in thirds (the tertian cycle)? Hint: use groups of odd and even numbers. Answer: [number and letter cycles](#).

What is the significance of the numbers 1-3-5 Answer: [chord construction](#)?

What are the numbered tones in the key of the chord root for major, minor? Answer: [triads](#).

Demonstrate Em, Am, Dm, Gm and Cm form minor barre chords. Answer: [Minor Chords In Five Octave Shapes](#).

What number does suspended 4 and suspended 2 replace in a major or minor triad? Answer: in a major triad, suspended 4 and suspended 2 replace 3 and in a minor triad, suspended 4 and suspended 2 replace a flat three.

Key Scale, Parent and Chord Scale

See [Key Scales, Parent Scales and Chord Scales/Key Scale, Parent Scale and Chord Scale](#).

key

What does that mean a song is said to be in a key? Answer: It means there is a main note that is the focal point of the whole piece of music. It can be defined in various ways, but a favorite is: “the root of the chord you would expect the piece to end on” (in a traditional sense, as in the common practice period of classical music from 1600 to 1900).

scale

What is a scale? A musical scale is a collection of two to twelve notes within the range of an octave, usually demonstrated by playing the notes up and down through the range of an octave. What are the most common numbers of notes in a scale? Answer: five-note pentatonic scales, seven-note heptatonic scales like major, Mixolydian, Dorian, Aeolian and harmonic minor and the twelve-note chromatic scale. See [Prime Scales, Chords and Arpeggios](#).

authentic and deceptive cadences

What is meant by “you would expect the piece to end on”? (Answer: That you expect the piece to end on a chord that sounds like a traditional ending. The classic tradition ending is the authentic cadence, as described below).

What is a cadence? (Answer: A cadence is a chord progression of two or three chords that establishes a key or temporary sense of key.)

What is an authentic cadence? (Answer: An authentic cadence sounds finished and progresses from a chord built on the fifth step of the key <G major> to one built on the first step <C major>).

What is a deceptive cadence? (Answer: A deceptive cadence can end on an unexpected chord, like ending on an “F” chord in the key of “C”. In a deceptive cadence, the melody usually ends on a note that is in the expected chord *and* in the alternate chord.)

What is an Escherian cadence? (Answer: a special kind of deceptive cadence. It seems to follow the logic of a traditional cadence, but uses an auditory illusion). See [Melodically Superimposed Cadences/Escherian Cadence](#).

Modes

What is relative major and minor? Answer: traditionally, a major tone center is on the first step of a major scale and the minor tone center is on the sixth step of a major scale and the relative major and minor relationship between them involves know the minor third (three frets, inclusively) interval between them. Using the C major scale, this would produce either C major or A Aeolian (also called A natural minor). A Aeolian is the *relative minor* of C major. Conversely, C major is the *relative major* of A Aeolian, although the term *relative major* is less common than relative minor. See [Establishing a Key/Relative Major and Minor Keys on Steps One and Six](#).

See [Modes/Modes: Alternative Tone Centers on a Scale](#).

What is a mode? Answer: Any tone of the major scale can be the key. To demonstrate that, seven examples are shown below, each using the notes of the C major scale, but each in a different key, with a key on each of the C major scale. The mode names originated in Greece. *Modus* means mood in Greek, so each mode represents its own mood.

All of these examples use the C major scale, but each one puts the focus or tone center on a particular note. D Dorian, for example, is the C major scale with the focus or tone center on "D".

table of modes of the C major scale

click the links below

to play an example

ascend or descend the notes in each row to sound the respective scale

C major (ionian)	C	D	E	F	G	A	B	C
D Dorian	D	E	F	G	A	B	C	D
E Phrygian	E	F	G	A	B	C	D	E
F Lydian	F	G	A	B	C	D	E	F
G Mixolydian	G	A	B	C	D	E	F	G
A Aeolian	A	B	C	D	E	F	G	A
B Locrian	B	C	D	E	F	G	A	B

Parent Scales, Key Scales and Chord Scales

See [Modes/Key Scale, Parent Scale and Chord Scale](#).

What are parent scales? Answer: A parent scale is the major scale (or other harmonize-able seven-tone scale) which is the origin of a key scale or chord scale. A *parent scale* is a reference scale from which a scale or mode was derived. Most commonly, a major scale is used as a parent scale. Any of the modes of the major scale would refer to that major scale (which was their source) as their parent scale. Other parent scales are *major #5*, *major b3* and *major b6*, each of which have seven modes like the major scale and are simple modifications of the major scale.

C major scale uses the notes C, D, E, F, G, A, B and C. Modes are constructed on each of the tones of the C major scale. In the chapter [Modes](#), the section [Discovering Major Scale Modes](#) demonstrates modes of the C major scale. Those modes all have the C major scale as their parent scale.

What are key scales? Answer: *Key scales* are named after the tone center. They may vary by type when used in a particular piece of music, but would have a tone center in common. A melody in the key of C may use C major, C Mixolydian and C Dorian. All three of these scales share the tone center, "C", so they would be *key scales* for the key of "C".

Do you have to know the key to determine a key scale. Answer: yes, otherwise there is no tone center as a point of reference to serve as "1".

What are chord scales?

What are the parent scale numbers in a II minor chord? (Answer: 2-4-6). What are the chord scale numbers in a II minor chord? Answer: 1-b3-5.

What are the parent scale and chord scale numbers in a III^m chord? Answer: The parent scale numbers are 3-5-7 and the chord scale numbers are 1-b3-5.

What are the parent scale and chord scale numbers in a IV major chord? Answer: The parent scale numbers are 4-6-1 and the chord scale numbers are 1-3-5.

What are the parent scale numbers in a IV minor chord? Answer: The parent scale numbers are 4-b6-1 and the chord scale numbers are 1-b3-5.

What are the numbers in a VI major chord? Answer: The parent scale numbers are 6-#1-3 and the chord scale numbers are 1-3-5.

What are the numbered tones for an add 9 chord in the key of the chord root? Answer: 1-2-3-5, where 2=9.

Demonstrate **major and minor triads built on steps one through six of C major and G major.**

Play the following progressions in C, G, D, A, E, Gb, Db, Ab and in Eb. For each key, name the chords by letter and quality: I-IV-V-I, I-V-IV-I, V-IV-I-V, I-VIm-IV-V, I-V-VIm-IV, I-VIm-IIImV and I-VIm-IV-V. Use open position chords whenever you can for now.

C and G major chords on steps one through six

key	I major	II minor	III minor	III major	IV major	V major	VI minor
C major	C I	Dm I	Em I	E I	F I	G I	Am I
G major	G I	Am I	Bm I	B7 I	C I	D I	Em I

VOICE LEADING AND CADENCES

What is that name for individual musical parts in an arrangement that is analogous to singers? Answer: “Voice”.

The Quartet as a Model for Ensembles

What are the names of the four voices in a vocal quartet? Answer: Soprano, alto, tenor, bass, from highest to lowest pitch.

When chords have more than four different notes, some notes are omitted to keep four as the total number of notes. What is the rule regarding which voices should *not* be omitted? Answer: Include the third, the seventh (if involved) and any note mentioned in the chord name. See [Chord Naming Conventions/Preferred Chord Tones](#).

If you were to choose one note from each chord in a series of four-note chords, what would be the assignment of the soprano, alto, tenor and bass voices? Answer: The soprano would be the top voice, alto next-to-top, baritone next-to-lowest and bass lowest.

What are the respective names for vocal ensembles of two through ten voices? Answer: Duet, trio, quartet, quintet, sextet, septet, octet, nonet and dectet.

How do you assign the soprano, alto, tenor and bass voices for duets or trios? Answer: You choose two of the four voices for a duet or three of the four voices for a trio.

How do you assign the soprano, alto, tenor and bass voices for ensembles of five or more voices? Answer: You double voices, sometimes in a different octave.

What are the roles of voices as melody and harmony (which voices are the melody and harmony)? Answer: Usually one of the voices is the focal point and is considered the melody and the remaining voices are harmonies.

Is there ever two melodies in a four-voice arrangement? Answer: Sometimes, two of the voices move in parallel thirds (each lower note of a voice accompanied by a note in an upper voice two scale tones higher, such as “A” below and “C” above) In this case of parallel thirds, both voices could be considered melody or one of them could be more strongly emphasized to assign it as the melody.

Which voice is the melody? Answer: The important voice (melody) is most commonly in the soprano (lead vocal, lead guitar etc.), but often in the bass (Jaco Pastorius, Ron Carter, Jack Cassidy, Geddy Lee, Paul McCartney). In traditional jazz ensembles the trumpet player is typically the melody player and the band leader (Louis Armstrong, Miles Davis, Dizzy Gillespie, Wynton Marsalis). Improvising trombone players often provide a strong secondary melody, especially in New Orleans. Check out this [Freddie Lonzo video](#).

Voice Leading and Counterpoint

What is voice leading? Answer: Any particular voice may move up or down or stay on the same note (if available) as the ensemble moves on to the next chord. The design of this succession of notes in a particular voice is *voice leading* and it results in a melodic line.

What is counterpoint? Answer: The combined design of the movement of all the voices.

How many types of counterpoint are there? Answer: There are five types of counterpoint, called *species*.

What are the five species of counterpoint? Answer: The first species is similar to what was described above, with the one note at a time in each voice, making a four-note harmony. In counterpoint, chord tones predominate, but passing and neighboring tones are used in addition to chord tones. Though there may be use of non-chordal tones in counterpoint, it's best to first conceive the simplest core melody with one note per chord. Second species counterpoint involves two notes in one or more voices during one note in the remaining voices. Third species counterpoint pits four notes against one, fourth species has the notes offset in time and fifth species mixes the other species in a free-form manner.

Which of the voices should use a simpler melodic line and which voices can be more complex? Answer: The less important voices (the harmony voices) should move by smaller intervals with regular rhythm and other predictable characteristics. Since the more important voices are the main focus for the listener, the more important voices can take more liberties with larger intervals, more complex rhythm and other elements that require more attention by the listener.

Should the range of pitch differ between the voices? Answer: Yes, Larger intervals should be used in the bass (in the low range of pitch) and smaller intervals in the treble (high range of pitch).

Target and Setup Chords

See the chapter [Melodically Superimposed Cadences/Target Chords](#) and [Setup Chords](#).

What are target chords? Answer: Target chords establish a sense of key, a tonal focal point and the feeling that ending on a target chord would sound final and complete. A target chord may be the tonic chord of the key (Am in the key of Am) or a chord establishing a temporary key using any significant chord with a duration of a bar or more.

What are setup chords? Answer: A setup chord is the last chord in a cadence before the target or tonic chord (or temporary tonic chord). See the chapter [Melodically Superimposed Cadences/Superimposed Cadence Voice Leading](#).

Cadences

What are cadences? Answer: Cadences are chord progressions, usually of two, three or four chords, are used to establish a key or temporary key. In each genre, listeners are familiar with certain cadences. “II-V-I”, for example is the basis of jazz chord progression and is common in other popular styles. In C major “II-V-I” is Dm7-G7-Cma7. In C minor, it is Dm7b5-G7-Cm7.

In improvising or composing melody, how do you represent setup chords and target chords? Answer: immediately before a target chord, you can represent a setup chord with an arpeggio, a decorated arpeggio (with scale-tone or chromatic neighbors) or with a pentatonic scale named after the setup chord.

What intervals are commonly used from setup chord root to target chord root? Answer: Stepwise, fourths, fifths or chromatic.

authentic (perfect) cadence and secondary dominant

What is the name of the cadence when the setup chord is a V chord (the dominant chord) of the key and the target chord is the I chord of the key (the tonic chord)? Answer: The authentic or perfect cadence.

What is secondary dominant? Answer: A secondary dominant is a major or seventh (dominant type) setup chord with its root on the fifth of the target chord, where the root of the setup chord moves up a perfect fourth (a five fret interval, like frets 3 to 8) to the root of the target chord.

Any chord with a duration of a few beats and with a temporary tonality can be a target chord. Preceding the target chord with a V of it is a secondary dominant. See the chapter [Secondary Dominant](#).

The *authentic* cadence is V-I. In a cadence to the chord C7 with Dm7-G7-C7, “C7” is the tonic chord. In the key of C, establishing “F7” as a temporary tonic, Gm7-C7-F7 could be used as a II-V-I cadence to the temporary key of F using a C7 as a secondary dominant.

An authentic cadence is a V setup chord to a I target chord but is always with the target as “I”. “I” could be called the “primary dominant.”

What chord qualities can be used for a secondary dominant? Answer: Usually, major or dominant seventh (1-3-5-b7). To make the cadence from the secondary dominant to the target chord more dramatic, it can be an altered seventh chord with optional sharp or flat five; sharp or flat nine.

When using a secondary dominant, is there any restriction as to the quality of the target chord? Answer: It is preferred that the target chord has a perfect fifth, implying a major, minor or suspended triad basis. A 7sus4 chord, for example has a sus 4 triad basis.

Can chord qualities of setup chord other than major and dominant be used to progress up a perfect fourth to a target chord root? Answer: Yes. The cadence would be less dramatic than with a major or dominant setup chord.

stepwise: upper or lower neighbor

What are examples of stepwise cadences? Answer: VII dim to I or IIm to I; Ima to IIm or IIIIm to IIm. The setup chord may have its root a scale tone above or below the target (G major or B diminished in the C major scale setting).

chromatic

What are examples of chromatic cadences? Answer: A sequence of chords that harmonizes a bass line involving chromatics, including these:

desc dim	I7 Idim7 IImb7b5 I (IIm7b5=IVm6)
1#125	I #Idim7 IIm V
1b325I	I bIIIdim7 IIm V
1#12#23	I #Idim7 IIm #IIdim7 IIIIm or I #Idim7 IIm #IIdim7 I/3
12#23	I IIm #IIdim7 IIIIm
134#45	I-I/3-IV-#IVdim7-V or I-I/3-IV-#IVdim7-I/5
3b325	IIIIm bIIIdim IIm V
4#41	IV #IVdim7 I

flat five substitute (tritone substitute) cadence

What is a flat five substitute cadence (also called a tritone substitute)? Answer: A flat five substitute for the authentic cadence is bII-I. Instead of progressing V-I (root up a fourth), it is bII-I (root down a half step. Using flat five substitutes makes chord root progression chromatic. VI-II-V-I becomes bIII-II-bII-I. See [“Substitution”/Flat Five Substitute](#) and see [“Melodically Superimposed Cadences”/Superimposed Cadence Voice Leading, Chromatic Chord Progression](#) and [flat five substitute chord progression](#).

plagal cadence (“amen” cadence)

What is a plagal cadence? Answer: Rather than the authentic V-I cadence, The plagal or “amen” cadence is IV-I. It cadences down in a perfect fourth, instead of up a perfect fourth. Perfect fourths are two and one half steps and are equivalent to the interval from the first to the fourth step of a major scale, or any pair in the series 4-1-5-2-6-3-7-#4-#1, etc.

minor plagal cadence

What is the minor plagal cadence? Answer: The minor plagal cadence is IVm-I. It sounds reverent, like the plagal cadence, but with a touch of sadness.

multiple plagal cadences

Can plagal cadences be used in a repeated manner, where each chord is the IV of the chord it precedes? Answer: Yes. Double, triple and quadruple plagal cadences have been used in pop music.

Multiple plagal cadences in the key of E (the links below go to Spotify playlists in various keys):

- ✦ [double plagal](#): D-A-E
- ✦ [triple plagal](#): G-D-A-E
- ✦ [quadruple plagal](#): C-G-D-A-E

What is a double plagal cadence? Answer: bVII-IV-I (Bb-F-C). With all major chords, each chord root is a perfect fourth above the next chord root. IV (F) is a perfect fourth above I (C), and in turn bVII (Bb) is a perfect fourth above IV (F).

What is a triple plagal cadence? Answer: bIII-bVII-IV-I. Examples are Comfortably Numb, Fly Away, Jumpin' Jack Flash, Old Man, Maybe I'm Amazed, Summer Breeze.

What is a quadruple plagal cadence? bVI-bIII-bVII-IV-I (C-G-D-A-E), such as Crazy (Seal), Day In The Life (or the "aah" middle section), Here Comes the Sun, Hey Joe, Hush (Joe South, popularized by Deep Purple).

half cadence (British: imperfect cadence)

What is a half cadence? Answer: In a half cadence, I, II, IV or VI progresses to V, sounding incomplete. It ends with the target chord on V. It is usually following by another cadence that does resolve to the tonic I chord, like an authentic cadence.

deceptive cadence

What is a deceptive cadence? Answer: Although the listener expects a song to end on the tonic chord, it doesn't have to. A song can end with a deceptive cadence, where the final chord is not the tonic chord. See [Establishing a Key/authentic and deceptive cadences](#).

Escherian cadence

What is an Escherian cadence? An Escherian cadence is a special kind of deceptive cadence. Maurits Cornelis Escher's drawings displayed relationships in perspective that defy logic. Each element seems to make sense in its own right, but shouldn't co-exist with related elements. Look at his art at www.mcescher.com, especially "Waterfall", "Ascending and Descending" and "Belevedere".

Like Escher's art, music can suggest one thing and do another, leading you along a path of audio logic that may take an unexpected turn. A chord progression can suggest movement to a particular chord

and go to another that uses a different mode or that contains the expected chord, but with a different root.

Expert magicians, like expert improvising musicians and composers are clever at distracting the audience while introducing something unexpected. A magician may distract you with one hand while sneaking something with the other. An improvising musician may use a familiar melodic phrase and by changing the right note, use the notes that will introduce an unexpected chord or key.

An Escherian cadence is a resolving chord progression that suggests a resolution to a particular mode then resolves to another. It may do this by resolving to a different mode of the same key, or to a chord that includes the implied chord, but has a different root, such as suggesting Am and resolving to Fma7, which contains Am.

CHORD PROGRESSION TYPES

COMPING RHYTHMS

Read [Accents](#) and [Varying Rhythms](#).

What is a push? (aural answer: [accent three](#), then [push three](#)).

What is a rest push (punchy) versus a sustain push (smooth)? Which would be typical of bossa nova and which typical of James Brown?

What is a pickup? (aural answer: [accent three](#), then [pickup to three](#)).

The three mathematical operations in musical rhythm: halving/doubling, dotting and tuplets.

Swing eighths use tuplets. They play on the first and third of three parts and can vocalized by saying “bah um bah” on each beat, spaced very evenly. Demonstrate. Next, sing “bah um bah” repeatedly on each beat and “fade out” the “um’s”. You should begin to hear the familiar swing rhythm that you have heard in blues. (aural answer: [swing eighths](#)).

The Charleston comping rhythm is in swing eighths and is two half notes with a push to the second half note. Demonstrate. (aural answer: [Charleston comping rhythm in swing eighths](#)).

Counting “1 + 2 + 3 + 4 +” perfectly even, clap a straight eighths version of the Charleston comping rhythm. (aural answer: [Charleston comping rhythm in straight eighths](#)).

Rhythmic “hits” are thematic accents placed at (metronomic) locations in time. The “back beat” is hits on beats two and four in 4/4 time. Count “one two three four” and clap on two and four to demonstrate. (answer: [back beat](#)).

Another way to vary a rhythm is to add a hit to an empty beat. Demonstrate adding a hit to the empty beat four in the Charleston comping rhythm, which makes the “Blues By Five” comping rhythm. (aural answers: [Charleston comping rhythm in swing eighths](#), [Charleston add four in swing eighths](#), [Charleston in straight eighths](#), [Charleston add four in straight eighths](#)).

JAZZ THEORY

What are the formulas (numbered tones in the key of the chord root) for major, minor, diminished, suspended fourth, suspended second and augmented chords? (answer: [triads](#))

Do you need to know triad names to understand larger chord names? (answer: [triad names in larger](#))

What are the three ways a chord name indicates b3? (answer: [thirds](#))

What does “7” (or 9, 11 or 13) indicate in a chord name? (answer: [sevenths, ninths, elevenths and thirteenths](#)). How would a chord name indicate two other versions of the number seven? (answer: [sevenths, ninths, elevenths and thirteenths](#))

What are the three ways to indicate the numbered tone b5 in a chord name? (answer: [altered fifths](#)). What are the three ways for a #5? (answer: [altered fifths](#)).

How many notes are in an eleventh chord? (answer: see the [major scale-tone chords by type](#) table)

Can the first number after the letter name in a chord name indicate more than one number? (answer: [sevenths, ninths, elevenths and thirteenths](#)).

Do secondary numbers after the letter names (such as the “b9” in “C7b9” or the “#5” and “#9” in “C7#5#9”) indicate more than one note for each number? (answer: [numbers after the letter name](#))

How many notes are in 9sus4? (answer: [chord formulas, suspended fourths](#)).

What are [parent scales, key scales and chord scales](#)?

Describe the method of figuring out a secondary root seventh chord (tertian quadrad) on the third of a ninth chord in numbers, using the parent scale (use the quality of the seventh chord on the third of the ninth chord)?

What number would you subtract from chord tones 9 through 13 to get the lower octave equivalents?

See [Modes / Modes Of Four Heptatonic Scales](#).

What are [key scales, parent scales and chord scales](#)?

What are the parent scales for C7, F7 and G7? (answer: [Modes On I-IV-V Blues](#)).

What are key scales for C7-F7-G7 for a blues in C (name the modes each of their parent scales in terms of the note “C”)?

What are the qualities of the tertian triads (three note chords built in thirds) and tertian quadrads (four-note seventh chords built in thirds) of each of the four usable heptatonic scales: major scale, major

sharp five scale (harmonic minor built on its sixth step), melodic minor scale, major flat six (harmonic major)?

What are the names of the largest acceptable chord and acceptable add tones (2, 4 and 6) on each of the seven steps of the each of the four usable heptatonic scales), excluding suspended chords?

What are the numbered tones of a V7 in terms of the parent scale? What would those numbers be without the root? Which numbered tone of the parent scale (5, 7, 2 or 4) is the third of a V7 chord? What is the numbers of the tones in a triad built on the third of the V7 chord? Is there any numerical difference (in terms of its parent scale) between the numbered tones of a triad built on the third of a V7 chord and the same V7 chord without a root?

What is the nature of the descending number in formulas that occurs in the ascending consecutive order of modes of major sharp five, melodic minor and major b6 (harmonic major)? (answer: see the “mode” row at the top of the table for each scale in [Modes Of Four Heptatonic Scales](#)).

Playing Mr. P.C. in the key of Cm, the Cm7 and Fm7 chords use an Eb major parent scale. What is the key scale for Cm7? What is the key scale for Fm7? What is the chord scale Fm7?

Playing Mr. P.C. in the key of Cm, the Ab13#11 parent scale is Eb melodic minor. What is the key scale for Ab13#11? In the same key of Cm, the G7b13 chord's parent scale is Eb major sharp five. What is the key scale for G7b13? What is another name for C Aeolian natural seven? (Answer: C harmonic minor).

How many notes are in G7b13? What is the lower-octave equivalent of b13? Does G7b3 effectively have two versions of a fifth?

What are the names of the largest acceptable chord and acceptable add tones on each of the seven steps of the major sharp five scale (harmonic minor will be constructed on its six), excluding suspended chords?

Answers To Jazz Theory

Yes, triad names are commonly the prefix immediately after a letter name and imply all the notes that the triad names as the basis of the larger chord.

HARMONY

Thirds are constructed by combining two notes in a major scale, usually sounded together What is the number of consecutive tones included in a scale-tone third?...in a scale-tone sixth?

What is the method of building thirds on the major scale? See *Heptatonic Thirds and Sixths and Thirds as Subsets of Major Scale-Tone Chords.pdf*

On which steps of the major scale do major thirds (above) occur? (Answer: one, four and five).

When you invert thirds by putting the lower note up an octave or the upper note down an octave, they become sixths. What happens to the qualities when thirds are inverted to sixths (major and minor)? (Implied answer: Major seconds, thirds, sixths and sevenths are named so because the upper note in each case is in a major scale named after the lower. A minor sixth would use a flatted version of the sixth step of the scale named after the lower note.)

BEING IN A BAND

General

How cool is it being in a band? ([being in a band answer](#)).

Are band politics like national politics? ([national politics ansswer](#)).

What lasts longer, a band or a marriage? ([marriage question](#)).

What do you get when you drop a piano down a mine shaft? ([mine shaft answer](#)).

Being A Guitarist

How many guitar players does it take to screw in a light bulb? ([light bulb answer](#)).

How do you get a guitar player to turn his volume down? ([volume down answer](#)).

Did you hear about the guitarist that was in tune? ([guitarist in tune answer](#)).

Why did the guitar player put drumsticks on his dashboard? ([drumsticks answer](#)).

What do you call a guitarist that breaks up with his girlfriend? ([breakup answer](#)).

What do you say to a guitarist in a three-piece suit? ([three piece suit answer](#)).

What's the difference between a guitarist and a savings bond? ([savings bond answer](#)).

How do you make a guitarists eyes light up? ([eyes light up answer](#)).

What's the parent's response to "When I grow up I want to be a guitar player!"? ([grow up answer](#)).

How can you tell if the stage is level? ([level stage answer](#)).

Answers To Being In A Band

general

Good question.

Yes, like national politics, band they are much healthier when they are democratically run.

A flat minor.

Only as cool as you are humble.

being a guitarist

Neither have I.

Homeless.

Now son, you can't do both.

Shine a flashlight in his ear.

Put some sheet music in front of him.

When the guitar player is drooling out of both sides of his mouth.

Eventually a savings bond will mature and earn money.

Will the defendant please rise.

So he could park in the handicap spot.

One to change it and a bunch more to say "I could do better than that".

PLAYING PARTS IN A BAND

notable ideas

See [Compatibility Of Parts](#), [Theme And Variation](#).

When is a musical part just “background”? (answer: [background part](#)).

How many significant musical ideas (that have to be thought about) can a listener typically understand at once? (answer: [how many musical ideas at once](#)).

What can we do to an arrangement when there are too many notable musical ideas going on at once? (answer: [too many parts solution](#)).

compatibility of parts

What is theme and variation? (answer: [theme and variation defined](#)).

In ensemble parts, is each part that makes of the ensemble on the same parts of the beats as another part? (answer: [parts of an ensemble and parts of the beat](#)).

What do different rhythmic levels have to do with making more parts understandable at once? (answer: [parts at different rhythmic levels](#)).

Playing Parts in a Band Answers

Usually only two or three.

When one musical part is at a different rhythmic level from another, such as one at two parts per beat and another at four parts per beat, it is easier for the listener to understand both at once. However, the relationship between the parts shouldn't be too complex. Four parts per beat in one part and three in another are challenging to hear at once, but can work if simple enough otherwise.

Combine some of the parts so they become a single idea with variation.

A duplication, elaboration or abbreviation of an existing part.

No, that's what makes them ensemble parts. Some parts of the ensemble are on different parts of the beats than others. They combine in a "gearlike" or "dovetail" fashion to make something more detailed.

When it doesn't require the listener's attention because it just keeps time or is something the listener is so familiar with they don't have to think about it.

TECHNIQUE

Playing Posture

Read [Playing Posture](#). Watch [Five Levels of Fretting Pressure](#).

What is the most common cause of stress, fatigue and injury for guitar players? (answer: [stress, fatigue and injury](#)).

Demonstrate five levels of fretting pressure. (answer: [Five Levels of Fretting Pressure](#)).

Demonstrate the posture for your upper body in playing guitar (answer: [upper body posture](#)).

What should the position of the head of the guitar be, in relation to the bridge? (answer: [head of guitar and bridge](#)).

How many degrees do I keep the neck in relation to the floor? (answer: [neck degrees to the floor](#)).

What is the rounded part of the guitar body for, where it curves in toward the middle of the guitar body? (answer: [rounded part of guitar body, curving toward middle](#)).

When sitting and playing the guitar, what should the relationship be between your knee and your hip? (answer: [knee and hip](#)).

When sitting and playing the guitar, should both feet be flat on the floor? (answer: [feet on floor](#)).

Is it okay to bend your fretting hand wrist? (answer: [bending fretting hand wrist](#)).

How far should you tilt the upper part of the guitar body back toward you? (answer: [tilt back upper part of guitar body](#)).

What part of the neck should you look at and how often? (answer: [look at neck](#)).

How far should the guitar be from your fretting hand shoulder? (answer: [distance from fretting hand shoulder](#)).

Should your fretting hand fingers be parallel to the frets. (answer: [finger angle to frets](#)).

Should sitting posture be much like standing posture? (answer: [sitting versus standing posture](#)).

How often should you take a break from sitting? (answer: [break from sitting](#)).

Fly Me to the Moon exercise

Using four-note seventh chords in, demonstrate these four steps:

1. Linear arpeggios stroke lengths of one half inch or less
2. Three-note seventh no fifth chords with bass (thumb) and two-note chords (index and middle)
3. Four note seventh chords in bass (thumb), mid (index), top (two high notes with middle and ring), mid (again).
4. Bass notes and three note chords

Technique Answers

You should avoid bending your fretting hand wrist and make it momentary when you do bend it.

Keep the lower back in its nearly straight, naturally-curved shape. Since you are reaching around in a circular manner (seen from an aerial view), your upper back is slightly rounded. The shoulders should not be forward of the clavicle by more than about a half inch.

No. Elevate your foot six to nine inches with a foot stool.

The knee should be the same height or slightly lower than your hip.

45°.

At least a five minute break every 20-30 minutes of playing. Stand and play if you like, for the break.

About one open-hand span.

Sitting posture should mimic standing posture in regard to the angle of the neck, distance from the fretting hand shoulder and distance tilting the guitar back from the imaginary vertical plane.

You should train yourself to only occasionally glance at the edge of the fretboard, so you can look at your audience or sheet music.

At least as high as the bridge.

About two to six inches.

Angled about 10°-20°, like a violinist.

To rest on your leg when sitting.

Tightening muscles that you don't need.

EQUIPMENT USE AND MAINTENANCE

picking up your guitar and setting it down

Is it okay to pick your guitar up by holding the strap? (answer: [pickup by strap](#)).

Should you lean your guitar against the wall or other vertical surface? (answer: [lean guitar](#)).

tone and volume control

The tone controls on a guitar are usually passive and don't have a built-in pre-amp. They always let the low (bass) frequencies go on to the amp, but attenuate the high (treble) frequencies the more you adjust the control to a lower number. So, you should think of the tone control as a *treble control*, since it only affects the treble.

Pickups closer to the neck produce more bass and pickups closer to the bridge produce more treble. Guitars with two or more pickups have a switch to select one or more pickups at a time. Turning the volume control down on a guitar usually decreases the treble a little along with decreasing the volume, unless the guitar has an uncommon *treble bleed circuit*.

How can you coarsely decrease the bass with your guitar pickup selection? (answer: [pickup select less bass](#)).

How can you discretely decrease the bass with your guitar volume controls on a guitar with two or more pickups and a volume control for each pickup (like a Gibson Les Paul, 335 or SG)? (answer: [pickup adjust less bass](#)).

Will adjusting your guitar's volume control affect the treble? (answer: [volume control and treble](#)).

guitar maintenance and adjustment

How should you tighten the nut on your guitar jack, if it becomes loose? (answer: [tighten nut on guitar jack](#)).

Should you adjust the trussrod yourself? (answer: [adjust trussrod](#)).

All of the following clearance issues require being able to fret every note on the guitar with reasonably hard picking without noticeable buzzing, including bent notes wherever you can. See [reasonable guitar specs](#).

What should the distance be between the twelfth fret and the sixth string? (answer: [twelfth fret clearance to sixth string](#)).

What should the distance be between the twelfth fret and the first string? (answer: [twelfth fret clearance to first string](#)).

What should the distance between the first fret and the sixth string be? (answer: [first fret clearance to sixth string](#)).

What should the distance between the first fret and the sixth string be? (answer: [first fret clearance to first string](#)).

While fretting the first and last frets at the same time (to create a “straight edge” with the string), what should the distance between the seventh fret and the sixth (largest) or first (smallest) string be? (answer: [seventh fret clearance](#)).

electrical connection to the amp

When the guitar is not making sound through the amp or the sound is intermittent, what is the path from the pickup to the speaker and how should I trouble-shoot it? (answer: [bad connection](#)).

Equipment Use and Maintenance Answers

You should usually take the mounting plate off (Fender) or remove the plate to access the electronics cavity (Les Paul, SG, Ibanez) and hold the guitar jack at its base while tightening the nut, so you don't spin the jack and break the wires loose.

The sum of the thickness of the sixth and fifth strings.

By choosing a pickup closer to the neck.

A distance equal to or less than the thickness of the third ("G") string.

Turning the volume down decreases the treble slightly, unless you have a treble bleed circuit, which is rare.

Ideally the same or less than the thickness of the second ("B") string or less. This can vary to as much as the thickness of the third string, but more will make the action (distance from the strings to the fretboard) too great for easy fretting.

The signal starts at the pickup goes to switches, then volume controls, then the jack, the guitar cable, finally the amp and its speaker. Go in that order. I've never had a pickup fail, only its connection.

First do something really basic: adjust the amp to your typical settings and see if you get sound by touching the tip of the guitar cable, plugged into the amp, not into the guitar. Don't touch the sleeve, only the tip. Touching the sleeve will ground out the signal and keep it quiet. If you hear a loud buzz when you touch the tip, that's a good sign. If so, proceed to check out the guitar (the following paragraphs). If you don't hear a loud buzz touching the tip, try another guitar cable, maybe the first one has a bad internal connection.

Start with the switches: change the pickup selection while sounding a chord on the guitar and see if the sound crackles. If it does, you can often flick the switch back and forth many times and the dirt and carbon will fall away from contacts in the switch and it will work properly. If not (and flicking the switch makes noise) try the correct kind of contact cleaner (see Dan Erlewine's book *How To Make Your Electric Guitar Play Great*). Sometimes switches fail and have to be replaced. Try everything else first, before going to a repair person (or changing it yourself if you know how).

Next the volume controls. Much the same as with a switch, if a volume control makes noise, you can rotate it many times to clean the contacts or use the correct kind of contact cleaner (see Dan Erlewine's book *How To Make Your Electric Guitar Play Great*). Sometimes volume controls (potentiometers) fail and have to be replaced. Try everything else first, before going to a repair person (or changing it yourself if you know how).

Is the guitar jack loose? If so, you should usually take the mounting plate off (Fender) or remove the plate to access the electronics cavity (Les Paul, SG, Ibanez) and hold the guitar jack at its base while tightening the nut, so you don't spin the jack and break the wires loose.

If you checked the cord first and touching the tip made sound you should have found some other problem by now. If not, double check all the steps. Still no?....get professional help.

It's usually better to use a guitar stand, guitar hanger, lean the guitar in a corner or pay someone to stand there and hold it for you.

The sum of the thickness of the fifth and fourth strings.

No! Pick the guitar up by the neck or body. A strap can come loose, especially when the guitar is not hanging from your shoulder by the strap.

Only if you're sure you know how. Get information in Dan Erlwine's book *How To Make Your Electric Guitar Play Great*. If you're not confident, take your guitar to a qualified repair person.

By having two or more pickups selected with the selector switch and turning the volume down on the one closer to the neck.

A distance equal to or less than the thickness of the fifth (next to largest) string.
